Presented 26th May, 1913.—*Mr. Kyte.....Not printed.*

222. Return to an Order of the House of the 17th February, 1913, for a copy of all letters, proposals, tenders, memoranda, papers and documents in the possession of the Department of Trade and Commerce, or any department of the Government, bearing date since 1st December, 1912, relating to steamship service between Canada and the West Indies. Presented 27th May, 1913.—*Mr. Maclean (Halifax).....Not printed.*

222*a*. Return to an Order of the House of the 2nd April, 1913, for a copy of all correspondence, petitions, letters, telegrams, and other documents in the Department of Trade and Commerce, or any department of the Government, relating to the SS. service,

CONTENTS OF VOLUME 28.—*Continued.*

between Mulgrave, County of Guysborough and Cheticamp, Inverness County, during the years 1910-11, 1911-12, and 1912-13, and the service to be continued during the year 1913-14. Presented 27th May, 1913.—*Mr. Chisholm (Inverness)*.....*Not printed.*

223. Return to an Order of the Senate calling upon the Clerk of the House to furnish a statement showing the number of Bills passed by the House of Commons since Confederation, which have been:—1. Amended by the Senate. 2. Rejected by the Senate. 3. Amended by the Senate and accepted by the Commons.—(*Senate*).....*Not printed.*

224. Return to an Order of the House of the 14th May, 1913, showing whether a contract was passed by the Post Office Department in the year 1911, for the use of stamp vending machines, the terms of said contract, the date, and by whom signed. Presented 2nd June, 1913.—*Mr. Lemieux*.....*Not printed.*

225. Ordinances of the Yukon Territory, passed by the Yukon Council in the year 1913. Presented by Hon. Mr. Coderre, 2nd June, 1913.....*Not printed.*

226. Names of judges of Superior and Circuit Court in province of Quebec, date of appointment, &c.—(*Senate*).....*Not printed.*

227. Return to an Order of the House of the 19th May, 1913, for a return showing the per capita taxation for the year ending 31st March, 1913, and for each of the twelve preceding years. Presented 3rd June, 1913—*Mr. Hughes (Kings, P.E.I.)*....*Not printed.*

228. Return to an Order of the House of the 29th May, 1913, for a return showing whether a certificate has been issued by the Treasury Board authorizing the transfer of the assets and liabilities of La Banque Internationale du Canada to the Home Bank; the terms of the said transfer, and all documents bearing on this question. Presented 3rd June, 1913.—*Mr. Lemieux*.....*Not printed.*

229. Report of the Canadian delegates to the International Conference, held at New York for the consideration of the Commemoration of the First Century of Peace between the United States and the British Empire. Presented by Hon. Mr. Borden, 5th June, 1913.....*Not printed.*

230. Return to an Address to His Royal Highness the Governor General of the 10th March, 1913, for a copy of all correspondence, memoranda, orders in council, departmental orders and reports from fishery overseers or other officers, during the past two years, relating to weir licenses in the waters of the Counties of Charlotte and St. John, Province of New Brunswick. Presented 6th June, 1913.—*Mr. Pugsley*.....*Not printed.*

231. Return to an Order of the House of the 24th February, 1913, for a copy of all letters and papers relating to the issue of half-breed scrip, warrant No. 2155, certificate No. 672, to Albert St. Denis, and the disposition of the said scrip. Presented 6th June, 1913.—*Mr. Oliver*.....*Not printed.*

232. Return to an Address to His Royal Highness the Governor General of the 3rd February, 1913, for a copy of all papers in connection with the withdrawal from settlement of a strip of land one mile in width along the line of the Hudson Bay Railway, and of the order in council, and also of all plans and correspondence in connection with the same, prior and subsequent thereto. Presented 6th June, 1913.—*Mr. Graham.* *Not printed.*

233. A return to an Order of the Senate dated 7th March, 1913, for a copy of all papers, letters, petitions, contracts and other papers relating in any way to the purchase of land at Le Pas for terminus of Hudson Bay road.—(*Senate*).....*Not printed.*

November 9, 1912.

To The Right Honourable
R. L. BORDEN, K.C., M.P.,
Prime Minister and President of Privy Council,
Ottawa, Ont.

SIR,—We have the honour to forward herewith our report in respect of the matters referred to us by His Royal Highness, the Governor General, under Commission dated 21st December, 1911.

Attached thereto will be found a special report on the subject of Government Dredging; and another relating to the Department of Public Printing and Stationery, together with exhibits and appendices.

Additional special reports referred to in this report, with their respective exhibits and appendices, have already been placed in your hands, viz.:

Report on Timiskaming Dam Contract.

" Sorel Ship Yard.

" Government Dredging (preliminary).

" Dismissal of R. E. Cook.

We have the honour to be, sir,

Your obedient servants,

G. N. DUCHARME,

R. S. LAKE,

Commissioners.

[L.S.] ARTHUR.

CANADA.

GEORGE THE FIFTH, by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas King, Defender of the Faith, Emperor of India,

To all to whom these presents shalll come, or whom the same may in any wise concern,

GREETING.

CHAS. J. DOHERTY, Attorney General, Canada.

WHEREAS in and by an order of Our Governor General in Council bearing date the twenty-first day of December, in the year of Our Lord one thousand nine hundred and eleven (a copy of which is hereto annexed) provision has been made for an investigation and inquiry, by our Commissioners therein and hereinafter named, into and concerning all matters connected with or affecting the administration of the various departments of the Government and the conduct of the public business therein, as upon reference to the said Order in Council will more fully and at large appear.

NOW KNOW YE that by and with the advice of Our Privy Council for Canada, we do, by these presents, nominate, constitute and appoint Alfred Bishop Morine, of the City of Toronto, in the Province of Ontario, Esquire, one of our Counsel learned in the law, Guillaume Narcisse Ducharme, of the City of Montreal, in the Province of Quebec, Esquire, and Richard Stuart Lake, of Grenfell, in the Province of Saskatchewan, Esquire, to be our Commissioners to conduct such inquiry.

To have, hold, exercise and enjoy the said office, place and trust unto the said Alfred Bishop Morine, Guillaume Narcisse Ducharme and Richard Stuart Lake, together with the rights, powers, privileges and emoluments unto the said office, place and trust of right and by law appertaining during pleasure.

And, we do further, by these presents, nominate, constitute and appoint you the said Alfred Bishop Morine to be the Chairman of such Commission.

And, we do hereby, under the authority of the Revised Statute respecting Inquiries concerning Public Matters, confer upon our said Commissioners the power of summoning before them any witnesses and of requiring them to give evidence on oath, or on solemn affirmation if they are persons entitled to affirm in civil matters, and orally or in writing, and to produce such documents and things as our said Commissioners shall deem requisite to the full investigation of the matters into which they are hereby appointed to examine.

And we do hereby require and direct our said Commissioners to report to Our Royal Highness the Governor General in Council the result of their investigation with the evidence taken before them and any opinion they may see fit to express thereon.

IN TESTIMONY WHEREOF, we have caused these our letters to be made patent and the Great Seal of Canada to be hereunto affixed.—Witness: Our Most Dear and Entirely Beloved Uncle and Most Faithful Counsellor, Field Marshal, His Royal Highness Prince Arthur William Patrick Albert, Duke of Connaught and of Strathearn, Earl of Sussex (in the Peerage of the United Kingdom); Prince of the United Kingdom of Great Britain and Ireland, Duke of Saxony, Prince of Saxe-Coburg and Gotha; Knight of Our Most Noble Order of the Garter; Knight of Our Most Ancient and Most Noble Order of the Thistle; Knight of Our Most Illustri-

ous Order of Saint Patrick; one of Our Most Honourable Privy Council; Great Master of Our Most Honourable Order of the Bath; Knight Grand Commander of Our Most Exalted Order of the Star of India; Knight Grand Cross of Our Most Distinguished Order of Saint Michael and Saint George; Knight Grand Commander of Our Most Eminent Order of the Indian Empire; Knight Grand Cross of Our Royal Victorian Order; Our Personal Aide-de-Camp, Governor General and Commander-in-Chief of Our Dominion of Canada.

At Our Government House, in Our City of Ottawa, this twenty-first day of December, in the year of Our Lord one thousand nine hundred and eleven and in the second year of Our reign.

By Command.

W. J. ROCHE.

Secretary of State.

P. C. 2928.

CERTIFIED *copy of a Report of the Committee of the Privy Council, approved by His Royal Highness the Governor General on the 21st December, 1911.*

The Committee of the Privy Council have had before them a memorandum, dated 20th December, 1911, from the Honourable R. L. Borden, the Prime Minister, stating that he has had under consideration the Order in Council, approved on the 8th day of May, 1907 (copy of which is hereto attached).

The Minister observes that by the terms thereof the gentleman therein mentioned were appointed Commissioners to inquire into and report upon the operation of the then existing Civil Service Act and kindred legislation with a view to proposing such changes as might be deemed advisable in the best interests of efficiency in the public service.

The Minister further observes that from the report of the Commissioners then appointed it appears that their inquiry extended to only a few of the departments of the Government and that in no case does it appear to have been complete.

The Minister remarks that it is desirable to take any action which may aid in securing increased efficiency and more thorough organization and co-ordination of the various departments of the Government and that to this end it is important to make such inquiry and to obtain such information as will enable any existing defects or abuses to be remedied, secure the adoption of more efficient methods, remedy any existing abuses and more thoroughly safeguard the public interest.

The Minister considers it advisable, therefore, to continue and enlarge the inquiry which was commenced under the Order in Council of May 8th, 1907, and in that connection to give to the Commissioners such enlarged powers as may be necessary for the purposes above set forth.

The Minister, therefore, recommends that commissioners be appointed to investigate and to inquire into and concerning all matters connected with or affecting the administration of the various departments of the Government and the conduct of the public business therein and especially (but without restricting the generality of the foregoing) the following matters:—

1. The methods employed in the transaction of public business.
2. The control of appropriations and expenditure.
3. The construction and maintenance of public works and the carrying on of dredging operations.

4. The administrative methods and operations of the chief spending departments.
5. The administration and alienation of the public domain.
6. The discipline and efficiency of the departmental staffs.
7. The duplication of the same or similar work in two or more departments.
8. Any other matters embraced in the scope of the Order in Council of 8th May, 1907, or mentioned in the report of the Commissioners thereby appointed.

The Minister further recommends that such inquiry should extend and relate to such period or periods of time preceding the date of the Commissioners' report as in the opinion of the Commissioners should be the subject of investigation and inquiry having regard to the public interest and to the facts and circumstances of any particular inquiry.

The Minister also recommends that for the purposes aforesaid the Commissioners be empowered to appoint a secretary and to engage the services of such expert accountants, engineers, technical advisers, or other experts, clerks, stenographers and assistants, as they may deem necessary or advisable; that the Commissioners be also authorized to retain the services of counsel to aid and assist the Commission in the inquiry; that the Commissioners be required to report to His Royal Highness in Council the evidence taken upon the said inquiry together with the findings of the Commissioners, and moreover that such reports shall, if deemed expedient by the Commissioners, or if required by His Royal Highness in Council, be made from time to time with respect to each department or branch thereof, as the inquiry proceeds;

That the Commissioners be requested to proceed with the inquiry as rapidly as possible;

That the Commissioners be appointed under the provisions of the Inquiries Act, Revised Statutes of Canada, 1906, Chapter 104, Part I, and have power to summon witnesses, to require them to give evidence under oath, orally or in writing, or on solemn affirmation if they are persons entitled to affirm in civil matters, and to produce such documents, records and things as the Commissioners may deem requisite to the full investigation of the matters which they are appointed to examine.

The Minister further recommends that Alfred Bishop Morine, of the City of Toronto, one of His Majesty's counsel learned in the law; Guillaume Narcisse Ducharme, of the City of Montreal, banker; and Richard Stuart Lake, of Grenfell, in the Province of Saskatchewan, farmer, be appointed as such Commissioners; that the said Alfred Bishop Morine be the Chairman of the said Commission; and that a Commission do issue to them accordingly conferring upon them the powers and duties aforesaid and such other powers as to commissioners in the like cases by law appertain.

The Committee submit the same for approval.

RODOLPHE BOUDREAU,
Clerk of the Privy Council.

P.C. 1108.

CERTIFIED *Copy of a Report of the Committee of the Privy Council, approved by His Excellency the Governor General on May 8, 1907.*

On a Memorandum dated 7th May, 1907, from the Minister of Finance, stating that while the general principles of the Civil Service Act are regarded as satisfactory, there are matters connected with the operation of the Act and the services and compensation of officials of the Government which require more careful inquiry and consideration than can be given by the Ministers of the several departments and, therefore,

it is desirable that such matters be inquired into by a Commission composed of gentlemen specially chosen for such purposes;

The Minister, therefore, recommends that the following gentlemen, J. M. Courtney, C.M.G., Ottawa, chairman; Thomas Fyshe, Montreal, and J. G. Garneau, Quebec, be appointed Commissioners to inquire into and report on the operation of the existing Civil Service Act and kindred legislation with a view to the proposing of such changes as may be deemed advisable in the best interests of efficiency in the public service;

That such inquiry should include the following subjects:

1. General operation of the Civil Service Act;
2. Classification of the Service;
3. Salaries;
4. Temporary employment;
5. Technical employees;
6. Promotions;
7. Discipline, hours of service, etc.;
8. Efficiency and sufficiency of the departmental staffs;
9. Retiring allowances;
10. Any other matter relative to the Service which in the opinion of the Commissioners requires consideration;

That while the Service at Ottawa should be the first subject for the consideration of the Commissioners, they be authorized and requested to extend their inquiry to any portion of the Outside Service that may come under their observation and which the time at their disposal may permit them to take into their consideration;

That the Commissioenrs be requested to proceed wtih the inquiry as rapidly as possible with a view to the presentation of their report at the next session of Parliament.;

That the Commissioners be appointed under the provisions of the Statute respecting inquiries concerning public matters and have power to summon witnesses, to require them to give evidence under oath, orally or in writing or on solemn affirmation if they are persons entitled to affirm in civil matters and to produce such documents and things as the Commissioners may deem requisite for the full investigation of the matters into which they are appointed to examine.

The Minister further recommends that Mr. Thomas S. Howe be appointed Secretary to the said Commissioners.

The Committee submit the same for approval.

RODOLPHE BOUDREAU,

Clerk of the Privy Council.

P.C. 1491.

CERTIFIED *Copy of a Report of the Committee of the Privy Council, approved by His Royal Highness the Governor General on 30th May, 1912.*

The Committee of the Privy Council have had before them a memorandum dated 28th May, 1912, from the Right Honourable Robert Laird Borden, the Prime Minister, stating that he has had under consideration the Order in Council approved on 21st December, 1911, appointing the Honourable Alfred Bishop Morine, Guillaume Narcisse Ducharme and Richard Stuart Lake as Commissioners to investigate and to inquire into and concerning all matters connected with or affecting the administration of the various departments of the Government and the conduct of the public business therein.

The Prime Minister observes that during the progress of certain inquiries which have been proceeding under the supervision of the Commission the Hon. Alfred Bishop Morine has tendered his resignation as a member of the said Commission and that the consideration of such resignation has been postponed pending the completion of the inquiries alluded to.

The Prime Minister further observes that the inquiriés above mentioned have now been practically completed and that the reports of the accountants and other experts upon such inquiries have been or will shortly become available.

The Prime Minister further observes that the duties of Mr. Morine as Chairman of the said Commission, in so far as the work has been brought to the attention of the Government, has been discharged with ability and energy and in a thoroughly impartial manner. It is thought, however, for the reasons which Mr. Morine himself has urged, that his resignation ought to be acccepted.

The Committee, therefore, recommend that the resignation of the Hon. Alfred Morine as a member of the said Commission, be accepted as of the 1st day of June A.D. 1912.

The Committee further recommend that on and from the said 1st day of June, 1912, the said Guillaume Narcisse Ducharme and Richard Stuart Lake be authorized and empowered to perform and discharge all the duties and do all the acts which under the terms of the said Order in Council of the 21st December, 1911, could be done or performed by the three members of the Commission thereby constituted and appointed; and that the said Order in Council of 21st December, 1911, be amended accordingly.

RODOLPHE BOUDREAU,

Clerk of the Privy Council.

REPORT

To His Royal Highness the Governor General of Canada in Council.

May it Please Your Royal Highness,—

The Commissioners appointed by Your Royal Highness under Commission dated 21st December, 1911, have the honour to present the following report:—

The duties assigned to the Commissioners, as set forth by the Order in Council of the 21st December, 1911, may be briefly summarized as follows:—

(*a*) To continue and enlarge the inquiry which was commenced under the Order in Council of 28th May, 1907, into the operation of the Civil Service Act and kindred legislation, with a view to proposing such changes as might be deemed necessary in the best interests of efficiency in the public service.

(*b*) To investigate and inquire into and concerning all matters connected with or affecting the administration of the various departments of the Government and the conduct of the business therein.

At a very early stage of their proceedings the magnitude of the task before them became abundantly apparent to the Commissioners. Since Confederation the administrative machinery of the Dominion as a whole has never been reported on or reorganized; nor have the various parts been considered in relation to the whole. There has been an absence of one central authority taking cognizance of the various departments of the public service, and endeavouring to harmonize and co-ordinate them into one organized administrative body. Owing to the great development of the country exigencies have arisen from time to time, and services have been created to meet these exigencies; but no organized effort has been made to co-ordinate these services, and assign to each its proper status and duties in the general machinery of the administration.

To suggest some workable means by which this condition of affairs could be remedied appeared to be the goal at which the Commission should aim.

The inquiries and report of the Commission of 1907 were followed by the enactment by Parliament of the Civil Service Amendment Act, 1908. The principal provisions of this Act may be briefly summarized as follows:—

(*a*) The re-classification of the Inside Service.

(*b*) The creation of a Civil Service Commission charged with the duty of selecting persons to fill vacancies in the Inside Service, and of examining into the qualifications of persons recommended for promotion therein.

(*c*) The determination and definition by Order in Council of the individual organization of the various departments of the Government, with the number and character of the offices, clerkships and other positions in each, and the duties, titles and salaries thereafter to pertain thereto.

Action was early taken in regard to the first two of these provisions; but the third and more difficult one has been only partially carried out and it appeared to your Commissioners that their first efforts might well be centred on this question, the successful settlement of which would be a long step towards the end they had in view.

How best to commence and carry on the study of the existing machinery and methods, some knowledge of which was essential for an intelligent consideration of the question referred to, was a feature to which much thought was given by the Commission. As a result of their deliberations, inquiries into the methods and functions of the various departments of the Government were intitated. Pending the result of these inquiries the Commission undertook investigations into certain specific matters which were brought to their attention, with the double object of familiarizing them-

selves with the details and routine of the departments on the one hand, and on the other of studying where the present system appeared to be defective.

The first of these was an inquiry into the circumstances connected with the building of a dam on Lake Timiskaming, during the course of which the Commission were able to get a considerable insight into the procedure and methods of doing business in the Department of Public Works. The result of their investigations has already been set out in considerable detail in a report submitted on the 2nd April last. Some of the weak points in the existing procedure were impressed upon them by the array of Orders in Council under the authority of which this undertaking was conducted from its inception; and certain improved methods which might be adopted in dealing with engineering works of this nature suggested themselves to the Commissioners, and were mentioned in their report.

During the course of this investigation, other inquiries were set on foot in regard to various other matters which had been brought to the notice of the Commission.

One of these was the unsatisfactory condition of affairs at the Government Ship Yard at Sorel, which was causing the question to be seriously considered as to whether it would not be better to discontinue any further new work at the yard; reduce the establishment; and use it merely for the purpose of repairs to the dredging fleet of the St. Lawrence Ship Channel. After searching inquiries by experts into the management, expenditure, workmanship and cost of construction, as well as personal investigation on the spot, the conclusions and recommendations of the Commission were embodied in a report which was presented on the 31st May last. It is understood that the action taken by the Government in consequence of this report has already resulted in a great improvement on the conditions previously existing.

A complaint by the second steward of the Canadian Government steamer *Arctic* regarding the conduct of the officer commanding during the cruise of that vessel in the far north in the years 1910-1911, was brought to the notice of the Commission. It was to the effect that use had been made of the expedition to carry on an extensive trade with the Esquimaux; and that Government stores had been used for the purpose of such trade. As the statements made reflected on the honour and integrity of a well-known officer, the Commission did not deem it desirable to give them the publicity that a public inquiry would involve unless they were satisfied that they were not of a trivial or personal character. Counsel was therefore employed for the purpose of advising them on this question. During the course of his inquiry their counsel intimated that the records of the Department of Marine and Fisheries were not of a nature to afford accurate information regarding the nature and quantity of the stores taken on board the ship, and the amount returned into store at the conclusion of the voyage; and he was in consequence authorized to employ accountants to examine into this matter. Before the accountants had concluded their labours, and counsel was able to report, the officer in question had left Canada on a private expedition to the Northern Seas and any further action, if action be deemed desirable, has necessarily to be postponed till his return.

At the request of the Minister of Marine and Fisheries the Commission instituted an inquiry into the affairs of the Montreal Harbour Commissioners, who are appointed by the Governor in Council, and under whose direction large sums of government money are being expended in the improvement of that harbour. The firm of Messrs. Price, Waterhouse and Company were instructed to audit the transactions of the Harbour Commissioners for the five years ending 31st December, 1911; to prepare statements of accounts and statistics showing the nature and volume of the business done; and to inquire into and report upon the organization and equipment provided, and the methods and procedure employed in carrying on the work. Their report dealing with these matters in considerable detail and making some valuable suggestions is appended hereto.

The Commission also instituted an inquiry into the conditions under which Dredging has been carried on in different parts of the Dominion by the Department of Public

Works. The result of their inquiries early convinced them that certain changes in the organization of the departmental service were of the highest importance. They were also of opinion that, in order to encourage competition for such work as it was proposed to have done by contract, certain changes should be made in the specifications of the tenders for the same. Their recommendations in these respects were embodied in an interim report which was issued early in order that any changes, which might be adopted as a result of them, could be put into force before the opening of the dredging season.

A considerable mass of papers, records and other material in connection with dredging performed during a number of years for the government by private concerns under contract, have been examined by the Commission. The result of their investigations has been to convince them that the system of dredging by contract is a very costly one, and that so long as dredging is purely a matter of government concern, it would be more economical for the government to provide their own plant and do the work themselves. Their reasons for arriving at this conclusion, as well as certain remarks on the subject generally, are appended hereto as a separate report.

The Commission have for a considerable time past been conducting an investigation into the Department of Public Printing and Stationery. In the earlier part of the year, they devoted some attention to the case of Mr. R. E. Cook, a former official of the department, who was dismissed from the service in October, 1910, at the instance of the then Secretary of State. A finding in connection with this case was submitted on 31st May last. The evidence then taken disclosed certain features in connection with the management of the department, the knowledge of which has been of value to them in their further inquiries into its affairs. A report setting forth in considerable detail their proposals for the reorganization of the department, and for the more efficient and economical performance of certain of its functions, is appended hereto.

The recommendations which the Commission have been able to make in connection with the foregoing investigations will, they hope, lead to improvement in the Services concerned. One result in special has been, as anticipated, to give the Commission a better insight into the methods and general working of the departments than they could probably have obtained in any other way.

The Commission have however for some time felt that it was impossible for them to carry on simultaneously a number of such inquiries in different Departments, and at the same time to give the attention necessary for the thorough consideration of the wider question of the better general organization of the Public Service as a whole. They have also come to the conclusion that the work in connection with investigation into some of the matters specially brought to their notice could more conveniently and thoroughly be performed by Departmental inquiries, instituted at the instance of the heads of the respective Departments. They were able the more readily to arrive at this conclusion as it was obvious that, as the main object for the creation of the Commission was that they should make suggestions for such changes in the organization of the Departments as would prevent the recurrence of any irregularities and faults of administration which might be found to exist, a general scheme upon which organization of the whole Service should be based ought to precede any recommendations which the Commission might be disposed to make in regard to individual Departments. This remark, it may be noted, does not apply with the same force to the Department of Public Printing and Stationery which has from its first formation been considered rather as a business establishment than an ordinary Department of the Public Service.

They have therefore devoted most of their attention to the compiling of information and data in regard to the functions and organization of the various departments and their branches, without which they did not feel that it was possible to deal intelligently with the question.

At an early stage in their proceedings the Commission invited the Civil Service Association and the Civil Service Federation, as representatives of the personnel of

both the Inside and Outside Services, to meet them and discuss from their own standpoint the subjects of classification, promotion, superannuation and retirement, and other questions, a satisfactory solution of which the Associations believed to be essential to the building up of a Service worthy of the best traditions.

They have also collected a considerable amount of evidence in regard to the Outside Service, having special reference to the question of the feasibility of its being brought at an early date under the operation of the Civil Service Act of 1908 as contemplated by Parliament.

It is the Outside Service with which the general public come most into contact, and their efficiency has a material effect on public business and convenience.

It is the Outside Service also who are responsible for the actual collection of the bulk of the revenue on the one hand, and on the other for the administration and expenditure in every part of the Dominion of the sums annually voted by Parliament. In numbers they greatly exceed the Inside Service and their duties, equally as important, are carried out, often in the face of extraordinary difficulties, with a fidelity and ability worthy of all praise. The fact that the members of the Outside Service are so widely scattered has prevented them from taking united action to get the same consideration of the many questions affecting their interests as the Inside Service have succeeded in securing. Moreover, their duties are so varied, and they cover such a vast area of country, that any legislation to deal with them as a whole will necessarily be of a more difficult and complex nature than legislation to deal with the Inside Service, concentrated as it is at headquarters.

Nevertheless the problem to be solved is the same in both Divisions of the Service, and it is, in a few words, how to attract into the employ of the State the ablest and best men that the country produces; how to develop their best energies in its service and to get them to look upon it as their life's work.

That there still is in the Inside Service, in spite of all efforts hitherto made to the contrary, a lack of uniformity in such matters as the character of the duties assigned to the different Classes, the salaries paid in proportion to the responsible nature of the work performed, and other minor matters such as vacation, sick-leave, hours of attendance, etc., is an undoubted fact. And that the same condition exists in respect to all these points and many others, in an aggravated form, in the Outside Service is no less true. For instance, some Departments give their officials, in certain parts of the country where living expenses are exceptionally high, provisional allowances to meet these expenses, while other departments do not. Some allow their officials a regular annual increase to their salaries, contingent on good behaviour, while other Departments give increases spasmodically, and the official has either to make personal application for it, or to leave it to the discretion of his chief to make application to Ottawa on his behalf. The salaries of officials in some Departments differ in an extraordinary degree from those holding similar rank in other Departments. In some Departments the salaries paid are subject to deductions for retirement or superannuation funds, or for the payment of guarantee bonds, while in others they are not.

Nor can the responsibility for this state of affairs be specially laid at the door of any Minister or set of Ministers. It must be attributed to the fact that hitherto there has been no central authority charged with the duty of assimilating, in so far as might be possible, the status and conditions of service of the outside officials of the various Departments of the Government. Careful supervision and inspection is carried out by the various head offices in Ottawa over their own officials in all parts of the Dominion, but each is striving to meet its own problems and difficulties in its own way.

In a country where the increase in population and business is so enormous as it has been in the Dominion during the last few years, the difficulties of keeping the Public Service in a position to meet all exigencies is undoubted. Especially is this the case in the Western Provinces where the Services are of such comparatively recent date. The fact that appointments to the Outside Service have hitherto been

considered a matter of local patronage has added to these difficulties by creating a local opposition to having the highest positions filled, as it would appear natural to suppose that they should be, by the most highly trained and experienced officials that were to be found, no matter from what part of the Dominion they came.

In the far West where a special inquiry was made by the Commission, perhaps the most pressing problems at the present moment would appear to be that of obtaining good men for the junior ranks of the Service, and of retaining their services when they have been procured. This is a difficulty experienced by all Departments and only varies in its intensity according to the pay, conditions of service, and future prospects in each. An abundant supply of well-educated and ambitious young men is to be found throughout the West and, given a fair salary to commence with, promotion by merit, and a prospect of attaining to the highest positions, there would be no difficulty in getting the best of them to enter the service of the State.

It must be remembered that there is much competition for good men from the large commercial concerns in the West, such as banks, insurance and loan companies, railways, etc., and that these give better salaries and other advantages than are now offered by the Government Service. The Provincial Governments also give considerably better pay to their officials. On the other hand there will always be a number to whom the status and permanency of a government office will be a sufficient attraction if there is a living wage to begin with and a reasonable prospect for the future.

The cost of living has of late years increased very greatly in every part of the Dominion, but the increase is specially marked in the West. It is probably true that living has always been more expensive there than in the East, but the proportionate increase in the West within the last year or two has been greater than in the East. Evidence was offered to the Commission at every place visited in regard to both these points. Officials transferred from Ottawa and other Eastern cities to the West during the last five years or so, testified that on arrival they found the cost of living from twenty to thirty per cent higher and with fewer comforts than in the East. Officials long resident in the West testified that the increase in the cost of living there, within the last five years, has been at least thirty per cent.

These conditions have been recognized by some of the Departments who give a special provisional allowance to the junior ranks in their service. This provisional allowance, however, is only given by three or four of the Departments and is not of a uniform rate. One Department gives $180 a year to its junior ranks, another $150, another $100, while a fourth gives $200 to one of its branches and nothing to another branch. In some of these Departments it is given only to the lower salaried officials: when they reach a certain salary they lose the allowance.

The matter of provisional allowance is not the only one in which there is a marked difference between the conditions of service in the different Departments. As has already been pointed out there are wide differences in the salaries given to officials of similar rank; in the manner in which increases to those salaries are made; in the deductions for the retirement and superannuation funds, and the payment for guarantee bonds. With reference to the bonds, one official informed us that no deduction was made from his salary and the salaries of his subordinates by the head office, but that they were required to pay for them directly from their own pockets. He not only paid for his own bond, but also paid for those of his subordinates as he did not think they could afford it out of their small salaries. In the matter of vacation, some Departments give three weeks, some two and some none.

When, as is generally the case, most of the Departments have their offices in the one public building, the difference in the treatment of the various officials is very noticeable and leads to considerable dissatisfaction.

It has already been pointed out that the Outside Service is the one which comes most closely into touch with the general public. This is especially the case with the Postal Service, in the efficiency of which almost every individual in the country is

personally interested. In the Post Office the difficulty of keeping good men in the lower grades of the Service appeared to be exceptionally great. In Edmonton seventy per cent of the staff of a year ago had left. In Saskatoon seventy per cent had left in eighteen months. In Regina half of the staff had left in one year, with the consequence that, as it has recently been found necesary to increase the staff there, seventy-five per cent of those now employed are inexperienced. Similar difficulties were stated to exist in all the other Post Offices visited, with the consequence that the public are suffering great inconvenience in regard to this most important Service. Some improvements were effected at the last session of Parliament in regard to the salaries of the Post Office officials, but this is scarcely sufficient. The Postal Service itself is unpopular on account of the long hours, and night and Sunday work. The staff have to take their turn at the latter, and every third or fourth week have to work the full seven days. No day off during the rest of the week is given to compensate them for Sunday work, and no extra pay, and no Saturday half holiday is allowed. Then again, in consequence of the junior standing of such a large portion of the staff, junior clerks with low rates of pay have to fill very responsible offices. In one instance the clerk in the Money Order office gets $780 a year, and handles $5,000 to $10,000 a day. In another a junior third class clerk is the accountant in an office of which the income is nearly four hundred thousand dollars a year. It is contended that the office should carry the salary and that a man should be paid for the work he does; that clerks receiving very small pay should not hold such responsible positions and have to make up the small deficiencies which are bound occasionally to occur.

It is obvious that in a post office new employees can be of very little use until they have gained some experience, and some local knowledge; and it is reasonable to suppose that with inducements sufficient to keep trained men in the Service, not only would the public benefit greatly from an improved service, but fewer men could do the work and an economy would be effected thereby.

The conditions existing in the Postal Service are given as an instance, but the same difficulties in retaining the services of good men in the junior ranks of the Outside Service appear to exist very generally throughout the West, and instances could be multiplied. A possible exception to this is the Customs Service, in which initial salaries for the West are $900 a year.

While the need of bettering the condition of the lower officials, if the Public Service is to be efficiently carried on, was primarily urged upon the Commission, the position of those filling the higher ranks of the Service was also brought to their attention. As has been pointed out already, the cost of living has increased greatly and this affects the higher ranks just as it does the lower ones. It was argued that public officials are expected to keep up a certain position and that in many cases those who have done so in the past are now, in consequence of the abounding prosperity around them, being obliged to move into smaller houses, and to reduce their scale of living.

A number of interesting comparisons were laid before the Commission while in British Columbia in regard to the salaries paid to certain officials of the Dominion Government compared with those paid by the Provincial Government, as well as in some cases with the salaries paid by the United States Government to their employees.

At New Westminster the Provincial Insane Asylum and the Dominion Penitentiary are situated side by side. The asylum has about 600 inmates, and the penitentiary about 350. The scale of salaries throughout is greatly in favour of the officials of the asylum. Penitentiary guards, after three months' probation, get $58.33 a month with no increase even if they remain fifteen or twenty years, and no subsistence. The male attendants in the asylum get $40 to $55, together with board and lodging. In the Provincial Gaol at New Westminster the convict guards get $75 a month while the city police constables commence at $75, rising in their fourth year to $90. The warden of the penitentiary stated that he had great difficulty in keeping his men, especially those who had not become entitled to a gratuity. He has also tremendous trouble with guards trafficking with the convicts, which he attributes to the smallness of the salaries.

Another comparison submitted had reference to the salaries of the Dominion Inspectors of Boilers, who receive $1,400, rising by irregular increments to $1,600. Provincial Inspectors of Boilers begin at $1,620 and rise by regular annual increments of $60 to $2,160. While the United States Inspectors who are engaged in the same work as the Dominion Inspectors, and who mutually accept each others' certificates, receive $2,250. Yet another comparison which was of something more than ordinary interest was that between the conditions of the Lighthouse Service on the Pacific Coast in the United States and British Columbia. It showed the superior consideration given in the former country to the men who fulfil these arduous and responsible duties, to that given in Canada. Both in regard to pay and allowances, leave, number of assistants and other matters, the comparison was in favour of the United States. One case which had just occured was particularly brought to the notice of the Commission. The lightkeeper at Sand Heads Lightship had not had any holidays for eleven years. If he had applied for any he would have had to pay for a substitute. His salary was $1,470, but out of that he had to pay an assistant, to whom he gave $540 and board. The assistant had left him to get a better position, and when he was relieved, he had been alone for a fortnight, unable to leave his ship, and crippled by rheumatism. He was then in a pitiable condition and was walking on all fours.

At several points the Commission had the advantage of a general conference with the leading officers of the various Departments, at which individual and collective views were expressed as to the best means of increasing the efficiency of the Outside Service. There was a very close agreement in regard to most of the questions discussed and the following statement may be valuable as the consensus of opinion of a large majority of the leading officials west of the Province of Manitoba:—

1. That entrance to and promotions in the Service should not be a matter of political patronage, but that the whole Outside Service should be placed under the Civil Service Commission; that promotion therein should be by merit, and that the higher positions should be filled from the Service itself.

2. That the initial pay and allowances for clerks entering the Service in the West should, at the present time, be not less than $75 a month.

It was pointed out that in the early eighties Dominion officials at Winnipeg received an increase of forty per cent over the salaries paid in the East in order to meet the increased cost of living there. After a while, this was reduced to twenty-five per cent and later done away with altogether. The present method of a specific allowance seemed however to be generally considered satisfactory provided the amount were sufficient and it was granted to all officials from the lowest to the highest. Should the conditions of living in the West return to normal this allowance could be discontinued.

3. That in each case there should be regular annual increments of salary to which the employee should be entitled provided he has given satisfaction. The opinion was expressed by some that the increment should be $100 a year.

It was pointed out that the practice which now prevails in most Departments, whereby the official has to ask for a rise or get his chief to recommend him, is unsatisfactory. Some chiefs have an objection to recommending anybody for an increase, and in many cases political influence is used to get it.

4. That conditions should be made as uniform as possible in the various Departments as regards pay, allowances, vacation, hours of work, etc.

5. That a system of superannuation should be introduced and would be preferable to the present retirement system.

This undoubtedly was looked upon as the most powerful factor in retaining men in the Service. It was generally agreed that it should be contributory. In regard to the amount of contribution, the feeling of the great majority appeared to be that if the family could be made beneficiaries in case of death, five per cent would be satisfactory. This was the amount proposed in the Bill introduced into the Senate by the Honour-

able L. G. Power. It may be mentioned that at several meetings where all grades and classes of the Civil Service were represented, the principles contained in Senator Power's Bill were in the main considered satisfactory. There was a general agreement that contribution to superannuation should be made compulsory in future; and that there should be a definite age for retirement, which in the opinion of the majority should be voluntary at sixty and compulsory at sixty-five.

6. That examinations for promotion be solely in regard to a man's fitness for the duties of the office.

Some discussion took place at various points on the question of throwing the Outside Service open to competitive examination and as to the likelihood of getting a sufficiency of candidates. There was considerable caution in expressing opinions in regard to this matter, which had evidently not been very much considered. The feeling that local appointments should be made from local people made some hesitate to approve of such a course. On the whole, however, the majority seemed to believe that it was quite feasible and that it would be beneficial to have appointments made in this way.

The endeavour of the Commission in the foregoing remarks has been to give, in as concise a form as possible, the general trend of opinion among the officials of the Outside Service in British Columbia, Alberta and Saskatchewan, as to the best means to be taken to promote efficiency in the Public Service in that rapidly expanding and changing portion of the Dominion. A number of special cases requiring special attention appear in the evidence taken, and will be brought individually to the notice of the heads of the Departments affected.

Speaking generally, the result of their work so far, and of the evidence taken, has been already to indicate to the Commission general conclusions in regard to some of the most important questions affecting the Service. The whole subject, however, is of such a difficult and complex nature and its successful settlement of such vital importance to the future of the Dominion, that they have been impressed with the feeling that an opinion regarding it should be sought from the most eminent authority that could be found. They have observed therefore with great satisfaction that the Right Honourable Sir George Murray, G.C.B., a gentleman of unequalled experience in such matters, has at the instance of the Government, undertaken an inquiry, the scope of which is defined in the Order in Council of 7th October last, and which appears to the Commission to embrace very completely the general questions which have been engaging their attention.

Believing that the information and data which they have compiled would be of considerable value to him, they have placed the whole of it at his disposal. They have done so the more readily as they observed that the period of his stay in this country was limited.

This being the case, and holding the views expressed above, they feel that no useful end could be served by their making recommendations which would necessarily be based to a greater or less extent upon the same data.

In view of the foregoing, the Commission are of the opinion that the requirements of the Order in Council of the 21st December last can be most advantageously carried out, in regard to one phase of their work, by the Departmental Inquiries already alluded to; and in regard to the other, by the general inquiry into the organization and methods of the Public Service which is being conducted by Sir Geo. Murray.

Under these circumstances the Commissioners respectfully request that Your Royal Highness be graciously pleased to relieve them of the duties and responsibilities with which they have been charged by Your Royal Highness' Commission.

All of which is respectfully submitted.

G. N. DUCHARME,
R. S. LAKE,
Commissioners.

Ottawa, 9th November, 1912.

PUBLIC SERVICE COMMISSION

1912

SPECIAL REPORT

ON

LAKE TIMISKAMING DAM CONTRACT

Public Works Department

To His Royal Highness the Governor General in Council:

MAY IT PLEASE YOUR ROYAL HIGHNESS,—

The Public Service Commission appointed on the 27th day of December, 1911, and charged with the duty, amongst other things, of inquiring into 'the construction and maintenance of public works,' and 'the administrative methods and operations of the chief spending Departments,' have the honour to submit for your information this report of an inquiry concerning the construction of a dam at the head of the Long Sault Rapids, Ottawa River, commonly referred to as 'Lake Timiskaming Dam.'

In the autumn of 1904 an examination of the water conditions in the watershed of the Ottawa River was commenced. In 1905, a dam at the foot of Lake Timiskaming was designed and located. At the outset, the object was to reserve part of the flood water of the spring and summer for use during the autumn, for power purposes at the Chaudiere Falls and other places in the Ottawa River.

In 1909 it was decided to so construct the dam that it might more completely restrain the flood water of spring and thus improve the navigation of the narrows in the Ottawa River. The outlet of Lake Timiskaming at the Long Sault Rapids, is divided by an island into two streams, the larger and deeper being on the eastern side. The boundary line between Ontario and Quebec runs midway up and down this stream. The wooden dam was to be built at the upper end of the island, and stretch straight across from the Ontario to the Quebec shore. The design for concrete construction called for two dams, in reality; one on the Ontario side, about midway of the island, and one between the island, near its upper end, and the Quebec side, a trestle and earth-filled embankment across the island connecting the two dams.

In the Session of 1907-8, Parliament voted the sum of $75,000 for the construction of a wooden dam at the location mentioned. Later it was estimated that the cost of this dam would be $80,000. Tenders were advertised for and received up to the 19th day of November, 1908. A regular printed form of tender was supplied by the Department and used by the persons tendering. It called for an offer for the construction of the whole work for a bulk sum and it also included a blank item schedule in which prices were to be inserted at which any extra work or materials which might be required were to be charged. Four tenders were received for the following amounts, respectively:—$76,000, $98,000, $115,609, and $265,955, each accompanied by an accepted cheque for $8,000.

By report to Council dated November 28th, 1908, the Minister of Public Works recommended the acceptance of the tender of Messrs. Kirby & Stewart, of Ottawa, for $76,000. This firm had been formed to tender for this express work. This recommendation passed the Privy Council on the 15th day of January, 1909, and was approved by the Governor General on the 18th day of January, 1909.

By report to Council dated 20th day of February, 1909, the Minister recommended that the construction of a wooden dam be abandoned, and that a contract be entered into with Messrs. Kirby & Stewart for the construction of a concrete dam instead, at the unit prices mentioned in the schedule to Messrs. Kirby & Stewart's tender for the wooden dam. The approximate cost of the concrete dam was stated to be $108,050. This recommendation was approved by the Governor General on the 13th day of March, 1909. A contract with Messrs. Kirby & Stewart was executed on the 22nd day of July, 1909.

On the 11th day of November, 1910, the Minister recommended to Council that concrete work should be continued during the winter following, and that the contrac-

tors should be paid for housing and heating the concrete to preserve it from damage during freezing weather. This recommendation was approved by the Governor General on the 22nd day of December, 1910.

Coffer-damming and unwatering had been provided for in the contract, and was partially performed, but on the 4th day of January, 1911, the Minister recommended, 'that authority be given to pay the contractors over and above the contract price, the actual cost of coffer-damming and unwatering necessary to complete the dam, including removal of said coffer-dam, plus the usual 15 per cent for incidentals, use of tools, office expenses, etc.' This recommendation was made on the ground that, owing to exceptional circumstances, the difficulties of the work had been considerably increased, and that it was considered necessary in the public interests to co-operate with the contractors.

In the spring of 1911 a portion of the coffer-damming thus provided for was destroyed by the spring freshet, and on 5th August, 1911, the Minister reported to Council that it would be advisable that 'the contract should be terminated, the security given by the contractors be returned to them, and the work already performed, materials delivered and plant supplied be paid for, the further work to be proceeded with by day's labour at the sole cost of the government.' This recommendation was approved by the Governor General on 11th August, 1911; and on 5th October, 1911, an agreement was executed by the Deputy Minister of Public Works and the contractors. The security cheque was immediately returned; the plant and materials of the contractors were taken over, valued and paid for; and an examination took place for the purpose of ascertaining what amount was due to the contractors under the terms agreed upon. A disagreement arose as to the precise meaning of these terms. The amount due was, therefore, not decided, and payment of the balance claimed to be due to the contractors has not yet been made.

The dam on the Ontario side of the island was completed in 1910, but the dam on the Quebec side will not be fully completed before the low water season of 1912. The final cost of the structure can only be approximately calculated and the estimate may be falsified by accidents. It is as follows:

1912.	
Jan. 22. Actually paid contractors	$190,859 82
" " otherwise	55,713 82
	$246,573 64
Mar. 1. Expended under departmental contract	86,000 00
Cash expenditure to March 1, 1911	$332,573 64
Estimated cost to complete	$120,000 00
" land damage	45,000 00
	$497,573 64
Unadjusted claim by Kirby and Stewart, *i.e.*, difference between their claim for total expenditure ($334,572.18), and amount of cash already paid them, but not including claim, if any, for future interest	143,712 36
	$641,286 00

The foregoing is a brief outline of the more salient facts concerning this matter which have been inquired into and carefully considered by the Commission and upon which they now have the honour to make the following findings:

AWARDING CONTRACT WITHOUT TENDER.

Tenders for the construction of a concrete dam or in the alternative for a dam which might be of wood or of concrete were not asked for by public advertisement or otherwise. The only tenders asked for, the only tenders received, were for a wooden dam, to be built for a bulk sum. The unit prices mentioned in these tenders were for extra work which might incidentally prove to be necessary. The plans and specifications on which tenderers based their figures did not show that any concrete would be required. In the schedule to the tenders a price for concrete was named, but the three tenderers who have been examined state that the prices for concrete quoted by them respectively, referred to a very small quantity, which might perhaps be necessary in or about the foundation of the wooden dam, and were not such prices as they would have asked for the construction of an entire concrete dam. The Auditor General, on the 28th day of January, 1909, in a letter addressed to the Deputy Minister of Public Works, expressed the opinion that new tenders should be called for if the construction of a concrete dam was to be undertaken. This objection was not referred to the Law Officers of the Crown for consideration, but another objection by the Auditor General based on the same grounds was placed before the Deputy Minister of Justice for an opinion as late as the 19th day of May, 1911. He replied, 'It is, I think, questionable whether section 36 of the Public Works Act should not have been complied with in respect of the altered project, and, therefore, whether in view of the absence of tenders by public advertisement for the execution of the works, the Governor in Council had the power to authorize the contract.'

The Minister of Public Works, on or about the 4th day of February, 1909, overruled the first objection made by the Auditor General on grounds suggested by the Deputy Minister and Assistant Deputy Minister. It was said by them that to call for new tenders would involve undesirable delay. There was in the actual circumstances no sound ground for this argument; there was no pressing emergency in which delay would be injurious to the public interest. When the decision to build the dam of concrete was made, the need of haste had ceased. On the 22nd day of December, 1908, the Assistant Deputy Minister had written to J. R. Booth, Esq., of Ottawa, 'It is an utter impossibility now to have the dam built this winter, and the contractors will not take the risk of commencing the work of construction so late.' The further necessary examination of the location of the dam, absolutely essential for a concrete structure, was not undertaken for more than a month after the Minister's decision, and the plans and specifications were not completely prepared until four months later, nor the contract finally executed until five months later. As late as September, 1909, the Engineer in charge complained that the only plant which the contractors had yet on hand was one derrick, and that only one end of the dam had then been begun. It was suggested by the Assistant Deputy Minister, as a reason for awarding the contract to Kirby & Stewart, that they had made some arrangements for the purchase of timber. But no contract for the dam had in fact been executed, and if by verbal authority from some person in the Department of Public Works, the contractors had been induced to order timber, the cost thereof could have been assumed, if necessary, by the Department, and the timber used in connection with the building of the concrete dam.

WORK INITIATED WITHOUT DUE INVESTIGATION.

In dealing with this whole matter, lack of method and failure to exercise due care are strongly indicated. The project of building a wooden dam was of minor importance compared with the scheme for the larger concrete dam which supplanted it. But the investigation which preceded even the plan for the wooden dam was insufficient, while the contract for a concrete structure was authorized before the exact information

essential for the proper initiation of a work of such magnitude had been obtained. After deciding to build a concrete dam, and after the contract had been authorized, the location of the dam was wholly changed, its design altered, and its cost increased. In a letter dated 29th December, 1910, the contractors say,—'the work contemplated when the tenders were called for was greatly and entirely changed in character and location.' The decision as to the location finally decided upon was arrived at before adequate tests of the character of the bottom on the Quebec side had been made; and the change of site, about the wisdom of which there is difference of opinion, was decided on by the Engineer in charge without any supervision or adequate consideration by the Chief Engineer or any other person in the Department of Public Works. The dam on the Quebec side was located on a rapid, where construction was much more difficult than at the head of the rapids, in deeper water and consequently a more dangerous bottom. The construction of the work was allowed to lag over a very long period of time, with a consequent increase of dangers and an ultimate increase of cost, which might not have occurred if the work had been expeditiously done. The Chief Engineer of the Department did not from the outset exercise any supervision over estimates, plans, specifications or work. The Deputy Minister, not being an engineer or familiar with works of this kind, left the control of the matter, so far as the Department was concerned, in the hands of the Assistant Deputy Minister, who consulted from time to time with the Minister, the Deputy Minister and with the Engineer in charge, but who himself had no intimate knowledge of the work which was being done.

NO SPECIFICATIONS FOR UNWATERING.

In the tenders for a wooden dam, the amounts asked for unwatering (which includes coffer-damming and pumping) were $4,000, $15,000, $20,000 and $54,994. So great a divergency should have indicated to the Department that the tenderers held very different opinions as to the difficulty and methods of unwatering the site chosen for the dam. Thereupon the Department should have decided what methods would be advisable, and should have specified its requirements, especially as the Department itself would need to know the probable cost, in order that the reasonableness or otherwise of tenders could be decided on. Such a precaution became essential to sound judgment when it was decided to construct a concrete dam, which required to be kept dry while the concrete was setting; and, besides, the changed site chosen for the concrete dam very greatly increased the difficulty and cost of unwatering. It is cogent evidence of the importance of such precautions that the unwatering which Kirby & Stewart contracted to do for $4,000, has actually cost to date about $135,000, and may cost much more. The truth is, however, that from the time the wooden dam was designed to the time when the contract work was abandoned, no scheme of unwatering was devised by the engineers of the Department, or its requirements stated. If the question had been studied at the outset, the difficulties recognized, and a proper scheme specified, other contractors than Kirby & Stewart might have undertaken the whole work, or a contract might have been entered into with Kirby & Stewart which would not have been violated and finally cancelled before the dam was completed. It is quite possible that a proper study of the unwatering question and the adoption of proper methods would have led to the completion of the dam long before this.

It should be said concerning the engineer in charge of the work for the Department, that when he accepted the position the contract had already been awarded to Messrs. Kirby & Stewart, and the sum of $4,000 for unwatering had been expressly included in the contract, so that when he came to make an estimate, in June, 1909, of what the dam would probably cost in its new location, he merely included as the cost of unwatering the fixed sum of $4,000; and if at that time the thought of its insufficiency occured to him, he may have disposed of it on the ground that the question was no longer open for consideration, but the Commission are of the opinion that he

should have pointed out to the Department the inadequacy of the amount for unwatering to be included in the proposed contract. Excuses of this kind cannot, however, be offered for the other Engineers in the Department, who had to deal with the earlier stages of the matter. It is a fact which is worth noting, that the amount asked for by Kirby & Stewart for unwatering was precisely the amount allowed for that purpose by the Engineer who prepared for the Chief Engineer an estimate of the cost of a wooden dam. If this were a coincidence, it is a strange one.

COST OF UNWATERING ASSUMED BY GOVERNMENT.

It has already been mentioned that the contractors agreed to accept $4,000 for the 'unwatering' necessary in the course of constructing the concrete dam. The amount was absurdly inadequate, but largely through its inadequacy Kirby & Stewart had been the lowest tenderer for the wooden dam, and mainly through this inadequacy also it had been made to appear as though they were the lowest tenderers for the concrete dam. Before executing the contract for the concrete dam, after abundant time for examining the location had elapsed, Kirby & Stewart were specially notified in writing that they would not be allowed more than their bid for the unwatering, and they signed the contract, therefore, with full knowledge or means of knowledge of the risk they ran, that the sum for unwatering would prove insufficient. They unwatered the Ontario side, and commenced a coffer-dam on the island end of the dam on the Quebec side. On the 4th day of January, 1911, the Minister reported to Council that 'authority should be given to pay to the contractors over and above the contract price the actual cost of coffer-damming and unwatering necessary to complete the dam across the Quebec channel, including removal of the said coffer-damming, plus the usual 15 per cent for incidentals, use of tools, office expenses, etc.' This report was approved by Council on the 24th day of January, 1911. By this time the coffer-dam was completed, and unwatering was proceeded with throughout the winter. In May the freshet swept away that portion of the coffer-dam which was built in January. The contractors' claim under the Order in Council amounts to $61,430.38; of this they have received $48,000.

The reasons alleged by the Minister for his report were briefly these, that radical alterations in location and design of the dam had taken place, and also that the whole sum asked by the contractors for unwatering had already been expended on the Ontario side. But as a fact, the alterations referred to had been made prior to the execution of the contract, and after the special notice referred to above had been given to the contractors. The real reasons for the Minister's report were not disclosed therein. The evidence shows that in December, 1910, the contractors interviewed the Minister, claiming an allowance for excavation. This claim was disapproved by the Engineer in charge, but it was suggested that an allowance might be made for unwatering, and the Engineer was asked to prepare a report recommending such an allowance. A discussion took place between the Assistant Deputy Minister and the Engineer on the one side, and the contractors, with their counsel, Mr. McGiverin, M.P., on the other. The Engineer was impressed, he says, with the idea that the contractors were financially unable to proceed with the work unless some extra allowance were made; and consequently he made a report in which the arguments appear that were later the basis of the Minister's recommendation to Council.

Upon the receipt of an application from the Department of Public Works for an amount to pay the contractors under the provisions of the Order-in-Council last referred to, the Auditor General objected that there was 'No record in the Audit Office of any previous case of the kind where an Order in Council amended a contract in the way of giving increased remuneration to a contractor.' This objection was referred to the Deputy Minister of Justice for an opinion, and he replied that if the original contract for the concrete dam had not been illegally given (by reason of the

omission to advertise for tender) the increased payment provided for by the Order-in-Council dated the 24th day of January, 1911, was probably within the power of the Governor-in-Council, provided it was advisable or required in the public interest. This opinion implies that if the original contract was illegally given (which is strongly suggested), the Order-in-Council last referred to was also illegal.

ASSUMPTION OF WHOLE WORK BY GOVERNMENT.

In the beginning of May, 1911, that portion of the coffer-dam which the conditions of the Order-in-Council last mentioned applied to was almost wholly swept away by a freshet. In June the contractors asked that the Department assume the completion of the work and 'pay for the work completed to date.' Mr. Chrysler, K.C., Counsel for the contractors, interviewed the Minister concerning the matter. After consultation between the Minister and the Deputy and Assistant Deputy Minister, it was decided to take over the work, as requested, and the Assistant Deputy Minister was instructed to state in writing the reasons for this decision. His report, after discussion, was also signed by the Engineer in charge. They recommended that 'the work be paid for at contract rates.' A draft report for the Minister to send to Council recommending settlement on this basis was prepared by the Assistant Deputy Minister. On the 18th day of July, 1911, the contractors were notified of the recommendation the Minister intended to make, and they were asked if they concurred in the terms proposed. The contractors personally, or by their counsel, discussed the matter with the Minister. They objected to payment at contract prices, and demanded payment of their actual expenditure. The Minister struck out of the draft the words 'that the work already executed be paid for at contract prices,' and substituted in place thereof the words, 'that the work already executed which may be considered as absolutely necessary be paid for at its actual cost'. By this change the Government would, in effect, assume a loss of about $100,000 which the contractors had incurred. No calculation of the amount of loss, nor any inquiry as to the real causes of the loss, appears to have been made at this time. But the amount was known to be large. In August, 1910, the contractors alleged that they had up to that time made a loss of $57,883 in excavation alone. It was known, too, that the loss had been incurred very largely through delay, neglect and inexperience by the contractors or for which they were liable. The contract prices, except for unwatering, were not on the whole unduly low; for concrete they were not even the lowest quoted in the tenders for a wooden dam. Neither the Assistant Deputy Minister nor the Engineer in charge recommended that on the ground of merit or equity, or any other ground, the Government could assume liability for more than contract prices, and the responsibility for this assumption rests actually, as well as theoretically, solely on the Minister. At the moment of signing the recommendation which was sent to Council, the Minister inserted in his own handwriting the words 'and reasonable' between the word 'actual' and the word 'cost'. On the 5th day of August, 1911, the Minister reported to Council: the report was adopted on the 10th, and approved on the 11th. No mention was specifically made in the report that the contractors' loss had been assumed, nor does the report contain any language which would draw to the attention of Council the real and full significance of the recommendation.

On the 5th day of October, 1911, the Minister personally directed the Deputy Minister, in pursuance of the Order-in-Council dated the 11th day of August, 1911, to execute an agreement which had been drafted in the office of Messrs. Chrysler, Bethune & Larmonth, of Ottawa, acting for the contractors. The Law Clerk of the Department testifies that he was not told to examine the draft, but merely to copy it for signature; the Deputy Minister does not concur in this. A punctuation appears in the agreement which was not in the Order-in-Council, and the difference may be material. The Order-in-Council says 'that the work already executed which may be

considered as absolutely necessary shall be paid for at its actual and reasonable cost.' By the use of two commas, this provision appears as follows in the agreement, 'that the work already executed, which may be considered as absolutely necessary, shall be paid for at its actual and reasonable cost.' By this punctuation a condition may have been changed into an assertion; what was a proviso in the Order-in-Council intended to lead to an investigation as to what work was really necessary may in the agreement amount to a declaration that all the work actually done shall be incontestably assumed to have been necessary. That such a change should have been made in such a manner is at least startling proof of the need of changed methods in the Department. A dispute has already arisen in relation to the language used both in the Order-in-Council and subsequent agreement, as to the meaning of the words 'actual and reasonable cost.' Actual cost may not be reasonable. In such a case are contractors to be paid, not the actual but the reasonable? If so, why was the word 'actual' used? What tribunal is to decide what is actual and reasonable, or if there be a difference between these two, decide what is reasonable?

IMPORTANT LEGAL QUESTIONS.

Very important legal questions arise out of the additional payment to the contractors for the coffer-damming and unwatering done in the winter of 1911, and the assumption when the contract was cancelled of the loss the contractors had previously incurred. Both instances may be referred to as being in their essence violations of the express contract which had been entered into with all due solemnity; in one case, the contractors were promised while the work was in progress a much larger price for the work done and to be done than they had deliberately agreed to accept; in the other case, the contractors were promised an amount not only in excess of the contract price, but for work which had already been fully performed.

Section 36 of the Public Works Act provides that if any works are to be executed under the direction of any Department, the Minister shall invite tenders by public advertisement, unless (amongst other exceptions) it can be more expeditiously and economically executed by the officers and servants of the Department. No evidence was given establishing this exception in the coffer-damming and unwatering instance; no assertion was made in the Order that it proceeded on this ground. Surely if the law requiring tenders is to be set aside on the plea of an exception, the existence of exceptional circumstances must be shown, and the Order-in-Council should contain reference thereto.

With relation to the arrangement made in August, 1911, this question arises,—Has the Council power, not merely to cancel a contract, but to enter into an agreement to make good to contractors a loss they have already sustained? Parliament had not voted money for this purpose; and the agreement was not expressed to be subject to the approval of Parliament. No emergency existed which warranted this agreement, and it cannot be successfully defended either on the ground of equity or necessity. What legal consideration flowed from Kirby & Stewart to the Government for the agreement by the latter to pay a larger sum than the existing contract called for, for work already completed? Time had been the essence of that contract; the last extended time had expired; the contractors were in default; they had perhaps lost all rights under the contract.

In the opinion given by him on the 6th day of July, 1911, the Deputy Minister of Justice expresses the view that if Section 36 of the Public Works Act was not violated, by awarding a contract to Kirby & Stewart for the construction of a concrete dam without obtaining tenders, a payment to the contractors in excess of the amount contracted for, although for the same work, could legally be made by Order-in-Council under certain circumstances. Such a power would easily be capable of abuse. It opens the door very wide to evasions of the law and invites the practice of using

tenders as a mere cover for awarding contracts to favourites. Nothing could be easier than to give contracts at very low prices, to cut out bona fide tenders, and then by Order-in-Council award sums in excess of those contracted for. The practice of relieving contractors, who have taken contracts at too low a figure, from loss on their contracts is to be entirely deprecated. Security for the due execution of a contract is usually made by the contractors by a deposit of 10 per cent in the estimated cost of the work. No instance of the forefeiture of this deposit for non-fulfilment of contract could be recalled by the Deputy Minister or other witnesses within the last fifteen years. On the other hand, other instances were mentioned where the Government had taken the work off contractors' hands, thus saving them from possible loss on their contracts. Such practices generally applied would render the system of competitive tenders a farce, and all contracts one-sided. Inasmuch as in the coffer-damming and unwatering instance, some unwatering work remained to be done by the contractors after the agreement to pay them an amount extra to the contract price, it does not follow that the opinion of the Deputy Minister of Justice about this payment would apply to the August, 1911, arrangement, when the extra payment promised was for work already fully performed.

INEXACT REPORTS TO COUNCIL.

It is, of course, impossible for the Commission to ascertain to what extent the reports of the Minister to Council were supplemented by statements made by the Minister in the Council, but upon the assumption that Council would not ordinarily know from time to time anything more about the matter than was revealed by the various written reports of the Minister on the subject, the Commission are of the opinion that Council never was at any time in a position to realize the circumstances surrounding this work, but that on the contrary, the reports to Council, by inaccurate expression and omission would have a tendency to misinform and mislead the Council as to the real situation of affairs. By way of illustration—attention is particularly drawn to the following matters in the reports to Council,—

In the report dated the 20th day of February, 1909, it was said that 'the amount of the various tenders for the construction of the dam of concrete would be as follows: * * * Messrs. Kirby & Stewart still remaining the lowest tenderers on the altered conditions." This would naturally suggest to Council that the tenders received had been in alternative, for wood and also for concrete, and it also directly states that Messrs Kirby & Stewart were tenderers on the altered conditions, whereas, in fact, the tenderers had not contemplated a concrete dam, and were never asked to tender for such a dam. It will be seen by examination of other reports to Council that this particular misrepresentation was continued from time to time. It was never mentioned to Council in writing that the Auditor General had objected in 1909, and again in 1911, to the legality of the Orders-in-Council; nor that the Deputy Minister of Justice had, by his opinion dated the 6th day of July, 1911, impliedly supported the Auditor General's objection. In the report to Council dated the 11th day of November, 1910, it is said that the work of housing and heating was not provided for in the contract, and that an additional allowance to the contractors was recommended; whereas, it will be seen, by reference to the specifications attached to the contract, that housing and heating had been expressly provided for, and it is a fact that heating was done during the winter of 1910 at the expense of the contractors, without any claim having been made by the contractors for any extra allowance. The report should have stated that it was deemed desirable to alter the method of housing and heating provided for in the contract. This would have caused inquiry, perhaps, as to relative cost, and Council might not have agreed to assume the whole cost. In the report to Council dated the 14th day of January, 1911, mention is made that after authority had been given by Council to change from wood to concrete, it was found

necessary to change the site of the dam, and also considerably change the lines of the original plans, increasing the cost of coffer-damming and unwatering. It was recommended, therefore, that the contractors should be relieved of the work of coffer-damming and unwatering the Quebec Channel, and that the cost should be undertaken by the Government, but no mention whatever was made of the fact that the changes referred to had been all decided upon prior to the execution of the contract by Messrs. Kirby & Stewart, and that the contractors had been notified before they signed the contract that the Department would hold them strictly to the sum which had been agreed upon as the cost of unwatering. The Council could not from the reports know anything whatever of this fact, the knowledge of which was essential to a proper consideration of the recommendation before Council. Furthermore, in this report it is stated that 'the Engineer reports that the contractors have so far executed their work in a first class manner; they have shown goodwill to meet the changed conditions,' language which was broadly commendatory of the manner in which the contractors had performed their contract. The fact was, however, that the contractors had not personally superintended the work, had employed incompetent foremen, and had been guilty of great delay. The Engineer in charge frequently complained to the Department, and in February, 1911, was so strong in his protest that the Deputy Minister was moved to send the following letter:—

28th Feby., 1911.

Gentlemen,—

The attention of the Minister has recently been called to the very unsatisfactory manner in which you have been attending, or rather, not attending to the execution of your work under contract with this Department at Temiscamingue notwithstanding the steps taken by the Department to assist you, and I am directed by the Minister to request an immediate explanation of your negligence in this connection, and to insist on steps being taken by you forthwith to have a member of your firm who would be responsible personally on the ground to direct this work. The Department will otherwise be forced to take some summary action in the matter as it is absolutely impossible to allow the present condition of affairs to go on any longer.

Yours truly,

Deputy Minister.

Messrs. Kirby & Stewart,
Contractors.
Elgin Street,
Ottawa, Ont.

Attention is called elsewhere in this report, with regard to the Minister's recommendation to Council dated 5th day of August, 1911, and approved on the 11th day of the same month and year, that mention was omitted altogether of the fact that very serious loss had been incurred by the contractors, and that the Government was being asked to assume that loss.

The Commission have ascertained that the practice of the Department is, that the Secretary prepares drafts of reports to be made by the Minister, from the files of correspondence concerning the matters to be reported on, and from verbal information given by the Minister or the Deputy Minister. These draft reports are submitted to the Deputy Minister, examined and criticised by him, and such corrections as he indicates are made before the reports are submitted for the Minister's signature. The Deputy Minister, on examination before the Commission, did not seem to be willing to accept that degree of responsibility for the draft reports to Council which the Commission think incumbent upon him. While it is the duty of the Secretary to prepare draft reports, to the best of his knowledge and ability, responsibility for

the final form of the report lies with the Deputy Minister, and if he is unable to examine draft reports as carefully as their importance demands, the practice of the Department regarding them should be so revised as to provide efficient criticism, for it is in the highest degree desirable that reports to Council shall be accurately and fully expressed, so that they shall place before Council, by inclusion or reference, all the information which is necessary to correct judgment. If a draft report contains a reference to a question of law, the draft should be revised by the proper law officer; if it contains a reference to engineering matters, it should be examined by the Chief Engineer or one of his staff, so that statements and opinions made on technical matters shall be upon the responsibility of the proper technical officers.

DEPARTMENTAL IRREGULARITIES.

The Commission desire to draw special attention to the evidence given in this inquiry proving habitual breach of statutory provisions; to the persistent disregard of the authority of the Privy Council, and to continuous failure to keep the Council promptly and adequately informed of facts relating to public works. In November, 1908, two months in advance of any approval by the Council, Kirby & Stewart were informed that they would be awarded the contract for the wooden dam, and were so told in order that they might incur obligations, which were later referred to as an argument supporting a breach of law regarding tenders. In June, 1909, Kirby & Stewart were permitted to begin actual work before their contract was signed, an express violation of Section 17 of the Public Works Act. The Deputy Minister admits that in this particular the law is often violated. Because in March, 1909, the Council had authorized a work estimated to cost $108,050, the Department, four months later, after a complete change of location for the dam had been decided on, entered into a contract involving a cost which the Department then estimated would be $176,000. In August, 1911, the Department having decided to cancel the contract with Kirby & Stewart, authorized the Engineer in charge for the Department to commence work on behalf of the Government in advance of any authority of Council. No authority was given by Council at any time for entering into the agreement with Kirby & Stewart which was executed by the Deputy Minister on the 5th day of October, 1911, after the Government had been defeated and was about to vacate office. Emergencies may arise when action must be taken in reliance on the endorsement of Council, but too great liberty in this respect may easily degenerate into license. If the Council is a body too unwieldy for the prompt action desirable in many cases, the Treasury Board or some other Committee of Council might, perhaps, have power delegated to it to act in such instances as Ministers might bring before it.

After plans and specifications had been completed, and an estimate of the cost made in the month of June, 1909, no mention of the matter was made in writing to Council, or authority taken for the radical changes which had been decided on. In fact, the contract actually executed on the 22nd day of July, 1909, states that the estimated cost of the concrete dam was $108,050, the amount mentioned in the Order-in-Council dated the 20th day of February, 1909, whereas at the time the contract was executed, the Department of Public Works for more than a month had been in possession of an estimate by the Engineer in charge that the structure as then designed would cost $176,840. Not until the 4th day of January, 1911, was Council informed that this increased cost would be incurred, and then merely incidentally to a recommendation that an extra allowance be made to the contractors.

INADEQUATE STAFF IN DEPARTMENT.

From the facts already mentioned, and from a variety of others which are set out in the evidence taken before them, the Commission are of opinion that the staff of the Department of Public Works is inadequate in many respects for the work to be

performed. Having regard to the importance of the contracts which are being entered into from time to time, the law officers who frame the contracts of the Department ought to be men of pronounced ability, with large experience in the practice of the profession in commercial life, and especially with training in relation to the making and interpretation of contracts. The Department now refers to the Department of Justice those legal questions which seem of serious moment, but that involves great and unavoidable delay, and there is much legal work to be done in the Department from time to time with which its own law officers should be qualified to cope if the system of departmental law officers is to be maintained. Having regard to the very important and very rapidly growing amount of work which has to be performed, the permanent engineering staff should be much strengthened. The plans of the engineers in charge of work should be carefully revised and thoughtfully considered by a board or committee of experienced and able engineers. Under existing circumstances the chief engineer is not able to pay that close and particular attention to many matters, for which he is nominally responsible, and which the importance of these matters demands in the public's interest. Not only should proposed works be thoughtfully considered before obligations are incurred, but the progress of works from time to time should be inspected by competent engineers, not personally responsible for or in charge of the works, and who would bring to the work of inspection a freedom from personal responsibility which would allow them to give unprejudiced opinions. The Deputy Minister has too much work to permit him to pay close attention to details, and instances have already been cited in which the result has been unsatisfactory in consequence. True economy will be served by providing a staff thoroughly adequate in size and quality for the important duties which are being constantly performed by the Department of Public Works.

A report of the oral evidence given before us, and copies of such extracts from the documents examined by us as appear to be material, are appended as Exhibits to this report.

All of which is respectfully submitted,

ALFRED B. MORINE,
Chairman.

G. N. DUCHARME,
R. S. LAKE,
Commissioners.

Ottawa, 2nd April, 1912.

EXHIBIT 1.

(Copies of Reports to Council re Lake Timiskaming Dam Contract.)

DEPARTMENT OF PUBLIC WORKS OF CANADA,

P.C. 2631.

OTTAWA, November 28, 1908.

To His Excellency the Governor General in Council:

The undersigned has the honour to report:

That in answer to public advertisement the following tenders have been received for the construction of dam, bulkheads and slides at Head of Long Sault Rapids, Ottawa River, viz.:—

1. T. Sidney Kirby, R. Gordon Stewart	$ 76,000
2. Edward Conroy, David E. Conroy	98,000
3. Edward J. Rainboth	115,609
4. J. Lumsden	265,953

That the lowest tender is accompanied by an accepted bank cheque for $8,000 as a guarantee for the execution of the contract;

That the Chief Engineer estimates the cost of the work at $80,000;

That Parliament at its last session, voted the sum of $75,000 in connection with the above mentioned work, leaving a balance of $1,000 unprovided for to which should be added, for superintendence and contingencies, 10 per cent of the contract price, or in all, say $8,600.

The undersigned has, therefore, the honour to recommend that authority be given to accept the tender of T. Sidney Kirby and R. Gordon Stewart, of Ottawa, at $76,000, for the construction of dam, bulkheads and slide at Head of Long Sault Rapids, Ottawa river, and that Parliament be asked to provide the amount required to carry the work to completion, viz.: $8,600.

Respectfully submitted,

WILLIAM PUGSLEY,

Minister of Public Works.

P.C. 374.

DEPARTMENT OF PUBLIC WORKS OF CANADA,
OTTAWA, February 20, 1909.

To His Excellency the Governor General in Council:

The undersigned has the honour to report:

That an Order in Council was passed on January 18 last authorizing the acceptance of the tender of Messrs. Kirby & Stewart, the lowest of four received, for the

construction of a timber dam, bulkheads and slides at the Head of Long Sault Rapids in the Ottawa River, for a bulk sum of $76,000.

That action, however, has not been taken on this authorization, it being decided upon further consideration and fuller examination into the matter, that in view of the importance of the work, this being the key dam of the scheme for the conservation of the waters of the Upper Ottawa River, it would be preferable to have it constructed of concrete, in order to give it a permanent character and reduce the cost of annual maintenance. Moreover, a great factor in the cost of concrete in the case of dams is the cost of cofferdamming required, which in difficult locations may raise the price of concrete to much higher figures than those given. Cofferdamming will be required at Temiscamingue and unforeseen difficulties in unwatering may be encountered;

That the tenders above mentioned, in addition to a bulk sum price, give a unit price for each class of material, including cement, and applying these prices to the approximate quantities of material in the work, as determined by the Engineer, the amount of the various tenders for the construction of the dam of concrete would be as follows:—

1. Kirby & Stewart—approximately	$108,050
2. E. & D. E. Conroy—approximately	137,500
3. E. J. Rainboth—approximately	145,000
4. J. Lumsden—approximately	165,000

Messrs. Kirby & Stewart still remaining the lowest tenderers on the altered conditions; That attached is the schedule of itemized prices of Messrs. Kirby & Stewart's tender, which prices are considered fair and reasonable.

The undersigned, in view of the foregoing, has the honour to recommend that the Order in Council of the 18th January, above mentioned, be annulled and that authority be given, instead, to enter into contract with Messrs. Kirby & Stewart for the construction of a concrete dam, bulkheads and slides at the Head of Long Sault Rapids, in the Ottawa River, at the unit prices mentioned in the attached schedule, or an approximate total sum of $108,050, and that Parliament be asked to provide the further amount required to carry the work to completion.

Respectfully submitted,

WILLIAM PUGSLEY,

Minister of Public Works.

SCHEDULE of prices quoted in Messrs. Kirby & Stewart's tender for construction of dam, bulkheads and slides at head of Long Sault, Ottawa River,—

P.C. 2287.

DEPARTMENT OF PUBLIC WORKS OF CANADA,
OTTAWA, November 11, 1910.

To His Excellency the Governor General in Council:

The undersigned has the honour to report:—

That under authority of an Order in Council, dated 18th January, 1909, a contract was awarded to Messrs. Kirby & Stewart for the construction of a dam, bulkheads and slide at the Head of Long Sault Rapids, in the Ottawa River, for the sum of $76 000;

That the Ottawa River, at the site of the dam, is divided into two channels by an island. The dam across the channel on the Ontario side is now practically completed, and the coffer-dam for a section of the dam across the Quebec channel is nearing completion, and it is expected that it will be ready for the concrete work in a few weeks's time;

That, under ordinary conditions, concrete work is generally discontinued during winter months, but, in this case, it is of the utmost importance that the work be prosecuted uninterrupedly in order that it may be completed in time to remove the coffer-dam before the spring freshets, and prevent all possibility of higher floods than usual which would probably occur in the spring should any obstruction to the free flow of water be left in the bed of the river;

That the carrying on of the concrete work during the winter will necessitate the housing of the section of the dam to be built and the installation of a heating system to prevent the fresh-laid concrete from being damaged during freezing weather;

That this further work is not provided for in the contract and its estimated cost is placed at from $4,000 to $5,000, depending upon the severity of winter conditions.

The undersigned, in view of the foregoing, has the honour to recommend that authority be given to enter into an agreement with Messrs. Kirby & Stewart,—the contractors for the construction of the dam,—for the housing and heating of that portion of the concrete work to be constructed during the winter months, and to pay to them the actual cost of labour and materials necessary for the said housing and heating plus 15 per cent for incidentals, use of tools, office expenses, etc., upon the production of certified vouchers supported by a sworn declaration.

Respectfully submitted,

WILLIAM PUGSLEY,

Minister of Public Works.

P.C. 51.

DEPARTMENT OF PUBLIC WORKS OF CANADA.

OTTAWA, January 4, 1911.

His Excellency the Governor General in Council:

The undersigned has the honour to report:—

That, in January, 1909, an Order in Council was passed accepting the tender of Messrs. Kirby & Stewart to construct a wooden dam on the Ottawa river at the foot of Lake Temiscaming, their tender being the lowest of four received;

That, in March, 1909, a subsequent Order in Council was passed annulling the former and authorizing a change from wooden to concrete structure on the unit price system, for the different classes of materials, as per unit prices submitted in the original tender, Messrs. Kirby & Stewart still remaining the lowest tenderers, under altered conditions;

That the tenders were figured on the basis of quantities supplied by the engineer-in-charge at the time, the quantities being stated to be only approximate, on account of the uncertain nature of the foundations for that part of the site of the dam covered by water;

That, in applying the unit prices to the approximate quantities of excavation and materials in the work, as determined by the engineer, the various tenders were figured as follows, substituting concrete for wood:—

1. Kirby & Stewart—approximately	$108,050
2. E. & D. E. Conroy—approximately	137,500
3. E. J. Rainboth—approximately	145,000
4. J. Lumsden—approximately	165,000;

That, shortly after this, it was decided to form a special Bureau to continue the study of the Ottawa River Storage as well as to take charge of the construction work, and the new Engineer-in-Charge, in preparing detailed plans for the concrete dam, after authority had been given by the second Order in Council to change from wood to concrete, found it necessary to change the site of the dam and alter considerably the lines of the original plans, after further investigations of the bottom of the river which showed that solid rock where indicated on original plans did not exist—closely packed surface boulders under the water having evidently been mistaken for solid rock—and conditions generally not so favourable for safe foundations as expected;

That the dam, under these conditions, required a deep cut-off wall and wide aprons on both the up-stream and down-stream sides, to guard against all chances of undermining, necessitating much deeper and more extensive excavations than anticipated, requiring more plant to carry on the work and increasing considerably the cost of cofferdamming and unwatering, as compared with the work and expenditure which would have been necessary in connection with said cofferdamming and unwatering, under the original plans forming the basis of the tenders submitted;

That so far, about 50,000 cubic yards of material have been removed to secure safe foundations, and the Engineer estimates that 10,000 cubic yards more remain to be excavated in the deepest part of the channel, making a total of 60,000 cubic yards, as compared with 5,730 cubic yards given in the first estimate, in connection with original plans: the concrete also being increased from 9,700 cubic yards to about 13,000 cubic yards;

That the tenders received, based on the amended quantities and unit prices submitted, are now revised as follows:

1. Kirby and Stewart, approximately	$176,840 00
2. E. J. Rainboth, approximately	300,850 00
3. E. and D. E. Conroy, approximately	301,140 00
4. J. Lumsden, approximately	352,279 00

showing that Messrs. Kirby and Stewart are still considerably lower in price than the other tenderers;

That the Engineer reports that the contractors have so far executed their work in a first-class manner and have shown good will to meet the changed conditions, though obliged to secure a more expensive plant to carry on the altered work properly;

That the Engineer-in-Charge reports also that the amount of $4,000 bid by the contractors for unwatering has been all expended in the Ontario channel, and the most extensive and difficult part of the cofferdamming and unwatering, estimated to cost about $20,500, yet remains to be performed to complete the dam across the Quebec channel;

That, owing to an exceptional autumn rise of the water, the difficulties met with by the contractors have been considerably increased, and the work has reached such a critical stage that it is considered necessary, and in the public interest, to co-operate with the contractors in order to rush the work to completion and prevent all possible delays and thus derive the benefits of the reserve water at least one season earlier;

That the contractors claim that though they agreed to execute the work in accordance with the amended plans substituting concrete for wood, the change of site, the change in the section of the dam, the altered conditions in the foundations, have been so much greater than contemplated and expected, that they are entitled to consideration on account of the increased cost, due to these radical changes and alterations from the original plans, which formed the basis of their original tender.

The undersigned, in view of the foregoing, and after careful consideration of all the circumstances affecting the contract, is of opinion that the contractors have a just claim, and are entitled to consideration on account of the greater amount of cofferdamming and unwatering required, involving a larger expenditure, as above mentioned, and recommends that authority be given to pay to the contractors over and above the contract prices the actual cost of cofferdamming and unwatering necessary to complete the dam across the Quebec channel, including removal of said cofferdamming, plus the usual 15 per cent for incidentals, use of tools, office expenses, etc., upon the production of certified vouchers supported by a sworn declaration.

The undersigned also recommends, in order to attain the object in view, that the Order in Council of 22nd December, authorizing an extra expenditure of $4,000 to $5,000 for housing and heating the first section of the dam across the Quebec channel in order to lay concrete without interruption during the winter, be amended, and that

authority be given to enter into an agreement with Messrs. Kirby & Stewart to arrange to continue concrete work during the winter, for the whole length of the dam across the Quebec channel, at a total cost of $8,000 to $10,000 on the terms already approved for the section above mentioned, viz.; actual cost of labour and materials necessary for the said housing and heating, plus 15 per cent for incidentals, use of tools, office expenses, etc., upon the production of certified vouchers supported by a sworn declaration.

Respectfully submitted,

WILLIAM PUGSLEY,

Minister of Public Works.

P.C. 1847.

DEPARTMENT OF PUBLIC WORKS OF CANADA.
OTTAWA, August 5, 1911.

To His Excellency the Governor General in Council:

The undersigned has the honour to report:—

That under authority of an Order in Council dated 18th January, 1909, a contract was awarded to Messrs. Kirby & Stewart, for the construction of a wooden dam on the Ottawa River, at the foot of Lake Temiscamingue;

That, on 13th March, 1909, a subsequent Order in Council was passed authorizing the change from a wooden to a concrete structure, which necessitated considerable alterations in the plans and location of the work, and on account of these changes, and unexpected difficulties met with in the cofferdamming and unwatering necessary to build the concrete dam, on the Quebec side of the river, authority was obtained from Council, on 24th January, 1911, to pay the contractors, over and above their contract prices, the actual cost of cofferdamming and unwatering required, plus the usual 15 per cent for tools, profit, office expenses, contingencies;

That the attempt to build the concrete dam before the spring high water of 1911 has failed. The cofferdam was only laid dry after several months of effort to make it water-tight, on account of the unfavourable nature of the bottom. Work for only a few days was possible in the pit before the cofferdam was overtopped and part of it carried away;

That the small amount of excavation done in the bed of the river for the foundations of the concrete dam, before the cofferdam failed, showed the boulder material to be underlaid by water-bearing sand, and the Engineer in Charge and Assistant Deputy Minister of Public Works are, therefore, of the opinion that close sheet piling extending below the concrete cut off wall of the dam will be advisable as an additional factor of safety. They further recommend, in view of the difficulty experienced this season in passing the four million saw-logs that annually descend Temiskaming lake, that the design of the dam be changed so as to provide larger openings giving a thicker and longer apron for the Quebec sluiceways;

That Messrs. Kirby & Stewart have presented that it would be exceedingly difficult to continue the work under the present circumstances, owing to conditions entirely beyond their control. The close-sheet piling proposed in the foundations, they state, would largely increase their risks, by lengthening the period of difficult work to be done inside the cofferdam. The necessity for this sheet piling was not anticipated, and the work is not, of course, provided for in the contract;

That the Engineer in Charge and Assistant Deputy Minister report that, under the circumstances, it would be advisable, and in the public interest, not to proceed further with the construction of the dam as contracted for, and that the contract should be terminated at the present stage; the security cheque of eight thousand dollars ($8,000) deposited in connection with same to be returned to the contractors, and work already performed, materials delivered and plant supplied, to be paid for. The reconstruction of the cofferdam, erection of the concrete dam with modified openings for the passage of logs and sheet piling to be proceeded with by day's labour;

The undersigned, concurring in the views of his officers above mentioned, has the honour to recommend that the contract with Messrs. Kirby & Stewart, for the construction of a dam on the Ottawa river, at the foot of Lake Temiscaming, be cancelled, and that the security cheque of $8,000 deposited in connection with same, be released, also that the work already executed which may be considered as absolutely necessary be paid for at its actual and reasonable cost, payment for cofferdam and unwatering to be made as per terms fixed by Order in Council dated 24th January, 1911, the completion of the dam including such close-sheet piling in the foundation, and other alterations that may be found necessary to be proceeded with by day's labour, and further that the plant and materials on the ground be bought at a fair valuation based on actual cost supported by vouchers certified under sworn declarations.

Respectfully submitted,

WILLIAM PUGSLEY,

Minister of Public Works.

EXHIBIT 2.

AUDITOR GENERAL'S OFFICE, CANADA,
OTTAWA, January 28, 1909.

SIR,—Enclose please find Mr. St. Laurent's memorandum *re* 'Storage Dam at Foot of Lake Temiscaming,' which you left with me yesterday for consideration of the question whether, in view of the change in plan from Cribwork to Concrete, it might not be necessary to call for new tenders.

The present difficulty is, that a blank item-schedule (intended to be comprehensive and final) was attached in error to a form of bulk-sum tender, and described as 'Prices for extra work.' Prices were named by the tenderers, both for the bulk-sum and for the items; and it is fair to assume that the item-figures are tendered for extra work.

The contract was awarded to tender 'A.' largely as a result of low prices for Excavation and Timber. Tender 'A' named $8.50 for Concrete, as against $9, $10 and $8 from 'B,' 'C' and 'D.' (Attached please find prices paid for Body Concrete on Ontario canals, under contract; the localities being of course easier of access.)

To get a more permanent structure, it is now proposed to change the plan from timber to Concrete,—thus eliminating much of the timber, and increasing the Concrete to nearly three-quarters of the work.

If the question of the public interest in speedy completion is not raised, I do not think that the proposed precedent is a safe one to establish, when the Specification has been so radically altered.

Mr. St. Laurent explains in conversation, that one reason for letting the contract at an early date (without further advertising), is to allow the stop-logs and

other heavy timber to be prepared and delivered before spring-time, and thus enable the dam to be operative at the end of 1909, instead of at the end of 1910.

This would be accepted by the Audit Office as coming under chapter 7 of the Statutes of 1905, namely: 'The Minister.. .. .. shall invite tenders by public 'advertisement,.. .. .. except in cases of pressing emergency in which 'delay would be injurious to the public interest.. .. ..' This Departmental responsibility is not divided with the Audit Office in any way. It is for the Government to say whether the advantages of competition are more than offset by the urgency of the special circumstances.

Lower rates might be obtained on the increased quantities,—or perhaps higher; The saving of one season may not be worth the price paid for it: More experienced contractors might possibly be induced to compete on an improved specification; The extended time might be of use in elaborating the plans, which are present incomplete: All these are questions outside of the Audit sphere of control.

It occurs to me that, since Urgency affects the supply of Timber only, and not the Concrete, it might be feasible to separate the Stop-logs and other heavy timber from the rest of the work, and advertise it in a detailed bill for the Lumber Dealers to deliver on the site, cut to size. This part of the work could proceed at once, while plans and tenders are preparing for the Concrete Dam, to be let on a second contract, to builders of experience in that line, who would take the timber as supplied to them, and fit it into their own structure.

For any contracts let under 'Urgency' instead of 'Competition,' the prices will need to be certified 'Fair and just.'

I am, sir,

Your obedient servant,

J. FRASER,

Auditor General.

The Deputy Minister,
Public Works.

EXHIBIT 3.

—691-11.

OTTAWA, July 6, 1911.

SIR,—Replying to your letter of 19th May last, with reference to the works at present being carried out for your Department by Messrs. Kirby & Stewart in connection with the construction of a dam on the Ottawa River at the foot of Lake Temiscamingue;

It appears that in 1908 public tenders were asked for the construction of dam bulkheads and slides at Head of the Long Sault Rapids, Ottawa River, that the tender of Messrs. Kirby and Stewart, amounting to $76,000, was the lowest tender and that authority for the acceptance was given by Order in Council dated 18th January, 1909. This tender included a schedule of prices, though for what purpose does not, I think, appear from the papers before me. The Order in Council of January 18th, 1909, was never acted upon, as upon further consideration a different scheme of works was decided upon.

An estimate of the cost of the new works, based on the schedule of prices, showed, according to the statement in the Order in Council of 13th March, 1909, that Messrs.

Kirby and Stewart's price would be approximately $108,050, and that this would be lower than any other tenders received worked out in the same manner. The Order in Council of 13th March, 1909, annulled the Order in Council of 18th January, 1909, and gave authority to enter into a contract with Messrs. Kirby and Stewart for the construction of a concrete dam, bulkheads and slides at the unit prices mentioned in the schedule thereto, or an approximate total of $108,050. Such contract was entered into on 22nd July, 1909. On 24th January, 1911, an Order in Council was passed, which recites that the cost revised to that date amounted to $176,840, and gives authority for the payment of large additional sums to the contractors, beyond what they are entitled to under their contract.

You ask to be advised as to the legality of this Order in Council of January 24, 1911. I desire to point out, in the first place, that there is a substantial difference between the works originally proposed and for which tenders were invited in 1908 and the works now being carried out. It appears from the Order in Council of 24th January, 1911, that a concrete structure was substituted for a wooden one; that the site of the dam was changed; the section of the dam also changed; the conditions in the foundations altered; a large amount of work not originally contemplated involved, involving increased cost, due, as the contractors claim, to the 'radical changes and alterations from the original plans which formed the basis of their original tender.'

In these circumstances it is, I think, questionable whether section 36 of the Public Works Act should not have been complied with in respect of the altered project, and therefore, whether in view of the absence of tenders by public advertisement for the execution of the works, the Governor in Council had the power to authorize the contract. Assuming, however, that the contract as executed is *intra vires*, the facts may be such as to show that the increased payments provided for by the Order in Council of 24th January last were advisable or required in the public interest; and if so it cannot, I think, be doubted that the Governor in Council had the power to sanction them if the money necessary therefor be provided by Parliament.

Papers returned.

I have the honour to be, sir,

Your obedient servant,

E. L. NEWCOMBE,

Deputy Minister of Justice.

EXHIBIT 4.

AUDITOR GENERAL'S OFFICE, CANADA.

OTTAWA, April 1, 1911.

The Deputy Minister,
Department of Public Works,
Ottawa.

SIR,—Let me acknowledge receipt of your Application No. 922 for $7,977.90 in favour of Kirby & Stewart, for Coffer-dams, unwatering, etc., at the Temiscaming Storage Dam in January, 1911.

History of Work.

The contract for a concrete dam (instead of cribwork) was signed by Messrs. Kirby & Stewart in July, 1909, though work had been then going on for about two months.

The schedule-of-prices for the Concrete Dam was taken from the tender for the Cribwork Dam, including the item of $4,000 for all the Unwatering. The contractors objected that $4,000 was insufficient, but they signed the Contract notwithstanding. They also objected to the rates for Excavation.

The whole work, as carried through up to the present time, was specified and planned before the Contract was signed; there have been no subsequent changes of importance.

Unwatering the Complete Work.

The Unwatering necessary to carry out the Amended Specifications and plans, may be divided into three sections:—

(*a*) Coffer-Dam across the whole river, some distance north of the permanent sluiceways at the Island. This coffer-dam was to enable the river bed to be excavated down to 570;

(*b*) Coffer-dams above and below the sluiceways in the Ontario channel;

(*c*) Coffer-dams above and below the sluiceways in the Quebec channel.

Unwatering as Actually Performed.

(*a*) The northern Cofferdam was not built. The Contractors were relieved of the necessity of lowering the river-bed any further up-stream than a line 250 feet north of the platform in the Ontario Channel. The river-bed excavation up-stream from the 250 ft. line was assumed by the Department of Public Works, and this part of the work was done, partly by a gang of divers and blasters paid by the Department, and partly by the Departmental dredge 'Queen,' brought down from Haileybury. This was a double advantage to the Contractors, in that it not only obviated the construction of the cofferdam, but also relieved them of excavation at a rate which they claim is too low. An advantage of this kind should always be valuated, and charged to the Contractors.

(*b*) Engineer Coutlee estimates; that the two coffer-dams in the Ontario channel cost about $2,000 each, or $4,000, with (say) $2,000 for pumping: this estimate is not disputed by the Audit Office. The Unwatering of the Ontario channel alone will thus use up the $4,000 of the original tender.

(*c*) There still remains the unwatering of the Quebec channel, now in progress: and the Order in Council of January 24, 1911, proposes that the Government should intervene to relieve the Contractors, namely: 'That authority be given to pay the Contractors, over and above the contract prices, the actual cost of coffer-damming and unwatering necessary to complete the dam across the Quebec channel, plus the usual 15 per cent for incidentals.'

No Precedent for Increased Payment.

We have no record in the Audit Office, of any previous case of this kind, where an Order in Council amended a contract, in the direction of giving increased remuneration to a Contractor, over and above the amount of his tender.

If the Contractors are to be relieved by payment additional to their tender, the only way now apparent is to place a sum for them in the supplementary estimates for 1911-12, with a full description of the circumstances.

Total Cost of Unwatering Quebec Channel.

The items of cost are approximately these:—

1910, to December 31—say..	$14,000	
1911, January 1 to 24—say..	6,000	
		$20,000
1911, January 25 to 31—say..	2,000	
1911, February, $8,000, March, $8,000..	16,000	
		$18,000

Or about $40,000 in all.

If the Order in Council is to operate only after its own date, the $20,000 spent before January 24 would not be included; and the 'coffer-damming and unwatering necessary to complete the dam across the Quebec channel' would cost $18,000 or $20,000.

I am, sir,

Your obedient servant,

FREDERICK HAYTER,

for Auditor General.

The Assistant Deputy Minister,
Public Works Department.

EXHIBIT 5.

DEPARTMENT OF PUBLIC WORKS,
OTTAWA, July 12, 1911.

SIR.—We have the honour to state, regarding the construction of the Temiscaming dam, Ottawa river:—

That in January, 1909, an Order in Council was passed, accepting the tender of Messrs. Kirby & Stewart, to construct a wooden dam on the Ottawa river at the foot of Lake Temiscaming.

That in March 1909, a subsequent Order in Council authorized a change from a wooden to a concrete structure, which necessitated considerable alterations in the plans and location.

That, on account of these changes and unexpected difficulties met with in the cofferdamming and unwatering necessary to build the concrete dam on the Quebec side of the river, an Order in Council was passed in January 1911. This granted authority to pay the contractors, over and above their contract prices, the actual cost of cofferdamming and unwatering required, plus the usual 15 per cent for tools profit, office expenses contingencies, etc.

That the attempt to build the concrete dam before the spring high water of 1911 has failed. The cofferdam was only laid dry after several months of effort to make it water-tight, on account of the unfavourable nature of the bottom. Work for only a few days was possible in the pit before the cofferdam was overtopped and part of it carried away.

That the small amount of excavation done in the bed of the river for the foundations of the concrete dam, before the cofferdam failed, showed the boulder material to be underlaid by water-bearing sand. We are therefore of the opinion that close sheet-

piling extending below the concrete cut-off wall of the dam will be advisable as an additional factor of safety.

Owing to difficulty experienced this season in passing the four million sawlogs that annually descend Temiscaming Lake, we also desire to change the design to give larger openings. This change entails a thicker and longer apron for the Quebec sluiceways.

That in a communication addressed to the Department of Public Works, the Contractors themselves have represented that it would be exceedingly difficult to continue the work under the present circumstances owing to conditions entirely beyond their control. Further, they state that the close sheet-piling proposed in the foundations will largely increase their risks, by lengthening the period of difficult work to be done inside the coffer-dam. This sheet-piling like the unusual difficulties connected with unwatering, was not expected and so, not provided for in their contract.

In view of all these facts, we consider it advisable and in the public interest, not to proceed further with the construction of the work as at present contracted for.

That the contract should be terminated at the present stage by returning the security deposit to the Contractors, paying for work done and materials delivered and plant supplied. We also advise proceeding with the reconstruction of the coffer-dam, the construction of the concrete dam with modified openings for passage of logs, and sheet-piling by day's labour.

We therefore recommend that authority be given to take the necessary steps in order to arrive at a proper and final settlement with the present Contractors. That the work be paid for at contract rates, and also that coffer-damming and unwatering be paid as per terms fixed by Order in Council passed January 1911. That the plant and materials on the ground be bought at a fair valuation based on actual cost, supported by vouchers certified under sworn declarations. That the security deposited in connection with their contract, amounting to $8,000, be returned as there is no default. Authority is also requested to proceed by day's labour with the completion of the dam, including such close sheet-piling in the foundation and other alterations that may be found desirable, as the work progresses.

Respectfully submitted,

A. ST. LAURENT,

C. R. COUTLEE,

Eng. in Charge.

Honourable WILLIAM PUGSLEY,
Minister of Public Works,
Ottawa, Ont.

EXHIBIT 6.

This Agreement made in duplicate, the Fifth day of the month of October, in the year of our Lord one thousand nine hundred and eleven.

Between His Majesty King George the Fifth, represented herein by the Honourable the Minister of Public Works of Canada.

Of the first part:

And Thomas Sydney Kirby and Robert Gordon Stewart, Contractors, both of the City of Ottawa, in the County of Carleton in the Province of Ontario, Dominion of Canada, carrying on together the business under the name and firm of 'Kirby &

Stewart' hereinafter called the parties.

Of the second part,

Whereas, the said Kirby & Stewart, under authority of an Order in Council, dated 18th January, 1909, were awarded a contract for the construction of a wooden dam on the Ottawa river at the foot of Lake Temiscaming.

And whereas, on 13th March, 1909, a subsequent Order in Council was passed, authorizing the change from a wooden to a concrete structure, which necessitated considerable alterations in the plans and location of the work, and on account of these changes and unexpected difficulties met with in the cofferdamming and unwatering necessary to build the concrete dam on the Quebec side of the river, authority was obtained from Council on 24th January, 1911, to pay the contractors, over and above their contract price, the actual cost of coffer-damming and unwatering required, plus the usual fifteen per cent for tools, profit, office expenses and contingencies.

And whereas, on a report of the Committee of the Privy Council approved by His Excellency the Governor General, dated 11th August, 1911, the Minister was authorized, for reasons stated in the said report, to terminate the contract with the firm of Kirby & Stewart, and to return the security cheque of $8,000 deposited in connection with the same, the work already performed, materials delivered, and plant supplied to be paid for;

Now therefore this agreement witnesseth:—

1. That the parties hereto have agreed that the contract of the firm of Kirby & Stewart with the Department of Public Works, for the construction of a dam on the Ottawa River at the foot of Lake Temiscaming be cancelled, and that the security cheque of $8,000—deposited in connection with the same, be released.

2. That the work already executed, which may be considered as absolutely necessary, shall be paid for at its actual and reasonable cost.

3. That payment for the coffer-dam and unwatering shall be made as per the terms fixed by the Order in Council of 24th January, 1911.

4. That the plant and materials of the said Kirby & Stewart on the ground, be purchased and payment made therefor by the Department at a fair valuation, based upon the actual cost, supported by vouchers certified under sworn declarations.

In witness whereof the parties hereto have hereunto set their respective hands and seals the day, month and year first above written.

Signed, sealed and delivered by the Deputy Minister and countersigned by the Secretary of the Department of Public Works, in the presence of:
J. A. CHASSÉ.

J. B. HUNTER,
Deputy Minister of Public Works.
R. C. DESROCHERS,
Secretary.

Signed, sealed and delivered by the parties of the second part in the presence of:
J. A. CHASSÉ.

KIRBY & STEWART,
Per R. GORDON STEWART.

** (Copy of Draft Agreement.)*

THIS AGREEMENT made in duplicate, this day of , 1911.

BETWEEN:

HIS MAJESTY THE KING, represented herein by the Honourable WILLIAM PUGSLEY, Minister of Public Works of Canada,

Of the First Part.

and

THOMAS SYDNEY KIRBY, of the City of Ottawa, in the County of Carleton, contractor, and GORDON STEWART, of the said City of Ottawa, contractor, carrying on business under the firm name of KIRBY & STEWART,
Of the Second Part.

WHEREAS, the said Kirby & Stewart, under authority of an Order in Council, dated 18th January, 1909, were awarded a contract for the construction of a wooden dam on the Ottawa River at the foot of Lake Temiskaming:

AND WHEREAS, on 13th March, 1909, a subsequent Order in Council was passed, authorizing the change from a wooden to a concrete structure, which necessitated considerable alterations in the plans and location of the work, and on account of these changes and unexpected difficulties met with in the coffer-damming and unwatering necessary to build the concrete dam on the Quebec side of the River, authority was obtained from Council, on 24th January, 1911, to pay the contractors, over and above their contract price, the actual cost of coffer-damming and unwatering required, plus the usual fifteen per cent, for tools, profit, office expenses and contingencies.

AND WHEREAS, on a report of the Committee of the Privy Council, approved by His Excellency the Governor General, dated 11th August, 1911, the Minister was authorized, for reasons stated in the said report, to terminate the contract with the firm of Kirby & Stewart, and to return the security cheque of $8,000 deposited in connection with the same, the work already performed, materials delivered, and plant supplied to be paid for:

NOW THEREFORE THIS AGREEMENT WITNESSETH:

1. THAT the parties hereto have agreed that the contract of the firm of Kirby & Stewart with the Department of Public Works, for the construction of a dam on the Ottawa River at the foot of Lake Temiskaming be cancelled, and that the security cheque of $8,000 deposited in connection with the same, be released.

2. THAT the work already executed, which may be considered as absolutely necessary, shall be be paid for at its actual and reasonable cost.

3. THAT payment for the coffer dam and unwatering shall be made as per the terms fixed by the Order in Council of 24th January, 1911.

4. THAT the plant and materials of the said Kirby & Stewart, on the ground, be purchased and payment made therefor by the Department at a fair valuation, based upon actual cost, supported by vouchers certified under sworn declarations.

IN WITNESS WHEREOF the said the Minister of Public Works hath hereunto set his hand and seal and the said parties of the Second Part have hereunto set their hands and seals.

Signed, sealed and delivered in the
presence of:

* *This Draft Agreement was endorsed on the back as follows:—*

Dated. 1911.

His Majesty the King

and

Kirby & Stewart.

Agreement.

Chrysler, Bethune & Larmonth,

Barristers, Ottawa.

PUBLIC SERVICE COMMISSION

1912

SPECIAL REPORT

ON

SOREL SHIPYARD.

Marine and Fisheries Department.

To His Royal Highness the Governor General in Council:

May it Please Your Royal Highness,—

The Public Service Commission have the honour to present a report concerning the shipyard at Sorel, in the Province of Quebec.

The Commission were fortunate in obtaining the services of Mr. W. S. Jackson, a practical shipbuilder of long experience, and of Mr. T. H. Schwitzer, a mechanical engineer, to investigate closely the physical conditions of the shipyard, and the methods of work pursued there. Their report, submitted herewith, has the approval of this Commission. Messrs. Price, Waterhouse and Company of Montreal, chartered accountants, were employed by the Commission to investigate the books and accounts at the shipyard, and their two reports are also forwarded herewith. These also have the approval of this Commission. It will be noticed that so far as they touch upon the same subjects, the reports agree with one another.

The Commission also submit a report of evidence given before two of the Commissioners at Sorel. The Commission have not thought it necessary before reporting to take any more evidence than is here submitted, as it did not appear probable that anything further could materially affect the conclusions at which the Commissioners had arrived.

Upon the three reports, the evidence submitted, and the personal observations of the two Commissioners, we make the following findings:

(1) There has been grave mismanagement in the conduct of the operations of the shipyard. Great waste has resulted, and the conditions which have existed for some time demand that drastic reforms shall be instituted.

(2) This grave condition of affairs is chiefly due to three facts:—

(*a*) For several years the direction has not been under a practical shipbuilder, and has been inefficient.

(*b*) A sufficiently close connection has not been maintained between the shipyard and the Department of Marine and Fisheries; *i.e.*, there has been little or no inspection and control from headquarters of the operations at the shipyard.

(*c*) The Director has submitted too completely to political pressure from candidates or supporters of the government for the time being. Those working in the shipyard have come to feel that the shipyard is a political institution, and have not been inspired with the knowledge that good work is the prime requisite to continued employment.

(3) The shipyard has been maintained principally for two purposes:—

(*a*) The repair of dredges and other craft engaged in the work of the St. Lawrence ship channel and otherwise, and

(*b*) The construction of dredges and other craft for the ship channel and for other purposes.

The repair work chiefly takes place in the winter. In the summer, the larger portion of the work has been the construction of new dredges and other craft. It has been suggested that construction work at Sorel should be abandoned, and that the dredges and other craft required for the Governemnt service should be obtained by tender and contract from private builders. This suggestion has been based upon the undoubted fact that the cost of construction at Sorel has been larger than it should have been, and has been increasingly expensive. It is said that the government can obtain the craft it requires more cheaply by the tender and contract system than by

building at Sorel. We find that if construction in the summer time be wholly abandoned, there will not be sufficient work to maintain the skilled workmen necessary for repair work in the winter. Sorel is too small a place to afford employment to many such workmen except in the shipyard, and consequently efficient repair gangs will not be readily obtainable. For this and for other reasons we think it desirable that construction work should be continued at Sorel, if arrangements can be made so that there will be a closer approximation between the cost at Sorel and by tender and contract. With the plant which is now at Sorel, supplemented in certain particulars, it is possible for the shipyard at Sorel under competent management to construct dredges and other craft as speedily, cheaply and well as by private shipyards. We believe that if a thoroughly competent practical man can be placed in charge of construction, the cost, quality and speed of the work done will justify the maintenance of the shipyard, not merely for repair work, but for construction work also. We suggest that as a test of what can be done under capable management, a practical and experienced shipbuilder shall be placed in control, and an order now be given for the construction of a dredge or other vessel, and another order be given at the same time for a similar dredge or other vessel to a private contractor, and that those connected with the shipyard shall be informed that the result as to the cost, quality and speed of the work will largely determine the question of the future maintenance of the shipyard as a point for construction. To place the shipyard at Sorel in a position to do the best possible work, reforms must be made, and the best results cannot be attained speedily, but nevertheless the test proposed would be a valuable one.

In view of the large cost of installing and maintaining shipyards, and the prevailing tendency to merge large industries, it is desirable that the Government should maintain shipyards of its own, even though the cost of the work may sometimes be greater than for similar work by tender and contract, having in view the value of such shipyards as regulators of prices, and as instruments for preventing monopolies.

(4) We find also that having regard to its situation on the St. Lawrence, and to quality and the quantity of labour obtainable, Sorel is well situated as the site of a shipyard. The evidence goes to show that the men employed in the shipyard are competent, and that if they can be impressed with the knowledge that political considerations will not be invoked to excuse them from doing the best they are capable of, they can produce good results. They should be given to undersand that the official in charge of the shipyard will not be interfered with in the exercise of authority to employ and to dismiss, and that partisan political considerations will not be permitted to exercise any influence over the operations at the shipyard.

(5) We find that the person in charge of the practical operations should be supreme in the control of the yard, but that he should be advised in the exercise of that authority by a Board constituted of the Assistant Director and the Chief Accountant. The Superintending Engineer of the Ship Channel might be asked to sit on this Board when at Sorel. Regular meetings of the Board should be held, at least weekly, the Director presiding, and minutes of its proceedings accurately kept, and a copy of these minutes transmitted each week to the Department at Ottawa. It should be clearly understood that the supreme authority of the Director is not lessened by the existence of this Board, whose functions should be merely consultative and advisory. The Assistant Director should have immediate charge of all the correspondence, subject, of course, to the Director, and be helpful to the Director in every possible way. The Chief Accountant at the shipyard, though subject to the Director, should also be placed under the authority of the Chief Accountant of the Department at Ottawa, and should report periodically. The practical operations of the Shipyard should be inspected from Ottawa, at least once in three months, and perhaps oftener, and the Chief Accountant at Ottawa should cause the accounts and books at the shipyard to be inspected at least once in three months. One of the

causes of trouble at the shipyard has been the feeling of detachment from and complete independence of the Department at Ottawa, except, perhaps, in the recognition of the direct authority of the Minister of Marine and Fisheries over the Director at Sorel.

In our opinion it is essential to the successful prosecution of work at the shipyard that every vestige of political patronage should be destroyed, and that the men employed there should be made to realize that neither employment nor dismissal shall be affected in any degree by partisan considerations. The men in charge of operations should be convinced that the best possible results in the form of work done are expected of them, and that to produce these they will be given authority as well as responsibility. If the Director wishes to dismiss men for incompetency or other cause, or because the number employed is too large, he should not only have authority to do so without referring the question to the Department, but should be instructed that he is not so to refer a matter which is solely within his discretion. If foremen or labourers are required, the Director should employ the best men he can obtain, and not be restricted to choose from lists supplied to him by the Department or from any other source. In this way, the Department will be relieved of much unpleasant work, and also of fault-finding criticism, and at the same time the quantity and quality of work done will show vast improvement. No objection can be made to the receipt of recommendations from any persons who desire to procure employment for men, and lists of such recommendations should be kept at the shipyard for reference, but the point is that the Director should not be cribbed, cabined and confined in the exercise of his authority by the existence of such lists. No person unworthy of being entrusted with the exercise of such powers should be placed or be continued in charge at Sorel, and no person could succeed there without enjoying the complete confidence of the Department and possessing the authority indicated.

We suggest that when a new Director has been appointed, the Minister of Marine and Fisheries shall publish to those employed in the shipyard a statement expressive of the principles on which operations shall be continued, for the purpose of aiding the new Director, by an unmistakable announcement of what will be expected from all those employed in and about the shipyard. This course is proposed because unrest has been created by partisan agencies, and there is grave necessity for restoring discipline and displaying authority.

We are of opinion that hereafter, the person in charge at Sorel should be designated Superintendent, and the present Assistant Director be known as Assistant Superintendent, as significant of the closer relations hereafter to be maintained between the Department and the shipyard.

In the report to the Commission by Messrs. Jackson and Schwitzer, very many improvements which should be made in the shipyard have been pointed out, with a view to convenience, to the saving of expense and to the performance of more and better work. While endorsing the suggestions therein made, the Commission feel that the practical working out of these proposed improvements should be left to the discretion of those charged with the direction of affairs at Sorel, and that the support of the Department of Marine and Fisheries and of the Government should be given to these officials in all attempts to improve the physical condition of the shipyard and all that appertains to it. If the direction of the shipyard be competent, and if the close connection with the Department which is here recommended be maintained, all necessary improvements will undoubtedly follow as quickly as may be expedient.

The Commission draw special attention, however, to questions which arise with reference to a lease of the land on which a principal part of the shipyard buildings have been placed. That lease contains a provision for the purchase of the land by the Government, and having regard to the value of the works placed on the land by the Government from time to time, and to the situation of the land on the

Richelieu River, it should be seriously considered whether the land should not be purchased at once, if the shipyard is to be maintained and improved. It has been suggested that the leased land can be abandoned, and the operations of the yard carried on further down the river, but this would involve considerable expense, and the location might not be so convenient for certain purposes. This matter, however, is one on which the Commission have not, at present, sufficient information to express an opinion, and, therefore, content themselves with drawing attention to the subject.

Hitherto the Director has resided in the town of Sorel, on the side of the Richelieu River opposite to the shipyard. This has made close touch and observation of the yard somewhat difficult. We find that the new Director should be provided with a residence near the shipyard, and have been informed that a suitable place can be obtained at a reasonable price.

The Commission informed the Minister of Marine and Fisheries, some days ago, of its intention to make a finding to the effect that it was desirable to appoint a practical ship-builder in place of Mr. Papineau, the Director of the shipyard. It has since been announced that Mr. Papineau has resigned, and the question of the qualifications which should be possessed by the man to be appointed as his successor is properly open for observation. It has been said that as the labourers at the shipyard are almost exclusively French-Canadians, and few of them able to speak English, the new Director should be a French-Canadian, or at least able to speak French; that otherwise dissatisfaction may prevail amongst the labourers, and the new Director find his position very difficult and unpleasant. After inquiry regarding this matter, the Commission are persuaded that not much weight should be attached to these considerations. As to the language question, it is sufficient to point out that while ability to speak French would undoubtedly be an advantage to the Director, yet such a qualification is not indispensable, for the Assistant Director and other officials at the shipyard are capable of speaking both languages, and the orders and instructions of the Director from time to time could, without difficulty, be conveyed to those persons who would have the oversight of the performance of such orders and directions. The matter of supreme importance is that in experience, ability and character, the Director should be a man capable of impressing himself and his authority upon those employed at the shipyard. The dredges and other craft constructed and repaired are of steel and iron, and, therefore, an extensive knowledge by the Director of steel and iron shipbuilding is a prime requisite; experience in the control of large numbers of shipbuilders is another requisite; tact and discretion in the handling of men is a third requisite. Labourers are very quick to observe ignorance or other incapacity on the part of their superiors, and they very soon lose confidence in the direction of any man who does not know his business practically. On the other hand, they have respect and confidence in the man whose conduct evinces a through knowledge of the subject over which he has control. No greater injury could be inflicted upon the Sorel shipyard, and all those who have employment in it, or are otherwise concerned about it, than that the direction of its affairs should be in the hands of an incompetent or inexperienced man. Such a continuance would necessarily result in the termination of construction work at the shipyard, and the non-employment, therefore, of one half, perhaps, of the force which has hitherto been maintained; and as we have already pointed out, this would make it difficult to obtain repair gangs, and consequently it might happen that the existence of the shipyard, as a place for repair work, even, would be terminated. We are satisfied, therefore, that an effort should be made to obtain for the practical direction of the affairs of the shipyard, the ablest, practical and experienced ship-builder of steel and iron vessels whose services can be procured, without regard to the question of racial extraction or of language. A decision that this shall be the case, and an appointment of a Director upon the sole ground of his qualifications as a ship-builder, will of itself be a significant intimation of that new policy which alone can justify the continuance of

Sorel as a place for construction, and which, if successful, will lead on, by and by, perhaps, to the enlargement of the yard, and the establishment of a great national place for the construction of vessels not merely connected with dredging, but with the whole service of the Dominion.

All of which is respectfully submitted.

ALFRED B. MORINE,
Chairman.

G. N. DUCHARME,
R. S. LAKE,
Commissioners.

Ottawa, 31st May, 1912.

SUB-REPORT re SOREL SHIP YARD No. 1.

BY MESSRS. W. S. JACKSON AND T. H. SCHWITZER.

To the Public Service Commission:

GENTLEMEN,—In March last you requested the undersigned to undertake an investigation of affairs in the Mechanical and Practical Departments of the Government Ship Yard at Sorel, P.Q.

Accordingly we proceeded to Sorel, and from the 11th March to the 5th April, were continuously engaged in examination of all parts of the Ship Yard coming within that scope, and of all officials and employees connected therewith.

As a result, we have the honour to present a report, arranged under various headings indicative of the subject or branch of work under review; and submit therewith appendices referred to in the report.

* We also present for reference plans and blue prints of the whole Ship Yard, parts thereof, and various craft under construction therein. The report follows:—

GENERAL DESCRIPTION.

The yard is under the Marine and Fisheries Department, and all instructions regarding the work to be done at the yard are issued by this department, and are issued by the Minister or Deputy Minister. The yard is under the supervision of Mr. Papineau, who has the title of Director of the yard. Mr. Papineau has under him and reporting direct to him the Assistant Director, Accountant, Cost Department, Paymaster, Timekeeper and Storekeeper. The Assistant Director, Mr. Terreault, has under him all the different shops, ship yard and drafting office. Mr. Papineau has held his present position for about two years, previous to which time he was for about one year Assistant Director under Mr. Desbarats, coming to this position from the Department of Public Works, where he was employed as a civil engineer.

The yard shows a remarkable lack of proper control, discipline and proper regulation throughout all departments. Wherever you go you can find men in bunches of six to twenty loafing around, comfortably seated around a fire, smoking and some of them even asleep. This loafing is very apparent, yet no action whatsoever seems to have been taken to stop it. A certain amount of this can be attributed to the fact that the yard is overstocked with men, and it must be hard at times for a foreman to find work for all the men under him. Six and seven men are seen doing the work of two or three. One foreman on being asked why he used so many men on a certain work remarked, that he had "to keep them busy, and if they were not doing that there would be nothing else for them to do." The Assistant Director or the foremen have very little or no authority over their men. They cannot discharge a man, being only able to report him to the Director. The Director reserves for himself the right of employing or discharging all men; he does this from purely personal reasons, being afraid of the political side of the affair, as his evidence will show. The fact of his doing this takes away from the heads of departments and foremen the proper authority they should have over the men to control them.

* Plans not printed.

The yard has practically no general supervision as the Director and Assistant Director spend nearly all their time in their offices. We have never seen either the Director or Assistant Director out in the yard supervising the work during the time we were there. We can see the effect of this lack of proper supervision throughout the whole yard.

The yard is located on the southwest shore of the Richelieu River, and extends to the River St. Lawrence. The yard is located on part government property and part private property, an annual rental of $1,200 being paid for the private property. No taxes or insurance are paid on any of the property. The property owned by the government comprises an area of about 80 acres, but only about 14·5 acres of this property is at present in use. The property owned by the McCarthy estate comprises an area of about 9·7 acres, making a total area of 24·2 in the present yard.

The buildings are mostly of wood construction, built on piles on account of the swampy nature of the ground. The only brick buildings being the old power house, which is now used for boilers and the upper floors for pattern storage, and the new power house which is of comparatively new construction. Some of the buildings are in very poor condition, and all are exceptionally dirty and poorly kept. The list of buildings, their use and condition of same is shown in Appendix "A." There are a large number of small buildings, shanties, watchman's house, &c., scattered all over the yard. These should all be torn down and scrapped, as they are simply loafing places for the men. These houses all have nice comfortable seats and lounging places, with a nice warm fire nearly always burning. The whole yard wants a general cleaning up and overhauling, scrapping a lot of useless material, &c., which is lying all over the place. All the buildings should be gone through and a thorough cleaning given to them all, using whitewash without sparing it, as it is cheap and badly needed. The shops all have heaps of scrap of all kinds lying all around inside of them, which should all be cleaned out and make the buildings present a neat and tidy appearance. They have enough labourers in the yard to do this work without in any way interfering with their present operations.

The yard is equipped with a very good industrial railway system which is shown on the yard plan marked Appendix "B."* The railway is only used in the summer time being allowed to remain covered with the snow all winter; all the heavy moving being done with horses and sleighs. The principal lines of this railway could be easily kept clear of snow during the winter months, and all heavy material carried on this railway, thus doing away with a great deal of teaming work. This railway should have extensions running to all wharves for the convenience of handling material. Should the yard be retained as a repair yard only, the present location is suitable and would be satisfactory for this work. Should the yard carry on both construction and repair work we consider it would be advisable to move the yard towards the St. Lawrence river, thus giving better facilities for launching, and bringing the stores closer to the construction, thereby saving a great deal of time and labour. The present buildings could be moved to new locations doing away with the rented property altogether. The outer end which at present is low lying land and covered with water during high water period could easily be reclaimed and made of service to the yard.

The yard at the present time is practically accessible to everybody, and has no means of keeping strangers out, strangers wandering at will throughout the yard and engaging in conversation with the men. The yard should be completely enclosed with a fence as shown on plan marked Appendix "B"*—thus providing only one entrance to the yard. The office should be so placed that it should not be necessary for anybody having business in the office to enter the yard.

The offices are very poor and not in keeping with a government yard at all. They are too small, low ceilings, badly lighted and ventilated, in fact some of them are so

* Not printed.

crowded that the air is impure. The toilet accommodations for the number of office staff is sadly inadequate, badly placed and not kept properly cleaned as they should be. We would recommend that new offices be built at the main entrance gate as mentioned hereinbefore. No strangers should be admitted to the yard without a pass signed by the Director.

The fleet during the winter months could be enclosed with portable fences similar to snow fences used by the railway companies; these fences could be locked together during the winter and stored away during the summer months.

The boats are all launched in the Richelieu river, the river being about 500 feet wide and 25 feet deep where the largest boats are launched. The longest boat ever built at the yard is 270 feet. The longest boat they could launch at the yard with present facilities is about 300 feet long. Boats of greater length could hardly be safely launched with present facilities and difficulties in the way. A basin could be very easily dredged opposite the ship yard so that longer boats could be built and safely launched. The present conditions will permit of the building of two large boats, two small tugs and three or four scows at the same time.

The yard is equipped with two so-called marine railways, but these are not really marine railways at all, being ordinary hauling-out ways. These ways are used to haul boats out for repairs to hulls, propellors, &c. The new ways will accommodate a boat of about 1,000 tons displacement, while the old ways are used for small boats such as tugs and scows, &c.

The organization of the yard is shown on organization chart marked Appendix "C." The organization is well laid out, if properly carried out, but it is not in this case. The accountant does not know what the storekeeper is doing, nor does the Assistant Director know half the time what the foremen are doing, these men very often going to and getting their instructions from the Director which does not tend to help good management in any way.

The whole ship yard wants to be completely overhauled, and something drastic must be done to bring the yard into good shape. The Director should be a shipbuilder and his assistant and foremen must be men of calibre and of good modern practices. The men must be handled in such a way as to let them see that their superiors know what is required of them, and if they won't fall in line, pick up and stir themselves, the foreman must have power to discharge them. The yard will never be up to date or capable of any good economical work until about three-quarters of the present employees are discharged and new blood put in.

A proper set of rules and regulations should be drawn up and posted throughout the yard. The men should be given to understand that these rules and regulations would be carried out to the letter. At present the yard has no printed rules and regulations, everything being done verbally.

The Director must himself appear frequently in the early morning and his assistant every morning to see the men started. He and the foremen should consider it part of their duty to be at different parts of the yard every starting and stopping time, and make the men stay at their work until the whistle blows.

The Director, Assistant Director, Accountant, Cost Clerk, Timekeeper, Paymaster and all foremen were put through a cross-examination as to the methods of working, &c., of the various departments. These questions with their respective answers will be found in Appendix "D."

PURCHASING OF GOODS.

All goods or materials at the present time are purchased through the general purchasing agent at Ottawa. Any material for stock is ordered by the storekeeper who just uses his own judgment when new stock is required, having no maximum or minimum amount placed on any thing in stock. The storekeeper makes out a requisition on the Director, who in turn makes out a requisition on the general purchasing

agent at Ottawa. The general purchasing agent gets prices on goods, and orders them as he thinks best. This procedure takes on an average a month's time before the goods are ordered. The general purchasing agent sends a copy of his requisition to the yard on which is the firm from which goods are ordered with the price to be paid for these goods.

All goods bought on samples should be properly checked by sample by a competent man. All goods ordered from Ottawa by sample should have the sample returned by Ottawa to the yard. All goods received at the yard and not according to sample should be returned immediately. This has to be done only a few times before the shipper of the goods becomes aware that goods have to be according to sample. At the present time this is not done, as there is generally some compromise made and the yard retains the goods sent although in some cases they are of a much inferior quality. The invoices and goods are all checked from this requisition. All goods are first put into stock and entered on stock books and are withdrawn from stock on requisition forms from the foremen or heads of departments. We consider that a great deal of time and money could be saved if all standard material was purchased on yearly contracts. These contracts could all be arranged by the general purchasing agent and copies of all these could be sent to the yard. The Director could then order direct from manufacturer, and thus save a lot of time and unnecessary work at Ottawa and the yard. Copies of all orders for material could be sent to Ottawa as a check on the amount of material ordered.

In making basis price contracts for supplying steel plates and shapes for construction purposes, a rolling margin of 2½ per cent over and 2½ per cent under calculated weights ought to be insisted upon, and every invoice calculated and rectified before being passed for payment.

A list of extras for steel material, tapered plates and plates under a certain width, also angles under a certain size should be agreed upon in the contract, and all extras carefully noted. All such material bought should be stamped L.R., and test certificates supplied and attached to the invoices.

All castings and forgings contracted for by weight should be carefully checked by the drawing office staff and any extra weight over the drawing calculated weights should be deducted from the invoices before being passed for payment. All structural steel castings should be tested according to Lloyds Rules and Regulations and test certificates supplied with each casting.

The stock of goods carried at the present time is far in excess of that required; this is partly due to the length of time it takes to get goods by the present system.

EMPLOYMENT.

The method at present in vogue of employing and discharging men is not such as would be used in any well organized yard. The Director does all this himself, for the reason that nearly all men engaged in the yard come with letters addressed to the Director. This should be done away with, and nobody should be taken on unless absolutely needed. When any new men are required in the yard the Director should not have to deal with this at all, it should be left in the hands of a reliable man who should be allowed to hire the best qualified man for the position, consulting with the foreman as to the man's qualifications. This man should keep a record of all men engaged, all applicants for work with their qualifications, and report to the Director or Assistant Director whenever a new man is engaged, stating for which department the man was engaged. The foreman should be the judge as to whether a new man is required in his department, and should notify the employment clerk when he needs a new man, stating what qualifications he requires in this man. The employment clerk could then look over his list of applicants and pick out from this list the man most suitable for the position, and refer these to the foreman for his approval. The

foreman should have the authority to discharge what men he sees fit and then make him in every way responsible for the output of his department. When any man is discharged by a foreman the foreman should notify the employment clerk giving reasons for discharging the man, the employment clerk keeping records of all men discharged. All foremen and heads of departments should be engaged or discharged by the Director without any outside interference, leaving it to his judgment as to the best man for the position. The employment clerk should make a weekly return to the Director showing the number of men employed in each department of the yard.

The men are paid time and a half for over-time work. The amount of over-time work at the yard is comparatively small. The yard has two days for which they receive pay. They are allowed half day on Victoria Day, half day on Dominion Day, and the whole day on Labour Day. They have made a compromise with the Director and work all Victoria Day and take all of Dominion Day off. The rest of the holidays for the yard is without pay. The following is a list of holidays for the yard force:—

New Year's Day.—Closed for about 7 or 8 days. The Director posting a notice as to the length of time yard is closed.
Epiphany.—Closed all day.
Ash Wednesday.—Closed in the morning.
Good Friday.—Closed in the morning.
Ascension Day.—Closed all day.
Victoria Day.—Work all day.
Dominion Day.—Closed all day. Paid.
Labour Day.—Closed all day. Paid.
All Saints' Day.—Closed all day.
Christmas Day.—Closed all day.

In July or August each year the men without any permission take about three days for the purpose of fishing or going to the races. All the yard, except office, is closed down during these days. It has become an annual practice for the men to do so. This practice should be done away with at once.

The working hours of the yard are from 7 a.m. to 6 p.m., from March 1st to October 1st, and from 7 a.m. to 5 p.m., from October 1st to March 1st, one hour being curtailed on account of darkness. The hours for outdoor workers should be further curtailed during the winter months. The yard is allowed one hour and five minutes for lunch.

The office staff get paid for all holidays, and are allowed about ten days with pay during the summer months. The office hours are from 8.30 a.m. to 5 p.m. the whole year around. The office staff is allowed one and a half hours for lunch. The following is a list of holidays for the office staff:—

New Year's Day.—Closed for 2½ days.
Epiphany.—Closed all day.
Ash Wednesday.—Closed in morning.
Good Friday.—Closed in morning.
Ascension Day.—Closed all day.
Victoria Day.—Work all day.
Dominion Day.—Closed all day.
Labour Day.—Closed all day.
All Saints' Day.—Closed all day.
Christmas Day.—Closed all day.

The office staff during the summer months get every alternate Saturday off. The office staff and foremen's wages are such as to cover over-time and holidays.

STOREKEEPER.

This department is divided up and scattered all over the yard. All small stores are located in same building as the office, while the larger stores are located in various other buildings. The rivets, nails, &c., are stored in a separate building which is about as far away from the construction as it could well be. The wire and manilla ropes are in another separate building; castings are lying pretty much all over the yard and the storekeeper has no way of keeping proper track of these. The stores should be consolidated into one large building and a good fence built around all castings so that it would be impossible to get any stores without the storekeeper's knowledge. All goods are received and checked by the storekeeper and entered with prices on the stock books as received. All goods bought for the yard are first charged to stock and then charged against the job. All goods are given out of the stores on requisitions from the foremen or other heads of departments who state on requisition the job number for which the material is required. The requisitions are entered on the stock books on the debit side, the price of the material is marked on this requisition by the storekeeper and then forwarded to the cost department where it is charged against the job. This requisition is only made in single copies, there being no carbon copies made by any department. This requisition should be made with carbon copy so that the storekeeper could have a copy for his own file for reference, the original being sent to the cost department as before.

The storekeeper has 11 men under him to handle the stores, keep the stock books and check all goods as received. This seems a very large staff for the work to be done. The men should be assigned to certain definite parts of the storehouse, that is they should have one man look after all castings, plates, angles, &c., another man to look after all pipe fittings, valves, &c., and these men should check all these goods when coming into stock and should give out all stores from their respective branches, thus making these men in every way responsible for the stock under their charge. By the present method of every man in the store department having access and the giving out of any class of goods makes it so that no one man can be held responsible for goods. All goods received are checked from copy of requisition sent from Ottawa both as to prices and material. The head storekeeper signs and passes all invoices as to goods being received, the price being right, and the extensions correct. The head storekeeper should only sign invoices as to goods being received and should not check as to price and extensions; this is the accountant's work. The invoices are sent from the store department to the accountant who again certifies as to the amount being correct, &c., and then passes the invoice on to the Director who certifies the invoice for payment, the invoice is then sent to Ottawa where a cheque is issued covering the invoice. This entails a duplication of work, and should not be necessary at all. The storekeeper can sign for goods received, the accountant can sign for prices and extensions and send the invoice direct to Ottawa; the accountant making a bimonthly statement of all invoices passed and submitting this to the Director for his information. The present value of the stock is an unknown quantity as no records or inventory has been taken for three years, an inventory is being taken at the present time. This inventory should be checked against their stock books to see how they tally. They carry on an average, stock for about six months ahead which is quite unnecessary. All goods bought on sample are checked by the store department, they generally send out the sample from the yard and then check goods when they come in from what they have at present in stock. When goods are not as sample the Director takes the matter up with Ottawa and the disposition of the goods is settled by Ottawa.

SCRAP.

All scrap material is sorted out as scrapped and is stored in piles at far end of yard according to the kind of material. All brass scrap is kept under lock and key,

and is overhauled by the stores department before selling. There are no records kept of what is scrapped, the material being scrapped by the foreman in each department. The purchasing agent at Ottawa writes to yard about once a year asking them for approximate amount of scrap on hand; on receiving this information the department at Ottawa calls for tenders for scrap material and gives the contract to the highest bidder. The yard is notified by Ottawa to this effect. The checker of goods of stores department looks after all the scrap and looks after the weighing and loading of same and is entirely responsible for this scrap. There is no check on this man whatsoever as to weight or material given out as scrap. This should all be checked up by an assistant.

TIMEKEEPING.

The men's time is kept by a timekeeper and his assistant. The men punch time clocks of the card type, a man takes a card out of a box hung on wall, inserts the card in the clock and returns the card to another box on the opposite side of the clock. Each clock is looked after by a different man who gets 20 cents per day extra for this work, and who sees that the boxes are locked and unlocked at the proper time. Each clock box is unlocked about fifteen minutes before starting time and is supposed to be locked sharp at 7 a.m. and 1 p.m., and the clocks are not supposed to be opened again till 9.30 a.m. and 3 p.m., when any man coming in late is allowed to punch and loses a quarter day. That this rule is not carried out is shown by looking over the time cards which show many men punching at different times, some punching as late as 7.50 a.m. without being docked, getting a full day's pay. The punch keeper of each clock submits a report, scribbled on any old piece of paper, every morning and afternoon to the timekeeper, of the name of the men with their clock number, who are absent. The punch keeper gets this record by simply looking over the cards that are remaining in the incoming box. The timekeeper looks over these reports and marks the men's time in the time book according to these reports and never check's the men's time from the clock cards. The record of men's time shown on cards is simply ignored, so that at present the time clocks are absolutely useless and may just as well be out of use altogether. The timekeeping system throughout is very lax. The time cards are only returned to the timekeeper once a fortnight, but the men's time is all made up before the time cards arrive. The keys for time clocks are supposed to be returned to a board for that purpose in timekeeper's office at 7 a.m. and 1 p.m. every day and also before leaving at night. The keys we find are not returned regularly to this board and nobody appears to keep any check on them. We observed this for several days, and hardly ever found a key hung on the board. We have left the office at 7 p.m. and there was not a single key in the place, the men evidently carrying them home in their pockets. The clocks are apparently never looked after properly, as we found cards that the figures were so indistinct on that it would require a magnifying glass to make them out. They have a man in the blacksmith shop who is supposed to go around each day and examine the time clocks and see that they are all in order and are punching properly. He gets half day extra per week for this work, and is supposed to do it after hours. How well he attends to his work and how observant the timekeeper must be is shown by the fact that for twelve days one clock punched the same time in and out both morning and evening, which would indicate that the clock was stopped or the punch figures had got stuck; this went on for twelve days before discovered. This would indicate an utter lack of proper supervision over the time clocks and time keeping generally. Each clock has two hundred numbers on them and are located and looked after as shown by list marked Appendix "E." The clocks have too many numbers on them as it takes the men fully five minutes to all punch the clock, and on account of this the whistle blows at 11.45 a.m. so as to allow the men the full hour for dinner. The clocks are fairly well distributed considering the number of men on each clock, but some of the men have to walk quite a

distance to punch the clock, which naturally causes them to knock off work and be near the clock in time to punch it if they are not closely watched, which is the case here. Where the men working outside have to go inside to punch a clock the shop door is locked and is not opened before the whistle blows, but the crowd is all lined up outside waiting to get in to punch five minutes before the whistle blows; to do this they all knock off work about fifteen minutes before quitting time, and it takes them at least that time to get started to work, thus each man in the whole yard loses on an average of an hour each day which you can readily see is a big item of expense. The average pay of the men in the yard is about $1.75 per day, and taking on an average 800 men working each day it means a loss of $140 per day, or a loss of about $41,300 per year to the government. Besides this lost time there is a great deal of time lost by the men loafing around, which we will not attempt to estimate although we consider that the total time lost each year in the yard would not be covered by double the above amount.

The office staff do not punch the time clock, but sign a book once a day when they come in the morning. These books are supposed to be sent to the Director's office each day and signed by him. Some of the men come in late almost every morning, but apparently no attention or action is taken.

The present system of time keeping we consider could be improved on in many ways. When the clocks are locked at 7 a.m. as now, a man coming in a few minutes after 7 will loaf around till 9.30 when he is allowed to punch. While thus loafing around he is talking to the other workmen and keeping them from their work. We consider that the clocks should be locked at 7 a.m. sharp and opened again at 7.15 a.m., allowing all the men who are late to punch, these men losing one hour's time. At 7.15 a.m., after all the men have punched, the clocks should be locked and not opened again till 12 noon when the men punch out. The clocks should be locked at 1 p.m. sharp and not opened again till 6 p.m. when the men punch out at night. Each clock clerk should have a spare card on which he should make a daily punch and send same to timekeeper for his information as to how the clocks are registering. All the men's time should be taken from the time cards and not from slips sent in by clock clerk. This practice of the clerk sending a list of men absent to the time clerk should be discontinued at once, thus making the timekeeper take men's time from cards. The clocks should be inspected periodically by a qualified watchmaker as to correctness of time and regulation. There is another system of time clocks which we consider more satisfactory in every respect and is known as the "Dey" time clock. This clock will give a daily or a weekly record as desired, the daily being preferable as the timekeeper gets records each day of the men's time. This clock has all men's time punching on any one clock punched on one sheet thus doing away with a card to each man which takes considerable more time to check up. Any man coming in after hours is clearly shown by the ink on tape being of a different colour and easily distinguished. The clocks could be of 100 numbers each and distributed over a wider area, some of them could be portable to suit conditions such as working on board the boats, &c. These clocks if desired could be electrically controlled as to time from a master clock in the office building. These clocks are quicker in operation than the present system and would not require the same length of time for the men to punch once they get used to them. At present it takes on an average from four to five minutes to punch the time, while the time required for these other clocks would be about half this. The present system of clocks, although not of the best, could be used to good advantage provided every one connected with them attended to their proper duties.

The foremen in the different departments do not punch the time clock or sign a book, the foremen are supposed to notify the timekeeper if they are absent. The foremen do not lose time when absent, and there is really no check whatsoever on their time. We consider it would be a good plan to have a slip board for Director, offi-

cials, and foremen, placed close to Director's office, this board to be shifted as they come in and go out, and would show at once to Director whether all the foremen were in or not. A slate would form part of the board, and they would write on this slate where they were working so that the Director would see at a glance where every man is. The watchmen do not punch the regular clocks. The night watchman has a key clock which he punches as he goes around the yard once every hour. The day watchmen are supposed to report to the night watchman, no other check being kept on their time; the day watchmen should all punch the time clocks. They have two stablemen who are supposed to come in at 5 a.m. to feed the horses, harness them and have them ready for work at 7 a.m. These men perform the same duties at noon and at night, but there is absolutely no check kept of their time, and judging from the condition of the stables they don't spend any too much time there.

COST KEEPING.

This department is supposed to keep complete records of all new construction and repair work. The cost is divided into two heads called direct and indirect cost. The direct cost is supposed to include all material and men's time who are working on each job. The indirect cost is equivalent to an overhead charge and includes heat, power, light, rent, and the salaries of all men who are not distributed on jobs, such as watchmen, foremen, firemen, office staff, &c. The men's time is distributed by the foreman in each department, and a list sent to the cost department each day of where the men are working. This system is very indefinite. Each man should fill out a time sheet each day showing exactly how many hours he spent on each job. These would be better for the cost clerk, besides the Director could see from these occasionally how long any one man had taken in doing a certain piece of work, and be able to tell whether a man had taken too long on the job, thus checking up excessive costs and tracing them to where they belong. Each new construction is divided into different headings and a construction number is issued for the whole work, and then a job number is issued to each separate heading. These numbers are at present issued by the Assistant Director; this is really a clerk's work. They do not follow out the the same heading on each construction which is somewhat confusing, and even then things are pretty well mixed up. They could easily divide all construction under certain definite headings such as for hull construction you could have plating, caulking, rivetting and drilling; for painting work you could have hull outside, hull inside, cabinet work and joiner work; for carpenter work you could have erecting, decks, launchings, spars and deck house, &c. The outfit should be arranged alphabetically and the cost of each item kept separate, &c. If this was done for all construction work any clerk could issue all order numbers as they would simply run concurrently. This would also give a better idea to the Director of the cost of each operation and costs could be checked up much more readily than at present. All material charged against the construction is taken from the requisitions sent up by the storekeeper, and prices are always charged as shown on these requisitions, no check being made of these prices whatsoever. The indirect charge for light is divided on the basis of the number of lights in each department, for power it is divided on the basis of the motive power in each department, foremen and clerks are charged direct against their departments; for office staff, watchmen, &c., a percentage is struck, and this is added to each department. The ratio of the direct to indirect charges is excessive, but this is doubtless partly due to the high cost of construction. The indirect charges could be cut down considerably under proper management.

ACCOUNTANT'S DEPARTMENT.

This department looks after all vouchers, cheques, petty cash, &c. The accountant has no power regarding the issuing of cheques except for petty cash, all cheques being

issued from Ottawa. The timekeeper makes up the pay roll each fortnight and sends a copy to the accountant, a copy to the paymaster and the original goes to Ottawa. The accountant wires Ottawa the amount of the pay roll as soon as it is made up. Ottawa wires a credit for this amount in favour of the accountant on the bank at Sorel. The accountant in turn makes out a cheque in favour of the paymaster covering this amount and the accountant checks up the paymaster to see that this whole amount has been paid in wages. All invoices are sent to the accountant for his approval regarding prices and extensions being correct, and he forwards them through the Director to Ottawa. Ottawa issues a cheque covering this invoice and notifies the accountant by means of a voucher when the bill was paid and the number of the cheque. The accountant in turn notifies the storekeeper for his records. The accountant carries a petty cash account to the extent of about $1,000, which is deposited in the bank jointly with the Director. This petty cash account is used for the purposes of small purchases which are required at once, a covering order being sent to Ottawa which in turn issues a cheque in favour of Accountant and Director to reimburse them for the amount spent on purchase. The petty cash account is also used for the paying off of any men who leave or are discharged before pay day, the Director and accountant issuing a joint cheque covering the man's pay. This is then included in the pay roll and the paymaster reimburses the petty cash account for this amount on pay day. This department submits a monthly report to Ottawa of all vouchers and petty cash account. There is more or less duplication of work on account of the present system of paying all accounts from Ottawa.

PAYMASTER.

This department pays all the men in the yard and on the fleet during summer and winter. The yard is paid fortnightly and is all paid by cheque. The fleet is paid once a month and paid in cash. The paymaster goes around the yard and pays the men in each department during working hours. The pay roll for the yard is made up by the yard timekeeper and is forwarded to the paymaster who checks it over for extensions being correct. The accountant issues a cheque in favour of the paymaster for the amount of the pay roll, he in turn issuing individual cheques in favour of each man on the pay roll. These cheques have to balance with the amount of pay roll and cheque issued by accountant. In case of over-pay it is carried over to the next pay and deducted from the man's time. In case of under-pay it is sometimes paid out of the petty cash account by the Director and accountant, the paymaster reimbursing them on next pay day, or it is sometimes carried over to next pay as before. This under-pay or over-pay can only occur through a mistake in the pay roll through a man being allowed too much time or not enough time. The paymaster asserts that this occurs very seldom, which we can quite understand from the very loose way of time keeping, as good care is taken to allow a man his full time whenever there is any room for doubt, his time never being checked from the time cards. The men in yard do not sign the pay roll, the paymaster receiving from the bank all the cheques endorsed by the men and uses this as a receipt. In case a man can't write the cheque is signed by a witness with the man's mark. The paymaster goes out once a month on the fleet paying all the men on fleet from Montreal to Crane Island; this practically takes about three days of his time. The pay roll for the fleet is made up by the Marine Department, which has an office at Sorel. The fleet is all paid in cash and each man signs for his money in the presence of the paymaster and the captain of the boat or dredge. In the case where a man cannot write the pay roll is signed by the paymaster and the captain signs as witness. The paymaster's time is all charged against the yard while we consider that a certain fraction of his time should be charged against the fleet. The present method of paying in the yard is bad on account of the time the men lose waiting around for the paymaster and also the disruption it causes to a department

during the time the men are being paid. At present it takes the paymaster one-half day to pay all the men, which practically means that the men will lose on an average of half hour each on pay day. We consider that with two or three men paying as the men leave the yard at noon or night this could be all accomplished in at most fifteen minutes. The men could all be paid from the watchmen's house at the main entrance.

DRAWING OFFICE.

As now constituted, one man who styles himself Chief Draughtsman, has five or six men under him; this man designs new buildings, foundations for machines, &c. Another man is in charge of the hull department with one or two assistants, and another man is in charge of the engineering department, but none of them are properly constituted chiefs, having or taking no responsibility for their respective departments. There are altogether 12 men in the drawing office; they have no proper organized method of working or keeping records of work done.

In our opinion Mr. Bridges is well qualified to take control of the hull department with two or three men to assist him. A new man could be obtained to take charge of the engineering department with two or three assistants, and all the work right through the different shops, and he would also look after any building designs required, thus doing away with the present chief draughtsman and his staff. These two men to keep proper books of particulars showing dimensions of ships, sizes of engines, boilers and auxiliaries, weights of material, displacements, speed, horse-power of machinery, trial trip and stability, and all necessary details. These books to be set going at once and all back data of work collected and entered forthwith.

These two men must be able to take out weights of material, design hulls, engines and boilers, work out horse-power and estimate costs of all kinds of new construction, and be subservient to the Director alone who in turn would deal direct with the naval constructor in Ottawa. Seven good men all told, including blue print man, is an ample staff to handle the amount of work they have been doing in past years.

When called upon by the Director these men would make up detailed estimates of cost of any new construction proposed and make out designs and sketches for submitting to the naval constructor at Ottawa in competition with private yards. In the event of the decision being that the vessel was to be built at Sorel, then these men would see that they got returns of the cost from time to time during the progress of construction, and as the outfit was purchased would be able to keep the Director informed if the actual cost was keeping within the estimated limits; if not to investigate the reason why. The naval constructor would visit the yard at intervals and satisfy himself that things were going right as to management, cost and time taken to build, and be able to give personal advice where he thought necessary.

The drawing office is a miserable place and not fit for men to work in, being badly ventilated and low in the ceiling.

The design of drawing boards is not good, being far too small for ship yard work, and of too costly construction.

A vault ought to be introduced for keeping all valuable drawings, papers, books of particulars, &c., the key of this vault to be kept by the chief draughtsman and opened and locked by him personally morning and night. In the event of a fire occurring in the office at the present time simply means that every scrap of information they have would be lost which would cripple the place for years. This is very serious and ought to be looked into at once.

The space is hampered for stowing plans; we discovered a host of drawings in a wood box stowed away in the power house, the reason given being that they had no other place to stow them for fire protection.

MOULDING LOFT.

There are at present two moulding lofts, one should be discarded and the authority to run the loft taken out of the hands of the foreman carpenter who is not qualified at all for this work. The present loftsman is all right, and must be directly under the charge of the hull draughtsman. Many improvements could be introduced into loft work. The present system of having about 12 men making templates for every frame in the boat is bad, in fact they make far too many templates; the work would be better done and cheaper if in many cases the plater went to the boat and made his own template. The wood used is too good and heavy, and is put together principally with screw nails (tacks are quite sufficient) and each man has a nice stool he carries about with him and sits while working; this is an unnecessary luxury. Instead of working battens on the floor with small 1½-inch nails, they ought to have spikes with round heads; it makes the work far easier on the men, as they don't require to be on their knees all the time, and the work would be done much quicker. A great amount of time and money saving inventions could be introduced into this department. The drawing office and mould loft are the backbone of a ship yard and these places want to be thoroughly re-organized and put on good sound working lines. They should be placed as close together as possible, as the mould loft man must consult very frequently with the chief draughtsman as to spacing of rivets, methods of doing work, explaining drawings, &c. At present spacing of rivets in new construction is altogether wrong, in many cases twice as many rivets being put in as are necessary, in other cases too few rivets are used consistent with strength. Lloyds, British Corporation and Great Lakes Rules for shipbuilding, a copy of each together with their rivetting tables ought to be kept in the drawing office and mould loft, and the tables displayed in conspicuous places and available to every one. A good Chief Draughtsman and a good Loftsman are a "sine qua non" to a well-organized ship yard.

This will materially help the progress of the yard as a shipbuilding centre and make them capable of competing with private yards, as there is no reason why vessels should not be built as cheaply at Sorel as anywhere.

MACHINE SHOP.

The machine shop is at present under Mr. U. J. Bilodeau, who is classed as foreman. He has been in charge of the shop since August, 1910. The machine work is very good and the management is as good as could be expected under present conditions. This is undoubtedly the best managed department of the whole yard. The equipment of shop is very good though somewhat crowded. The machines are all in very good shape with the exception of one or two old machines which should be discarded and new ones purchased. The machines are nearly all running too slow and should be speeded up and high speed steel used for all tools; there is very little of this in use in yard at present time. The staff of the machine shop at present consists of one foreman at $166.66 per month, 45 machinists at $1.70 to $3 per day of ten hours, 31 machinists' helpers at $1.35 to $2; 15 apprentices at 50 cents to $1.05, and ten labourers at $1.35 to $1.70, making a total of 107 men in the machine shop. The machinists and machinists' helpers do all the important machine work, the apprentices are supposed to be learning their trade and act as assistants to machinists; the labourers are used for all heavy lifting work, moving castings, &c. We consider that these labourers should be done away with altogether, and when any labourers are required for heavy work the foreman could obtain them from the yard foreman. The machine shop is reduced to about 95 men during the summer months, men being taken on from the fleet for winter repair work. The machine shop is well up with its work, having all the repairs to fleet practically completed, and the new construction work well under

way. All parts made for new construction when completed are stored in a shed provided for this purpose; the shed should be equipped with a small derrick for lifting heavy pieces of machinery to and from the industrial railway thus saving a great deal of time in handling. The machine shop is somewhat cramped, there being very little space in the shop itself for storing even small pieces while waiting to be assembled. The fact of machinery having to be taken from shop and stored in a shed makes the cost of these machines higher on account of the double handling. The work could be better timed so that when a piece of machinery is completed it should be put right on the vessel. The shed where the machinery is stored instead of being some place near construction work is located further away from this work than the machine shop itself. All work is done on job numbers. On the completion of any work the foreman informally notifies the Assistant Director who gives orders to have the machine stored in shed or placed on boat as circumstances demand. On repair work, the foreman when repairing any part of an engine, steering gear, &c., completes the work and notifies the Assistant Director as before. All repair work to each boat is done on one job number, so that there is no means of checking up what the repairs to any particular part of machinery or hull costs; this should be subdivided.

The machine shop is practically divided into two parts, one part where all heavy work is machined and a second part where small parts are machined and most of the repair work is done. All engines, winches, &c., are assembled in this second part and go from here to the shed or the vessel.

The two parts of the machine shop are almost as badly separated as if they were in two separate buildings as is shown on the plan marked Appendix "F."*—Large castings are machined in shop marked "A" on above mentioned plan; to get these large castings into the assembling shop it is necessary to take the casting out the large door at end of shop "A" and go around through the yard to the farther end of shop marked "B." This work is all done by labourers attached to the shop.

The machines are driven by one motor belted to line shafting running the full length of each shop. The more modern practice is to run all large machines by individual motors, group all small machines together, and run such group with an individual motor. The heavy castings in central body of shop marked "A," where all the heavy tools are, are handled by a small travelling crane having 5-ton chain blocks attached to same. This crane is operated by hand for all lifting and transverse motion. The longitudinal movement of the crane is accomplished by a belt from the line shafting operating a small drum, a wire rope being attached to the crane and passing over a pulley fastened at each end of machine shop. The operation is slow and when any heavy castings are being moved along the speed of the line shafting is slackened, thus slowing down all the machines on this shafting. This arrangement is obsolete and could easily be improved upon. The appearance of the shop, though somewhat better than the others, is far from clean and tidy. The shop has on its list a sweeper, but it is quite evident from the appearance of the shop he does not attend to his work. Each shop both "A" and "B" has a separate tool room; these rooms should be combined and put in charge of one man. No proper record is kept of tools, no record being taken when a tool is given out or returned to tool room. A record should be kept so that the foreman should be able to tell at a glance where every tool in the shop is. The tool room in shop marked "B" was wide open when we visited the shop on Sunday, and there was not a watchman in sight. In the tool room in shop "B" a man is kept to look after the tools, sharpen them and keep them in repair. All the tools should be put under this man's care in one room, and he should be responsible for them in every way. All machines in the bays of shop "A" and out of the reach of the travelling crane have large chains suspended from the beams above for the purpose of using chain blocks on heavy work; these chain blocks have to

* Not printed.

shifted from one place to the other as occasion requires. We consider it would be advisable to install about two small wall cranes for handling this heavy work. The list of machines and condition of same are shown in pages 83 to 88. A large new chuck lathe was recently bought and was installed on a wooden foundation; this lathe when run at a high speed vibrates too much to do good work; this machine should be installed on a solid concrete foundation. They have a number of tail shafts for tugs, &c., which are about 25 feet long, while the longest lathe will only handle 20 feet. We consider it would be advisable to exchange this lathe for one capable of taking the longest shaft they require. The employee running the milling machine had made up a number of small milling machine tools, but they are of very little use on account of not having been hardened properly. We consider that this is a waste of time to make these tools as they could be bought much cheaper from the manufacturers. The foreman of the machine shop looks after the three boilers located in the building between the two shops. They have two men firing on these boilers, while we consider one should be sufficient. There are no records kept as to when machines were bought, price paid for machines, or the size of machines; these should be all kept on a proper card index system.

If the yard is to be run as a repair yard only the machine shop is well enough equipped, and we would not recommend any changes in the shop. If the yard is to be run as a construction yard as well as a repair yard we would recommend that the travelling crane be electrified and the crane extended so as to embrace both shops. This would necessitate the cutting of an archway in building between two shops, the removal of one floor in this building and the removal of the pattern shop floor over the assembling shop or shop "B." The engines and generators in the building between the two shops could be removed to the present power house for breakdown service, the old Corliss engine could be disposed of and the boilers could be all put into one firehold instead of two as at present. The pattern shop would have to be removed, but space could be easily found for this, such as the old mould loft. The space between the two buildings could be used to good advantage as a tool room and an office for the foreman where he could see the whole shop at once. About two small wall or post cranes should be installed over the large machines in bay of shop "A." There is an assistant foreman in this shop who also looks after the men's time; he would not need to look after the men's time if each man made out a time sheet each day.

PAINT SHOP.

This is a comparatively new building, the lower flat being used as the paint shop and the upper flat as moulding loft. The paint shop is well run under the present foreman, who seems to know his duties. We think at the same time that the number of painters employed, viz., 57, is excessive. This man complains very much about the poor quality of paint supplied to him. To overcome this we would suggest that a yearly contract be made for all kinds of paint, varnish, putty, oil, &c., that samples be called for along with the prices, the prices be kept at Ottawa and the samples classified and sent to Sorel, and the foreman without knowing the prices to make tests of each on pieces of wood; this would take a little time, because each coat must be put on and allowed to dry properly, rubbed down and the next applied; after the samples have all been tested the foreman to make up his mind which is best and notify the Director accordingly; then the contract is fixed for a year and no more trouble. Next year if prices suit testing does not require to take place.

We also notice that the men take about ten minutes before knocking off time, proceeding to the shop with their pots and brushes to have them replenished against starting. This is all a dead loss of time. A quantity of paint and accessories should be kept on the job, and the men get what they want right on the spot. A clerk is essential for this department provided he does all the weighing out of materials to the men and

keeps a proper record which the foreman should sign and return to the office. Time keeping of the men on different jobs should be kept on daily time sheets initialled by the foreman and returned to the office.

BLACKSMITH SHOP.

The blacksmith shop is a wood building one story high, about 80 ft. x 60 ft., and contains 10 forges, 2 steam hammers and 2 electric hammers, a vice or two and a weighing machine, 4 hand cranes from 1 to 3 ton, motors, blower, foreman's office, template shed, tool house, coal shed and horse shoers' shop, all as shown on plan. This shop is in charge of S. Chauteauvert, who is classified as foreman. This department is certainly the dirtiest, worst kept place of the kind it has ever been our lot to see. The place is black as night, dirty and swarming with men. Generally speaking about half the number of men employed are seated or reclining on comfortable seats and benches with backs to them, quite openly. The men are quite apathetic and take little or no notice of any one coming in. The foreman is there, and he is more to blame than any one else. In our opinion he has been too long there, and far too familiar with the men to have any control over them.

The hammers are too light, the heaviest being about 1,100 lbs., and they are not kept in good order, steam and oil escaping in all directions. The shop wants to be scrapped and a new one built (it is very old and charred and burnt) with proper light and ventilation instituted.

They do a great variety of work all of a light nature such as forgings for main engines, winches and dredging plant.

The staff of this department comprises 1 foreman, 1 boilermaker, 20 helpers, 1 labourer, 11 blacksmiths, 1 clerk—a total of 35 men. We would suggest to cut this down to 8 smiths with a helper each, 1 handy labourer to keep the tools in check and clean up the shop, and a boy for each of the hammers; dispense with the clerk, and make the foreman keep a record of forgings made with their weight, and make the men fill up time sheets stating the hours worked on each job, these records to be certified by the foreman and returned to the office daily.

SHIPYARD.

This department is supervised by a foreman named A. Gendron who has 8 assistants under him, 1 clerk, 3 messengers and 147 labourers—160 all told.

The foreman, in our opinion, is well qualified for his duties, and the way he works his men is he splits them up into gangs of from 9 to 14 with a man in charge of each lot. He moves all heavy weights, puts engines and boilers, masts, machinery, &c., on board the various boats, but what he wants 147 labourers, 8 assistants, 3 messengers and a clerk for, we cannot understand. We would recommend cutting down the assistants and men about half, cut out the messengers and clerk altogether; make the foreman do more work himself, the men to fill in day time slips which he would sign and return to the office. This department is like all others, over-stocked with men This foreman is also responsible for the number of horses (11) in the yard, it being generally his work they are employed on. We really think the number of horses could be curtailed without interfering with the carrying out of his work.

SAWMILL.

This is practically a new department having until recently been under the direction of the foreman carpenter. The sawmill is under E. Lachapelle, who is classed as foreman. The sawmill is located in a building with the joiner shop, the joiner shop occupying the upper floor. The sawmill is very well equipped, the machinery

being up to date and all in good shape. The logs all come in by water and are carried into the mill on a regular hauling-out way with endless chain. All the lumber used in the yard except for moulding loft is cut up in the mill from either square or round logs, the slabs being burned in the boilers. The shavings from all the machines are at present gathered up by the labourers and put into an exhaust fan and discharged through a wooden box into firehold No. 2. They have a system of shaving exhaust pipes over each machine, but this is discarded as the fan did not carry the shavings away properly. This is largely due to the piping not being designed properly and the fan being a little too small. This could easily be remedied and do away with the necessity of gathering up the shavings as at present. All the slabs from the mill are thrown outside in a pile, gathered up, placed on an industrial railway car and run by hand down to the firehold and there unloaded and burnt. These slabs could very easily be carried to the mill with practically no handling by a belt conveyor at small expense. The logs are sawn up by a band saw in summer time and by a circular saw in winter time, on account of the logs being frozen.

The sawmill when not working on any particular construction work cuts up lumber for stock. The stock of lumber is extensive, having lumber one, two and three years old. The mill is all run from two large motors belted to line shafting in the basement. We consider that it would be better to have individual drives as the machines are all slowed down when a large log is being cut.

The industrial railway running from the sawmill to firehold No. 2 is the only part of the yard system that is kept cleared during the winter months, and this is only used for carrying slabs to the firehold.

On one occasion we visited the mill and found only one man working on some bench work. This man when he thought we were not looking tapped on the office window, which has frosted glass and should be changed to clear glass windows, and immediately the men came trooping out like rabbits, the office was full of them including the foreman; of course they all were busy in a few moments.

The staff in the sawmill consists of 1 foreman, 1 clerk, two carpenters, 15 helpers and 7 labourers—being 26 all told. The mill could be just as well run with half this number and does not require a clerk.

JOINER SHOP.

The cabinet shop is located above the sawmill and is under the foreman carpenter. The equipment is very good, and all the machines are in very good shape. The shop is run by a belt from the sawmill. The joiner shop makes all cabin work, sashes, doors, &c., for the construction work. When the men are not working on construction work they make chairs, tables, &c., for outfit of vessels. There is a file shop in connection with this department located at the end of this shop. This file shop does all the brazing of saws, sharpening of knives, saws, &c., for sawmill and joiner shop, and is in charge of one man whom we have never seen doing anything while we were around; this man should be given some other duties and could act as clerk for joiner shop. This staff is included under the carpenters. In the event of the yard going into construction work, to fulfil the requirements of vessels such as the government are asking tenders on at present time, this shop would have to be enlarged and some new machinery installed to do the necessary joiner work, and run as a separate department with a foreman in charge.

PATTERN SHOP.

The pattern shop is located above the assembling part of the machine shop. The shop is in charge of O. Gauthier, who is classed as a foreman. All patterns required for new construction are made here and are made from drawings. All patterns for repair work are made from the broken parts or from drawings. The equipment is very

good and all in good shape. One wood turning lathe is placed very close to a post so that it is impossible to get large work on the lathe. The shavings and sawdust are all gathered up by an old man who is employed for this work; the shavings are dumped over the stairway and are then carted to the firehold. These shavings could very easily be handled by a small exhaust fan discharging into a storage bin and dumping into wagons from a chute and carted to firehold. The work turned out is very good, but like all the other shops is costing too much. The foreman seems to spend a great deal of his time going around the yard looking after his men who are out on the fleet making patterns for repair work. The pattern makers should not have to do this at all, as a draughtsman from the drawing office should be sent out and make sketches of any repair work which require new patterns.

The stock of patterns is very large and distributed over two different buildings. Three floors of the old power house, that is the building between the two machine shops, is used for patterns and also a separate building, No. 19 on plan, has four floors covered with patterns. The patterns are laying all over the floors, hanging up on nails, hanging on posts, and a very few on wooden shelves. The patterns are numbered at present according to construction and drawing numbers. There is absolutely no record kept as to when pattern was made or where it is to be found. They have one man who looks after all these patterns, and is well informed himself as to where a certain pattern is to be found, but we do not see how anybody else would ever be able to find any pattern required. He gives all patterns out and returns them to stock, keeping a sort of record as to when a pattern is sent out, to whom, and when returned, with the weight of the casting. The patterns should all be put on shelves, properly numbered, sorted out and indexed so that they could be located by anybody. The patterns too large for shelves could be arranged much better than at present. Some of the patterns are located directly over the boiler room, and it makes a rather warm place for patterns. The water pipes in this room were sweating and the water was dripping on the patterns, and will doubtless damage them, but nobody seemed to notice this. The staff consists of 1 foreman, 1 helper, 1 apprentice and 8 pattern makers, making a total of 11 men. This staff could be reduced to about 5 pattern makers and do the work satisfactorily.

ASBESTOS.

This is a small department composed of 1 foreman and 5 men, although at times there are as high as 22 men employed on the work, the majority of whom are labourers. The department is in charge of H. Legault, who is classed as a foreman. The department is located in one end of the paint shop building, occupying two small rooms about 20 ft. x 20 ft. each. One room is used as a storeroom for cement, fire clay, asbestos plaster, asbestos board, lime and pipe covering stock. This stock is all entered on the stock room books, and the foreman is supposed to make out a requisition for all material used. All this stock should be put into the general store, and be directly under the supervision of the storekeeper. This department does all the pipe covering, boiler covering and insulating work required for new construction and repair work. They also do all brick work such as making fire arches in boilers, &c.; they do all the concrete work required in the yard, and all the cementing in ships bottom. They have two mixing boxes, and one steam drying oven for drying out the pipe covering they make. All pipe covering required in the yard is made in this department, the department having pipe covering moulds for all sizes from ¾ to 5 inches; the work is all done by hand. When the men are not engaged on construction or repair work they make up pipe covering for stock. They utilize all the old material taken from boilers, steam pipes, &c., working this up again and mixing new material with the old, the working up of old material requires a great deal of time to do it properly. The material looked to be very poorly worked, large lumps of old

material being plainly visible in the mixing box. The covering itself is very poorly finished and does not in any way compare with that manufactured by any reliable concern. They have a large stock of all sizes on hand averaging from about 400 to 1,000 feet of the different sizes, and they are continually adding to this stock. This pipe covering if properly made does not require skilled labour to apply, the only part where skilled labour is required is for the covering of tees, elbows, special fittings, &c. The cost of this material is on an average 50 per cent higher than it could be bought from private concerns. All the pipe covering is made in moulds, put in the oven to dry, then clamped up in a wooden box and slit by an ordinary hand saw. The steam is apparently kept on the oven all the time, for any time we visited the department the steam was on full blast and nothing in the oven or nothing being made. We have visited the department when only one man was working there, the rest working on the fleet looking after the work there.

In our opinion this is an unnecessary department, as a very much better quality of pipe covering can be purchased as required from private concerns. The work could be put in charge of the steamfitter or could be done by contract. Should the department be put under the steamfitter it would only require about two skilled workmen to do the special work, the rest being done by labourers under the direction of the steamfitters, and the concrete and cementing work could be attended to by the yard labourers. In fact cementing of the bottoms inside could be dispensed with entirely in boats working in fresh water, and where cement is required half the quantity used would meet the case.

STEAMFITTER AND PLUMBER SHOP.

This shop is located at one end of the old boiler shop and occupies two floors. The shop is in charge of J. Langlois, who is classed as a foreman. The department does all piping, including bilge and ballast piping, plumbing and tinsmith work for the yard and the fleet. The shop is very well equipped and the machines are all in fairly good condition. The tinsmiths when not busy on construction work spend their time in making up for stock, galvanized iron pails, tea kettles, drinking cups, &c. We consider this an expensive way of obtaining these articles, as they could all be bought much cheaper outside. A list of these articles with yard prices and manufacturers' prices is shown on pages 132 and 133. The quality of the goods made in the yard is not by any means up to standard, being all hand made and are made in two or three dozen lots. Modern plants have up to date machinery for all this class of work and can make it very cheaply. There is a clerk who apparently has very little to do; he looks after the tool room, where they have a supply of pipe wrenches, pipe cutters, &c., but no records are kept of them. He also keeps track of the men's time on the different work, which is sent to the cost department each day. The place is exceedingly dirty and untidy, pipe and fittings lying all around the place and no record kept of them. The machines are all covered with oil and dirt and look as though they were never cleaned. It seems to us that the clerk could very well spend some of his spare time in keeping the machines clean and the place tidy. The upper part of the shop is almost entirely devoted to tinsmith work. There were, as usual, a number of men sitting around doing nothing when we visited the place. There were two men working, one making up a galvanized iron pipe and hood for the kitchen of one of the tugs, the other man was making a tool chest for the use of the steamfitters work on the fleet; these should all be made in the joiner shop where they have the proper equipment. This man, who is a carpenter, is attached to the steamfitters' staff for purposes of boring holes and shoring up pipes wherever needed. This is, in our opinion, entirely unnecessary as there are plenty of other carpenters around the place. There are a lot of old and out of date fire extinguishers hanging around the place. These should be re-charged and put into service or

scrapped. The equipment for the tinsmiths is very good for the work they have to do, and is all that is required. They have an old coke soldering iron furnace which is placed on the end of a wooden bench with a piece of iron under the stove. The furnace is all cracked and broken and looks as though it might fall to pieces at any minute. We consider this very dangerous on account of fire. The staff consists of 1 foreman, 1 clerk, 2 apprentices, 1 carpenter, 22 steamfitters and 1 plumber—all told 28. We consider that 15 steamfitters could handle the work just as well as at present.

AIR SYSTEM.

The compressed air is supplied by three different compressors, one located in power house, one located in machine shop and one located in boiler shop. The different compressors all pumping into a common main. The compressor in power house is a 12 x 19 x 18 Canadian Rand drill compressor running at 100 R.P.M. and delivers about 6 cubic feet of air per revolution at 100 lbs. pressure. The compressor in the machine shop is a 12 x 12 x 14 steam driven air compressor manufactured by the Fog Signal Co., of Toronto. This compressor was only running at 56 R.P.M. when we drew their attention to it and it is now running at 120 R.P.M. This compressor should deliver 2 cubic feet of air per revolution. The compressor in the boiler shop is the same as the above, that is a 12 x 12 x 14, but is electrically driven and is running at 136 R.P.M. The total amount of air delivered per minute should be approximately 1,100 cubic feet at 100 lbs. pressure. The pressure in the power house is very seldom above 80 lbs. and we have seen it as low as 48 lbs. This is not conducive to good work. The pressure should at all times be at least 100 lbs. in the power house. All large rivets have to be driven at night so that there will be sufficient pressure. The air compressors are not large enough for the number of pneumatic tools which are in use in the yard. The two small compressors should be disposed of and another up to date electrically driven air compressor should be installed. The air is piped to all construction work and has outlets well distributed over all new work. The air piping should all be gone over and tested for leaks. The number of pneumatic tools in use in yard is shown on page 84.

STEAM DISTRIBUTING SYSTEM.

The steam is supplied from two different sources in the yard. There is a battery of three return tubular boilers, having a working pressure of 120 lbs. with a steaming capacity of about 10,000 lbs. of steam per hour. There is a battery of two locomotive boilers located in firehold No. 2, having a steaming capacity of about 11,000 lbs. of steam per hour. The steam is used for dry kiln, heating, steam hammers in blacksmith shop, air compressor, &c. The principal item is heating, there being about 4,000 square feet of heating surface in the yard. The steam pipes consist of wrought iron pipes and are laid in the ground without any insulation. All condensation is trapped to sewer and is a total waste. We consider that the piping should all be properly insulated and all the water of condensation should be returned to the boilers. Should this be done we venture to say that heating expenses would be reduced at least 50 per cent. The total amount of coal used in the yard boilers for one year is, as far as could be ascertained, as there is no reliable check on this, about 1,200 tons. The cost of coal is $4.10 per ton, delivered on the yard wharf.

WATER AND FIRE PROTECTION SYSTEMS.

All the water used in the yard is taken from the Richelieu river at the upper end of the yard, above the sewerage disposal of the yard and Sorel. The water is pumped

from river and distributed around the yard by two centrifugal double stage electrically driven pumps. Only one pump is used at a time, and is all that is necessary for the daily needs of the yard; each pump has a capacity of 500 G.P.M. The water is used for boilers, toilets and wash basins in office; the shops have no accommodation for men to wash up.

The fire protection is fairly good, having besides the above mentioned pumps one steam driven Fire Underwriters' Pump of 500 G.P.M. capacity, located in the building between the two machine shops. The majority of the buildings are equipped with stand pipes and 50 feet of hose on brackets. They have thirteen 4-in. fire hydrants distributed throughout the yard. The yard has two hand fire reels, each having 200 feet of rubber lined hose. There is no regular fire brigade organization, the head steamfitter and his men are supposed to look after all fires. A regular fire brigade with occasional fire drills should be organized; the alarm in case of fire, consisting of the blowing of the yard whistle. We consider that the yard has been very fortunate in the small number of fires which have taken place on account of the amount of smoking going on in the yard. The village of Sorel has one fire engine and two fire reels which can be called on in case of fire. A number of up to date fire extinguishers should be installed in easy accessible places in all buildings. The system should be periodically inspected by a competent man.

OLD BOILER SHOP, No. 1.

1 shears 51-in. gap, 30 strokes per minute—good machine.

1 vertical punch, 48-in. gaps, 31 strokes per minute—good machine.

1 vertical punch and shear, 27-in. gap, 16 strokes per minute—poor machine.

1 wall counter-sinking machine—good machine.

1 set rolls outside the shop 10 ft. 0 in. x 10 in. old, hand-screwed gear, not good, too old and slow.

2 time-keeping clocks in this shop. The doors of this shop are locked 10 minutes before the whistle blows for stopping and every available approach is packed with men waiting to make a rush when the doors are opened to get in to punch their card. The men are all knocked off in the mould loft above and standing on the stairs. It does not seem to us that the men work any at all after it comes within 15 minutes of knocking off time, and how they make a start after the whistle blows for commencing work, we do not know, as we were afraid to poke in too much for fear of upsetting the men and causing friction.

The shop is kept in a very dirty, untidy state, very much in need of whitewash. On a visit March 21, 11.30 a.m., counted 20 men sitting and lounging around. This is one of the worst places in the yard for loafing.

The handling of plates at the punches and mode of procedure in this shop is the same as No. 2—two to three times as many men as are necessary.

In making these statements due allowance is made for routine. We know that every man cannot be always with his back bent, and there are times that the men have to hang on, but we know all about that sort of thing and are making due allowances.

Punches here are all centred same as other shop which is not required for ordinary work.

These boiler shops will never be any better until piece work is introduced. It is an utter impossibility to run a shipyard any other way than by piece and keeping a daily tally of the amount of work the men do.

Furnaces.

Plate furnace 20 ft. 0 in., mouth 5 ft. 6 in. x 2 ft. 2 in, 1 fire.

Angle furnace 40 ft. 0 in., mouth 2 ft. 6 in., x 1 ft. 3 in., 2 fires.

Both are good furnaces and heated by coal fires.

Bending blocks 50 ft. 0 in. x 30 ft. 0 in., in good order.

Jobbing blocks 10 ft. 0 in. x 7 ft. 0 in., in good order.

1 hand jib crane for handling plates at jobbing blocks—not much account—obsolete.

1 cold saw—too much of a toy—too small and neat for rough shipyard work, especially to be sitting outside.

There are no means of handling plates hot or cold, seems to be all hand labour, which is a serious matter in furnace work.

They might at least have a winch at the opposite end of the blocks to pull out and in plates and angles from the furnaces.

This place is kept in a very dirty state.

Have counted repeatedly from 6 to 12 men seated and standing around a fire at the back of the furnaces, which is placed there for the purpose of keeping the loafers warm; seats are everywhere in evidence.

Away at the back of the furnaces it is very dark and dirty. Over the furnaces is a space for stowing old templates. These are nicely fixed up in various ways to screen men loafing. This place is also very dark and in want of whitewashing.

An electric light is kept burning all day Sunday at the back of the boilers.

We are told angle iron smiths cannot be got in Sorel; that is a very great pity and the statement is very open to doubt. These men can be got well enough if they are asked for.

All flanging of plates is done at these furnaces—no appliances. (See note on rolls in No. 2 boiler shop). This note would apply to the 10 ft. rolls nicely.

Air Tool Repairing Shop.

This is entered from No. 2 boiler shop and the entrance is kept locked and the place seems to be well managed.

3 vice boards.

1 double emery wheel.

1 small lathe.

1 shaper.

1 screwing machine.

We have generally noticed 4 or 5 men and 1 boy in this shop and have never seen any loafing going on, probably because it is all screened in with open wire and the men can see any one coming.

NEW BOILER SHOP, No. 2.

This is a comparatively new erection and very good. The roof is composed of iron trestle work carried on upright iron beam, forming girders for carrying the three travelling cranes. This is a first-class shop in every way, plenty of headroom, light and ventilation, but like all the other buildings in the yard, is kept in a very dirty and untidy state. Men have to pick their way over heaps of iron cuttings, angles, &c., and run very grave risks of breaking their legs; in such a case we presume the Government would be responsible.

Planing machine, open ended, with travelling cutter and 4 screw jacks for keeping job in place—good machine and in good order—motor driven.

Rolls—12 ft. long, top roll 22 in. dia.—very good and in good working condition. We consider it a huge mistake to buy a set of rolls of this value less than 28 to 30 feet long. The top roll ought to have a slot cut in it for flanging plates. This would save a mint of money as plates could be flanged in thousands of cases instead of fitting angles on the edges and would save tons of material in the construction—meantime if they want to flange a plate it has to be done in the furnace and flanged by hand.

The rolls are very badly placed for general work; they are only useful for boiler-making, and are motor driven.

Rolls alongside the large ones 2 ft. 10 in. long worked with a ratchet—these are only toys and of very little use.

Motor and air pump placed near the rolls—a very good pump and seems to work well, but very much too small.

Overhead crane over the boiler under construction, lifts 30 tons with hand power for lifting and travelling. This is a good tool, but not nearly heavy enough for handling boilers; ought to be an electric crane capable of lifting a boiler shell for rivetting purposes; as it is the boilers have to be rolled about for rivetting, and when the time comes to remove the boiler to the ship half the shop is stopped; it takes three to four days to remove a boiler and place it alongside the ship.

The boiler makers appliances are very poor. All flanging done is by hand. The boiler heads are bought flanged ready for fitting which is good and saves a lot of money and time.

The rivetting appliance is not anything like adequate. The rivets are put in under air pressure and has to be done at night because the pressure is not sufficient when other tools are working. The pressure during the day varies from 45 to 70; at night time, when all other air tools are stopped, 100 is available. Night work like this increases the cost about 100 per cent. Hydraulic rivetting should be introduced; it makes by far the best boiler rivetting. This would mean a new set of pumps and an accumulator.

A small air lift is attached to the 20-ton crane; lifts about 3 tons which is very useful.

Hydraulic coping machine—is a very poor tool, slow in action, and will not cope a channel smaller than about 8 inches; even then it does not cut clean into the root of the bar, and is therefore of very little use. Hydraulic cutting machine for channels, H. beams, &c., is good, but very slow for heavy work. To cut a channel bar 12 x 4 x 4 x $\frac{5}{8}$ takes $1\frac{1}{4}$ minutes to go through; it however makes a good clean burst cut, and would be very useful if placed in a better position.

The hydraulic pumps have no accumulator and are only used for the two above machines and are said to be 1,800 lbs. pressure. Three vertical punching machines each with 48-in. gaps (all good)—one runs at the rate of 24 holes per minute, another 34, and another 36, but the men in punching set off and on at every hole and only punch holes at the rate of about 16 to 18 holes per minute. All the class of work done which came under our notice should have been punched at full running with no setting off and on; and the number of men handling the plates is very excessive, 10 and 11 men being at the work when 4 is quite sufficient.

One shearing machine with 48-inch gap and 29 strokes per minute. This is also a good machine and the note as to number of men applies here also.

One horizontal punch which is broken down and has been standing idle for three months waiting on repair parts coming for it.

One double angle cutter—a very good machine only the cutters are too high above the ground and the men have no means of handling the bars properly. Under observation it cut angle bars 5 x 5 x $\frac{3}{4}$, and made a very good clean square cut.

One smaller vertical punch—runs at the rate of 20 holes per minute—this is an old machine patched and not of much account except for light work.

Three radial drills—all very good and in good order—one vertical drill for jobbing—this machine is old but all right.

Two overhead travelling cranes, each capable of lifting 5 tons, both having hand power for lifting and travelling—these are good tools and very useful—they are worked by a man instead of a boy. (Boys are very scarce all over the yard). Men are employed to do boys' work in innumerable instances.

Two wall countersinking machines—both good and in good order.

Narrow gauge railways run half way through the shop, but were never used during our visit to the yard.

The whole shop is very untidy and badly kept and considering the excessive number of men lounging and sitting about, this is unpardonable.

The system of marking off plates for cutting up is most elaborate. The plates are all lined off from templates the shape of the part to be cut off. Round holes and even the marking of the plates in figures are all close centre punch marked which takes a long time to do and is useless and the gang of 8 and 10 men stand around waiting till it is done, to the entire satisfaction of the operator. One plate under observation, about 14 ft. long x 36 in. x 9/16 was all marked as above; then the men gather around the plate and move it by slow degrees on to the roller bogies for taking the weight of the plate. While punching there were 9 men round this plate; 4 were quite sufficient; then the punching goes on, setting off and on at every hole. The proper way would be to punch the plate at full running power with no setting off and on. All the punches are centred, which is useless except for very exact work on boilers. This centre dabbing all takes time and is never resorted to in modern ship building practice. All this waste is due to want of knowledge and proper supervision.

Seating accommodation for the men and fires to keep them warm are plainly visible and padded stools for the punchers; things unheard of in well regulated boiler shops.

There seems to be an unusually large number of old frail men—looks as if they were pensioners.

Various new modernized tools could be introduced into these shops which would reduce cost of work, such as manhole punching and frame joggling machine, hydraulic ram for frame setting, sidelight cutting machines, small hydraulic bears for odd work, and many small ideas introduced if only the man was there to introduce them, all going towards reducing the cost of production.

ELECTRICAL DEPARTMENT.

The electrical department is spread out over four different floors at different levels. On same level or floor of machine shop there is a small room about 15 feet square with an entrance into machine shop. They do all the motor repair work and use this door for taking motors in and out. No attempt is made to keep things neat and tidy and so one could lay hands on anything desired. Half way between the machine shop level and the pattern shop, which is above machine shop, is another small room which is used by a man styling himself assistant foreman. He has a small office here and keeps a few small stores, looks after the men's time, goes out around the fleet to see how work on fleet is going and personally looks after the repairing of the voltmeters and ammeters belonging to fleet, and in fact seems to run the department in general. He also allots the men to the different jobs so we cannot see that there is very much left for Mr. Cote to do although he is the head electrician. He seems to occupy the position of a consulting engineer, but in our opinion could be more useful elsewhere. On the same level as the pattern shop is a general repair shop where they do nearly all the small repairs to arc lamps, clusters, headlights, &c. They have an average of 75 to 80 arc lamps belonging to the fleet to overhaul during the winter months. They also have what is termed a telephone exchange on this floor for the inter-communicating system which is in use throughout the yard. This exchange is necessary on account of having twenty phones in use in yard and the plug boxes in the different departments are only capable of reaching sometimes 10 and sometimes 15 phones, so that to get other departments they have to ring up this exchange and ask for connection to party desired. It would be advisable to do away with this system and install more lines and make all the plug boxes capable of hand-

ling twenty phones. They have another small store and tool room here which are looked after by the man who attends to the telephone exchange; he does other odd jobs besides and is really necessary under present conditions; but we consider that these two store rooms should be combined and he could look after the men's time as there are only about 15 men in the department. The telephone exchange, if present system is kept, should be moved into this store room. The assistant foreman should not have any of this work to do and his office halfway between floors should be abolished as he can't see what men in shop are doing from his office. On a level above this is another floor used as a sort of storage room for arc lamps, searchlights, &c. There is also a room designated as a test room all partitioned off from the other room, but the testing equipment is very meagre. The only standard instrument they have is a Wheatstone bridge of 50,000 ohms capacity. It seems to us that this room is entirely uncalled for. Mr. Cote has a nice comfortable place here besides having an office in the general offices. He indulges in the pleasure of smoking here which is not a very good example to the men. The place throughout has no attempt at tidiness, and wire and things are lying around all over the place. They keep very little stock, getting it all from general stores when required. The work done by the department consists of installing arc lights, motors, wiring, dynamos, &c., in the yard, on new construction and on the fleet, keeping all electrical apparatus, wires, lights, &c., in repair in yard, and doing all electrical repair work on fleet in winter time. The yard has 16 D.C. motors 110 volts, 5 A.C. motors 440 volts, and 5 A.C. motors 220 volts. This gives them three separate motor circuits which, in our opinion, is a mistake. A.C. motors should be used wherever voliable speed is not desired and they should all be of same voltage. They have one man who spends all his time looking after the motors, which we consider is not necessary in such a small installation of large motors. They keep two men on the fleet during the winter time who are supposed to do all temporary wiring for repairs and new construction work; we doubt whether one man could put in all his time on this work. There are only about 150 temporary incandescent lights on the fleet at present. The men have little electric stoves and heaters made up for their own convenience, such as making tea, &c. Mr. Cote stated that he could run the place just as well with 5 good men, and we agree with him, but would not state that any of the men he had at present were no good. The electric current is paid for on peak load and at present at peak of 550 H.P. per month at the rate of $36.50 per H.P. year. The highest peak load they ever had was 625 H.P. but only for 2½ hours when they were sawing some frozen logs in the mill. The power is supplied by the Sorel Electric Co. who have a recording watt meter in the yard power house. They are supposed to take the records away each day. The meter is not accessible to the yard but they can check same from instruments on switchboard. The meter has not been running since we came to yard. The electric company had it away repairing same and have never started it up again and nobody seems to care, in fact the chief electrician didn't know it was not in use until we asked him why. They have a number of A.C. motors, but have no A.C. portable instruments.

They make small switchboards required for the fleet and claim that they make them cheaper than they can buy them. The men work on repair work in winter time and new construction in summer. Any machine work they require they have to go to machine shop for. We think it would be a good thing for the electrical department to have a small lathe of its own for turning commutators on, &c. At present they have a number of small electric drills fastened to the bench and use these for small work. Mr. Cote claims, as he can't specify the kind of goods, he sometimes gets goods that are not suitable for work. The electric wires are all run overhead on poles and on the ceilings of the different buildings, fastened with porcelain cleats, no conduit being used. We consider it would be better to run all these wires in iron conduit. The staff of this department: 1 foreman, 12 electricians, 1 labourer

—making a total of 14 men. This could be run as well with 6 or 7 electricians. A list of motors with their sizes and locations is given on page 88. A list of transformers with their size is given on page 88. See Appendix 'G' for form of contract.

POWER HOUSE.

The power house is under the chief electrician and has two men employed in it. One man attends to the switchboard, starting of motors for sawmill and the starting of motors for centrifugal pumps for house and fire service. The other man looks after the air compressor. We consider that this could all be attended to by one man. The equipment in power house consists of one 12 x 19 x 18 Canadian Rand drill compressor, Class d.2 running to 95 R.P.M. The air supply is altogether too small for the number of tools in use, the air pressure in power house being only 70 lbs. and sometimes 60 lbs., when for good work, especially on rivetting, it should be at least 100 or 110 lbs. The current is supplied to the board at 2,200 volts, 30 cycle, 2 phase A.C. current. They have a motor generator set for converting current to D.C. The generator set consists of a 300 H.P., A.C. 30 cycle, 2 phase H.P., 2,200 volt A.C. motor direct connected to a 200 K.W. 125 volt, 1,600 ampere D.C. generator. They cannot tell from switchboard the amount of current used in each department, and so divide cost of power as per motors in each department, which is only approximate at the best. The reading of instruments on the board D.C. current.

The centrifugal pump for house service is started from power house. These motors are 440 volts and 110 volt A.C., 220 volts A.C., and 110 volt D.C. light circuits. This is a great mistake; they should all be the same.

The motors in sawmill are 100 H.P. and 150 H.P., A.C. motors 440 volts. These motors are started from the power house. The man in the sawmill presses a button when he wants motors started or stopped. This button rings annunciator bell, the power house annunciator indicating which motor to start. This seems a very bad practice as we consider it dangerous, for if anything goes wrong in sawmill they have to run and press the button and the man in power house has to drop whatever he is at and run and shut off the motor, by which time considerable damage could be done in mill. There is also the possibility of the man in power house starting the wrong motor with serious consequences. The current on the two phase is not well distributed as one leg showed 72 amperes and the other 88 amperes which shows poor distribution. The power house is about the cleanest place around the whole establishment, and is very well kept, except for a few loose pieces of wire and things behind switchboard. The attendant seems to know his work very well as far as running the switchboard is concerned. They have a 125 H.P. 110 volt 950 ampere D.C. motor running the air compressor. This should be an A.C. motor, as it would save the cost of about 25 H.P. in the motor generator set. The distributing wires are all run exposed and held in place with cleats. These should all be run in conduit.

STABLES.

The stables are in a building by themselves and have accommodation for eleven horses, and the house is full. They have eleven horses hauling coal, material, &c., 75 per cent of which could be handled on the industrial railway which we think could be kept clear without any trouble by the eleven men required to drive the horses. The stables and horses are looked after by two men who are supposed to come in at 5 a.m. in the morning and look after the horses and harness them and have them ready for 7 a.m. and feed them at noon and fix them at night. There is no check kept on the men's time. The stables are very dirty as usual, and very poorly kept. The stable evidently is one of the favourite loafing places. The men congregate here and have a

smoke which is dangerous around a place like this. There were three teams of horses lined up outside when we visited the place, and the drivers were inside enjoying themselves.

The whole place smells very badly just now; what it will be in the summer time we can surmise—at any rate it is bad for the health of the horses and the men attending to them. The hot water hose and white wash brushes are very badly needed, and the men in charge warned to keep loafers out—notice boards to this effect might do good service.

EMPLOYEES.—SOREL SHIPYARD AS AT MARCH 16-31, 1912.

	Asbestos.	Blacksmiths.	Boiler Shop.	Drawing Office	Mould Loft.	Electric Dept.	Machine Shop.	Paint Shop.	Pattern Shop.	Steam Fitter Shop.	Yard.	Carpenter and Cabinet Shop.	Sawmill.

STEEL TWINSCREW STEAMER No. 21 'MONTMAGNY,' BUILT AT SOREL FOR LIGHTHOUSE SERVICE BELOW QUEBEC.

SPECIFICATION.

Length between perpendiculars		212 ft. – 8 in.
Length over all		222 ft. – 0 in.
Beam moulded		34 ft. – 8 in.
Depth moulded to upper deck		22 ft. – 0 in.
Draught of water (loaded) mean		15 ft. – 0 in.
Displacement to L.W.L		2,080 tons.
Cargo at load draught	600 tons.	
Coal at load draught	230 "	
Reserve feed tank at load draught	25 "	
Fresh water tank at load draught	10 "	
Total deadweight		865 "
Capacity of fore peak tank		13 "
Capacity of after peak tank		45 "
Capacity of double bottom		120 "
Capacity of trimming tank		85 "
Speed		11½ knots.

The vessel is built of steel and is of the flush deck type with two pole masts. There are three steel decks; the upper deck sheathed with wood throughout, the main and lower decks sheathed with wood only in the way of accommodation. There is a boat deck in way of the deck houses. There is a double bottom 3 feet deep extending through machinery space and bunker divided into three watertight compartments, that under the boilers forming the reserve feed tank. There are six watertight bulkheads. The whole of the steel scantlings are not less than required for Lloyds highest class. The accommodation for the officials is placed aft and consists of two storerooms, an office and bath room in a deck house, and a dining saloon, two two-berth cabins, two four-berth cabins, pantry and bath room, also baggage and linen rooms on the main deck.

Accommodation for captain, chief mate, chief engineer, 2nd and 3rd mates, wireless operator, with mess room and bath room, also the galley, is placed in the deck house amidships. Accommodation for 2nd and 3rd engineers, three two-berth and one

four-berth cabins are on the main deck amidships where are also placed the ice house, two provision storerooms, boatswain's store, paint locker, lamp room and workshop, which is fitted up with lathe, shaper, drilling machine, &c., driven by an electric motor. The accommodation for four oilers, four quartermasters, boatswain, carpenter, two cooks; mess room, bath room and carpenter's store is arranged on main deck forward and on the same deck just aft of this is accommodation for 12 sailors and 12 firemen. The lower deck below the petty officer's quarters is arranged as store room. Temporary accommodation for 20 men with pantry and lavatories is arranged at the after end of forehold on the main deck. The two lower masts are of steel to the hounds with pitch pin top masts. The 7 in. x 10 in. steam winch for the forehold is arranged with suitable derrick and gear for lifting 12 tons with a purchase of two double blocks or 3½ tons direct from the barrel. The 5 in. x 10 in. after winch will lift 2 tons direct from the barrel. There is a steam and hand windlass for lifting the anchors (30½ cwt. each with 1⅝ in. cable) a 6 in. x 8 in. boat hoisting winch is fitted on the bridge deck amidship. The boats include 2 life boats, 3 surf boats, 1 gasoline launch. The 4 latter have Welin patent davits. On the boat deck which extends the length of the midship deck house is a wheel house and chart room with a navigating bridge on top. The steam steering engine is placed in the engine casing with one wheel on the bridge and one in the wheel house, there is also screw-hand gear aft. The vessel is lighted throughout with electric light, including signal lanterns and is fitted with wireless telegraph.

The machinery consists of twin screw triple expansion engines, having cylinders 15 in., 24 in. and 39 in. diameter by 24 in. stroke supplied with steam from 2 boilers of marine return tube type 14 ft. 0 in. diameter by 10 ft. 0 in. long, each having three furnaces, 3 ft. 3 in. diameter and 272 3-in. tubes, the working pressure, 180 lbs. per sq. in.

There is a donkey boiler of the vertical type 5 ft. 0 in. diameter by 9 ft. 2 in. high, working pressure 125 lbs.

The auxiliaries include 'Weir's' feed pump, ballast pump, general service and fire pump, feed heater, sanitary and fresh water pumps, also ash ejector.

A navy type hand pump is placed in the casing and connected to the general service pump suction box for use when steam is not available.

Particulars of Main Boiler—

Inside diameter, 14 ft.
Length, 10 ft.
Shell 1¼ in. thick. Two plates in circumference, one plate in length. 1¼ in. rivets in longitudinal and circumference joints.
Three corrugated furnaces, 39 in. inside diam, and 17/32 in. thick. Make 'Brown's' cambered. The above furnaces have withdrawable ends.
178 plain tubes, 3 in. ext. diam. 6 ft. 9¾ in. long x 8 I.W.G. thick.
42 ordinary stay tubes ¼-inch. thick.
52 boundary stay tubes, ⅜-in. thick.
In all 272 tubes 6 ft. 9¾ in. long x 3 in. ext. diam.
Total heating surface for one boiler, = 1,731 sq. ft.
Total grate area for one boiler, = 58½ sq. ft.
Patent shaking grates 6 ft. long.
Weight of one boiler (bare, without mountings), 35 tons.
Working pressure: 170 lbs. per square inch.
Test pressure: Hyd. 255 lbs. per square inch.

Boiler Mountings—

One 3-in. double spring safety valve.
One main steam stop valve, 4½-in. bore.
One aux. steam stop valve, 3½-in. bore.
One steam to whistle, 2-in. bore. Starboard boiler only.

Boiler Mountings—Continued.

One bottom blow-off cock, 2-in. bore.
One surface blow-off valve, 1½-in. bore.
Two feed check valves, 2-in. bore.
One water gauge with 1½-in. connections.
Three test cocks, one salinometer cock.
One cock for pressure gauge connections.
One diamond tube blower and connections, fitted for each nest of tubes.

Auxiliaries—

Two vertical feed pumps, 'Weir's' make. Size 8-in. x 6-in. x 18-in. simplex.
One ballast pump, vertical duplex. Size 7½-in. x 10¼-in., x 10-in. 'Blake,' John McDougal, Montreal.
One general service pump, vertical duplex, 8-in. x 6-in. x 11-in. 'Drolet,' Quebec.
Two sanitary pumps, vertical simplex, 6-in. x 4-in. x 8-in., 'Blake,' John McDougal, Montreal.
One Donkey boiler feed pump, vertical simplex, 4½-in. x 3-in. x 6-in. 'Blake,' John McDougal, Montreal.
One 25 K.W. engine and dynamo, 'Robb Armstrong.' (200 lights all told. The search-light was supplied at Quebec).
One Contact feed heater, 'Weir's' make.
One feed water filter, Blackburn Smith, New York.
One See's ash ejector, Mechan's, Glasgow.
One steering engine, 6-in. x 8-in. 'Caldwell,' Glasgow.

Piping—

Steam and exhaust pipes—copper.
Winch pipes—copper.
Bilge pipes—lead.
Ballast pipes—cast iron, copper bends.
Dock water service—iron.
Water service to baths, &c.—galvanized iron.
Heating system to cabins, &c.—iron.

Donkey Boiler—

Type; vertical. Made in Sorel shipyard.
Size: 5 ft. diam. Height, 9 ft. 2 in.
Shell ½-in. thick, 2 plates in height, and one plate circumference.
Rivetting, ⅞-in. throughout.
Working pressure: 125 lbs. per square inch.
Test pressure: Hyd. 188 lbs. per square inch.
Tubes: 184 plain vertical tubes 2-in. ext. diam. x 9 I.W.G. thick.
24 stay tubes, 2-in. ext. diam. x ¼-in. thick.
In all 208 tubes 3 ft. 3 in. long.
Total heating surface, 388 square feet.
Grate area, 14 square feet.
Ordinary grate bars (circular).
Weight (estimated), bare boiler, 3¾ tons.

Donkey Boiler Mountings—

One 2-in. double spring safety valve.
One 2½-in. steam stop valve.
Two 1¼-in. feed check valves.
One 1¼-in. blow-off cock.
One 1-in. surface blow-off valve.
One water gauge, direct on shell.
Three test cocks.

Main Engine, Twin Screw—

Three cylinder 15- in. – 24-in. – 39-in. inverted triple expansion surface condensing engines.
24-in.

Makers: Fleming & Ferguson, Paisley, Scotland.

Collective I.H.P. about 1,200. Revolutions: 140 about.

Piston valves for H.P. Ordinary slide valves for I.P. and L.P. cylinders.

Reversing engine (steam), of the direct acting type. Hand gear consists of large lever on end of wiper shaft.

Columns—

Cast iron. The three back columns and condenser are cast in one piece. Guide faces on both back and front columns.

Pumps—

Circulating air, feed and bilge pumps are attached to back of condenser and worked by levers on I.P. engine.

Turning Gear—

Hand worked by ratchet.

Crank Shaft—

7½-in. diam. long, 7 collars 14-in. diam.

Thrust Shaft—

7½-in. diam. x 5 ft. 4¾ in.

The vessel was designed and model made 28th March, 1907.

The steel material was ordered 29th June, 1907.

The steel material began to come to hand February, 1908.

Building was commenced 18th May, 1908.

Keel laid, July, 1908.

Launched 4th September, 1909.

Trial trip 2nd July, 1910.

Delivered 3rd July, 1910.

Three years and three months to build.

The reason we hit upon comparing the cost of building this vessel with an estimate of what she ought to have cost was that the vessel was of recent build and of rather different type to the usual construction at the yard.

We had a great amount of trouble to get at actual cost and weights—records of any kind were in the negative. After persevering, we found they had kept the cost of this vessel and machinery under 113 separate numbers. It took the staff fully two weeks to get out these figures, and then they were found to be incorrect, the one being mixed up with the other. We could not get a specification or weights of steel used in construction; in fact, they had no data of any kind; we had to ferret it out for ourselves. We cross-examined the foreman carpenter, as to various items charged up, such as—

Scaffolding, $5,522.61—of this amount about $2,000 were charged against carpenters. Asked why carpenters were employed on this work (which is really labourers' work) he replied it was usual to have carpenters to do part of it. About $2,000 was charged against material and the remainder for labourers, &c.

This whole charge is excessive and a rebate should have been arranged as most of the wood used will answer again for other vessels under construction.

The scrieve board cost $312, which is out of all character; the wood used should have been credited to the ship and used again; instead of that it was taken to make shelters for the men, and that was the end of it, and this ship had to pay for it.

Wooden foundations—which means keel blocks, &c., cost $3,193.38—$1,808 of this is for wood which should be used again for the same purpose.

Launching ways, amounting to $4,436.83, of which $2,316.85 was charged for wood, &c.; the same remark applies here. The launching operation cost $6,511.73; a most extraordinary amount of money to launch a boat of the size.

The engine room skylight cost	$1,265 66
Asbestos boiler covering cost	1,398 36
Fire hold and engine room grating cost	1,618 37
Accommodation ladder	627 96

All these amounts are grossly in excess of what they ought to be. The iron work cost we were most anxious to find out but it is an utter impossibility.

The moulding loft work on this vessel cost $12,000, nearly $9,000 for labour, which is an excessive charge and shows that this department is not handled properly. In fact, the whole carpenter department wants to be rooted out and reorganized.

The oakum is bought unspun and two men kept all the year around to spin it by hand in a shelter. Machine-spun oakum can be bought very much cheaper. Our estimate is liberal and it shows that a loss of 29½ per cent was made on the hull and equipment.

ELEVATOR DREDGES Nos. 26, 27—NON-PROPELLING—BUILDING AT SOREL FOR USE IN THE ST. LAWRENCE SHIP CHANNEL.

SPECIFICATION.

Length B.P.	180 ft. – 0 in.
Breadth moulded	40 ft. – 0 in.
Depth moulded	14 ft. – 0 in.
Draft loaded (mean)	9 ft. – 0 in.
Deadweight at load draft	197 long tons.
Dredging depth extreme at the load draft	52 ft. – 0 in.

The vessels are built of steel, the scantlings being nowhere less than Lloyds requirements for their highest class and increased where necessary to withstand the strain of dredging. There are five watertight bulkheads and two non-watertight. The only W.T. bulkhead with an opening is between the engine and boiler room and a watertight door is fitted each side of the ship worked from the upper deck. There is a complete steel upper deck covered with 2½-in. pitch pine forward and aft, the plating being chequered elsewhere. There is a shelter deck at each end carried on stanchions; the mess room and accommodation for the junior officers and engineers, petty officers, cooks, refrigerators, pantry and galley are in deck house on the forward part of this deck and the cabins of the captain, chief engineer and chief second officers and a bath room are on the after part. The crew's quarters are on the port side below the upper deck at the forward end of well; there is accommodation for watchman, 2 oilers, 4 winchmen, 4 firemen and 6 sailors, also a storeroom.

The dredging engine is placed on the back of the main framing which is the after end of the vessel and built in a very substantial manner of steel plates and angles and carried by columns of semi-box form which are carried down to the top of the floors and connected to two of the bulkheads and to an extension of the well plating. There is one shoot which is placed on the port side and has a hinged part extending 14 feet over the side of the vessel and discharging 6 feet above the L.W.L.

The dredging engines are compound, having cylinders 17 in. x 34 in. x 36 in. stroke. In the engine room at the after end of the vessel under the upper deck, the auxiliaries consisting of a Weir's feed pump, Weir's feed heater, general service pump, shoot pump, sanitary pump and feed filter. The stern winch and dynamo are also in this compartment.

The bucket ladder, which is built of plates and angles and weighs complete with the bucket chain about 150 tons, is suspended at its upper end on the main framing and is carried at the forward end by 5 sheave blocks and 2½-in. wire ropes from the 'A' frame, which is built of plates and angles carried on columns of semi-box form.

The buckets are of cast steel with 4 wrought iron cutting teeth having tool steel points; they are 43 in number and the capacity of each bucket is 15 cu. ft. The dredging speed is about 16 buckets per minute. The hoisting winch is driven by a double vertical engine having cylinders 10 in. x 12 in. and is capable of lifting the ladder at a speed of 7 feet per minute.

The bow cable winch is driven by a similar engine and is capable of pulling in the rope at a speed of 100 ft. per minute in the working conditions. The barrel is large enough to stow 2,000 feet of 1½ in. dia. wire rope, the weight of the bow anchor is 3,000 lbs.

The 2 breasting winches have double horizontal cylinders 8 in. x 12 in. stroke with 2 barrels working in opposite directions, each barrel stows 1,000 feet 1¼ in. dia. wire rope and the weight of each anchor is 2,000 lbs. The stern winch, which has double horizontal cylinders 10-in. x 12-in. with barrel capable of stowing 1,500 feet 1¼-in. dia. wire rope; the weight of the stern anchor is 2,000 lbs. Two steam capstans having cylinders 7-in. x 8-in. stroke are fitted on deck for manœuvring scows &c. A winch

having cylinders 6 in. x 6 in. stroke is fitted for lifting the hinged shoot. The machinery is supplied with steam from two marine return tube boilers 12 ft. dia. x 10 ft. long, having a working pressure of 130 lbs. per sq. inch and working with natural draught; they are placed one on each side of the vessel just forward of the main framing. Each stokehold is fitted with a See's ash ejector. The bunkers are placed one on each side forward of the stokeholds, with large hatches on deck. A five tons hand derrick for lifting buckets is placed on the starboard side abreast of the ladder.

An electric generator with a complete installation of lamps, including a searchlight, is fitted.

All the accommodation is steam heated and all the cabins on the shelter deck including bath room, W.C. and galley, are supplied with running water.

Main Engines (Dredging)—

One set compound jet condensing engines, connected direct to gear and attached to back of main framing (i.e. superstructure for carrying top gearing) above main deck.

Size: 17 in. – – 34 in. working pressure 130 lbs. per square inch.
36-in.

Revolutions at a speed of 16 to 17 buckets per minute. (I.H.P. – 450).

Makers: Fleming & Ferguson, Paisley, Scotland.

There are no pumps worked by main engines.

Steam reversing engines direct acting type.

Steam turning gear.

Front columns are forged steel.

No back columns, their place being taken by a long bed-plate to which the cylinders are bolted. The main bearings are cast on bed-plate.

Crank shaft: Built 8¼-in. diameter.

Piston rod guides are of the locomotive type with single bar.

Governor—

A Pickering governor is supplied to prevent excessive speed.

Auxiliaries—

One feed pump, 'Weir's,' simplex, 7-in. x 5-in. x 12-in.

One general service pump, 'Drolet's,' vertical duplex, 6-in. x 4-in. x 6-in.

One shoot pump, 'Fairbank's' horizontal duplex, 8-in. x 6-in. x 12-in.

One sanitary pump, 'Blake' horizontal duplex, 4½-in. x 3¾-in. x 4-in.

One engine and dynamo 11 K.W., Robb Engineering Co.

One feed heater, 'Weir's' surface type.

One feed water filter, 'Harris.'

One jet condenser and air pump combined, 'Blake.' Size of air pump: 12-in. x 18-in. x 24-in.

Boilers—

Two Scotch marine, single ended, 11 ft. 10 in. diam. inside x 10 ft. 0 in. long.

Working pressure: 130 lbs. per square inch.

Test pressure (Hyd.): 195 lbs. per square inch.

Shell 13/16 in. thick. One plate in length, 2 plates in circumference.

Longitudinal joint ⅞-in. riveting circum. joint 1⅛-in. riveting.

Two 'Brown's' cambered furnaces 3 ft. 4 in. diam. inside, 7/16 in. thick, with drawable ends.

136 plain tubes, 8 I.W.G. thick.

58 stay tubes, 5/8 in. thick.

In all 194 tubes 3-in. ext. diam. and 7 ft. 0 in. long.

Total heating surface: 1,209 square feet.

Grate area: 40 square feet.
Patent shaking grates, 6 ft. 0 in. long.
Weight of one boiler (bare) (shell only) without mountings: 47,500 lbs. 21·2 tons (long).

Boiler Mountings—One Boiler—

One 3-in. double spring safety valve.
One 4-in. main steam stop valve.
One 3½-in. aux. steam stop valve.
Two 2-in. combined stop and feed check valves.
One 2-in. bottom blow-off cock.
One 1½-in. surface blow-off valve.
One water gauge with 1½-in. connection.
Three test cocks.
Funnels. (2 off).
Weight of two together—8,055 lbs.—3·6 tons (long).
Smoke boxes. (2 off).
Weight of two together—5,400 lbs.—2·4 tons (long).
Two ash ejectors—own make.

Piping—

Steam and exhaust, copper.
Winch pipes, partly of iron and partly of copper.
Bilge pipes, lead.
Sanitary pump connection, iron.
Heating system, iron.
Main exhaust and air pump discharge, cast iron.
Deck water service, iron.
Other pipes, copper generally.

Frames, 4½ x 3 x 7/20 spaced 24 inches.
Rev. , 3 x 3 x 7/20.
Floors, 21½ x 8/20 and 9/20-in. machy. space. 10/20 in way of boiler.
Shell, keel 12/20, bottom 8/20 and 9/20, bilge 10 to 9/20, lower side 8/20, upper side, 10 to 9/20, sheer 12/20.
Well 10/20.
One bottom side keelson and two side stringers on ship's side and well sides.
Double fenders all fore and aft (top sides).
Frames, rev. floors, flat keel, C.V.K. and rider and side keelsons and part of shell, ordered 29th June, 1909.
Material commenced to come to hand, Sept., 1909.
Bulkheads, balance of shell, decks, stringers, beams and well plating and bulwarks, ordered 16th Sept., 1909.
Main framing. A frame and bucket ladder, ordered 17th Jan., 1911.
Commenced building, Dec., 1909.
No. 26 launched, 22nd Nov., 1910.
No. 26 will be finished, June, 1912.
——17 months from date of order of material to day of launching; and
——19 months to finish after launch—36 months to build.

(DREDGE 26). ESTIMATE OF MACHINERY AND BOILERS.

Dredging machinery includes engines and gearings, wheels, top and bottom tumblers and bearings for same. Bearings and shaft for top end of ladder and small turning gear.		
Fleming and Ferguson's contract (includes duty)		24,190 00
Sorel work, erecting above machinery on ship, &c		1,800 00
Machine shop, general work		2,560 00
Buckets, links, pins &c. (i.e. bucket chain). Contract per Mr. Bridges $18,100. Labour $900		19,000 00
		$ 47,550 00
2 main boilers, smoke boxes, etc		10,600 00
Auxiliaries, pumps, ash ejector, etc		4,000 00
Piping and sundries		6,000 00
		$ 68,150 00
Maintenance 20 per cent		13,630 00
		81,780 00
Hull	$ 153,386 00	
Machinery	81,780 00	
	$ 235,166 00	(say $230,000).
Cost	280,000 00	
Estimated proper cost	230,000 00	
Saving	50,000 00	—18 p.c.

These dredges have been a long time in building and various charges, such as machine shop, blacksmith, boiler-makers, pattern makers, painting, yard, carpenters, caulkers, mould loft and drafting are excessively heavy, and but for the fact that the dredging machinery was purchased cheap, from an outside contractor, the total cost would have been considerably more.

The workmanship on the hull and machinery is very good, but extravagance in weight of material is very apparent throughout and a great want of proper thinking and scheming on the part of the drawing office officials (both hull and machinery). With proper supervision and management, these dredges could be produced at 18 to 20 per cent less cost and be in commission very much earlier, which is a condition worthy of consideration.

NOS. 36 AND 38 TWIN SCREW TUGS NOW BUILDING.

Length B.P. 84 ft. 6 in. O.A. 92-0 x 22-0 x 10-6 moulded.
Frames 3 x 3 x $\frac{1}{4}$ spaced 21 inches.
Reverse frames $2\frac{1}{2}$ x $2\frac{1}{2}$ x $\frac{1}{4}$.
Bulkhead frames, single, $3\frac{1}{2}$ x $3\frac{1}{2}$ x $\frac{7}{16}$.
Collision B.H. frames, single, 4 x 4 x $\frac{7}{16}$.
Floors, $11\frac{1}{2}$ x $\frac{1}{4}$-in., $\frac{5}{16}$ in engine space, and $\frac{9}{16}$ under boilers.
Shell plating, $\frac{5}{16}$ to $\frac{1}{4}$.
Keel plate, $\frac{7}{16}$ to $\frac{3}{8}$.
Centre through vertical keel plate, $\frac{5}{16}$.
Centre through vertical keel angles, 3 x 3 x $\frac{1}{4}$.
Side keelson, double angles, 3 x 3 x $\frac{1}{4}$.
Side stringer, double angles, 3 x 3 x $\frac{1}{4}$.
Beams, $4\frac{1}{2}$ x 3 x $\frac{5}{16}$ on every frame.
Bulkheads, $\frac{1}{4}$-in.
Bulkhead stiffeners, $4\frac{1}{2}$ x 3 x $\frac{5}{16}$ space 30 inches.
Rivets all $\frac{5}{8}$ except flat plate keel, which will be $\frac{3}{4}$-in.
Rivets, spacing to Lloyds.

We overhauled this tug with Mr. Terreault, 22nd March, and asked him the reason for the following:—

Why are frames and reverse frames riveted together instead of a single bar?

Why have set floors on every frame from end to end of the boat when straight floors would do?

Why have keelsons made of double angles riveted back to back when a single bar would answer the same purpose?

Why the floors are punched out of solid plates instead of furnacing them, if they must run up the bilges?

Why the stem is made in three different pieces all welded together? The top part is a steel forging, the fore foot part is cast steel and the web end is made of steel plate—(a single rolled steel bar all in one piece would answer the purpose, and is universally adopted).

The sternpost is made of cast steel and the keel part is fancy shaped to suit the run of the waterlines, and the forward part is dished out. (Most absurd).

Bulkhead frames are close double riveted.

The connections of keelsons to bulkheads are excessively large.

The coal bunker walls are stiffened with $3\frac{1}{2}$ x 3 angles spaced same as the main frames and carried down over the bottom bar and tapered slips fitted—(stupid to do such things). The bunkers are quite narrow—the walls are far too heavily constructed.

Shell plate butts are strapped and double riveted while they ought to be lapped—this makes a better job, less weight of material and fewer rivets.

The watertight bulkhead collars over keelsons, &c., are made of cast steel, a thing we have never come across in all our career. It means making a separate pattern for each, and steel castings are not easily got in this country. The cost of a steel casting as against an angle smith job is prohibitive.

Anywhere you look over this tug everything seems to have been designed to cost the most money.

Certainly those responsible do not know their work and are not modern shipbuilders. Money is flung away right and left.

To all these questions, Mr. Terreault blamed other people, especially a man Bourgeois, who has gone seven months ago and was here four years, and that it was a case of use and wont. We think it is a case of want of knowledge all round, not looking into matters and considering the cost and modern ways of working. They are simply years behind in their methods and no one knows any better.

(We were told by Mr. Terreault that the cost up to date including engines and boiler, wood work, &c., was $19,000, and we were pleased as this looked reasonable; but to-day we are told that on further investigation the cost is over $30,000).

Even 3-in. limber holes in keelsons are drilled instead of being punched out.

Sidelights are punched out and dressed.

No attempt made at joggling, scraping, flanging, &c., which is all against good modern practice (and no piece work).

A case of gross insubordination came under our notice when overhauling this tug. A riveter or a rivet heater, don't know which, immediately we passed commenced to sing and kept howling at the pitch of his voice. We asked Mr. Terreault, who was with us, what he did in a case of that kind (the man was evidently drunk)? He said he could do nothing except report to Mr. Papineau. That man, to give him his deserts, should have been fired on the spot by Mr. Terreault, as it is impossible for him to have any command over the men if they can do such things right in his face. On Mr. Terreault reporting to Mr. Papineau what the man was doing (and that we had said if the yard was ours he would have been fired in two minutes), he was not paid for the afternoon.

It is quite apparent that Mr. Terreault has no command and no authority to interfere in any way.

Riveters work four in a gang, instead of three, one man is always idle—asked the reason and were told it was simply the custom.

—	No. 38.	No. 36.
Material ordered	October 8, 1910.	September 26, 1910.
Material commenced to come to hand	February, 1911.	February, 1911.
Commenced to build	July 21, 1911.	July 21, 1911.
Will launch	May, 1912.	June, 1912.
Finish	June 15, 1912.	August 15, 1912.
Are engines on board?	Yes.	No.
Are boilers on board?	Yes.	No.
Cabin work	Well advanced.	None.

The above statement was got from Mr. Terreault and Mr. Bridges, 23rd March, 1912.

We are informed the building of these boats was not pressed, sometimes only a few men employed.

It appears to us hanging so long over a job and changing the few men there were that the men will be disheartened and simply plod along killing time.

As to the question of cost—it has been a most difficult matter to get figures, and after we do get them we are not sure about their being correct—however, in the case of the tug we have investigated as far as possible, and find that No. 38 will cost when finished $40,000, our estimate of the cost, allowing the same weight of material as they have (which is too high) and ample for government class of work, is $30,000.

There seems to be no regard taken as to efficiency and location of material, due to strength, &c.

The same remarks apply to both hull and machinery, many of the patterns are old fashioned and very heavy—a lot of them should be destroyed.

BOILERS FOR TUGS NOS. 36 AND 38.

Single ended Scotch boiler, 11 ft. 10 in. inside x 10 ft. 0 in. long.
Two furnaces corrugated, 'Brown's' cambered withdrawable ends.
Diameter inside corrugation, 3 ft. 4 in., $\frac{1}{2}$ thick.
Thickness of shell, $\frac{15}{16}$ in.

Size of rivets, longit. joint, $\frac{7}{8}$-in., circum., $1\frac{1}{8}$ in.
How many plates in the round, 2.
How many plates in the length, 1.
No. of tubes, 136 plain 8 W.G. thick x 7 ft 0 in. long.
No. of tubes, 58 stay tubes $\frac{5}{16}$ thick x 7 ft. 0 in. long.
Heating surface. Total, 1,209 square feet.
Grate area, 36 square feet.
Working pressure, 150 lbs. per square inch.
Hyd. test, 225 lbs.
Grates, patent shaking grates, 5 ft. 6 in. long.
Funnel—(inner) 3 ft. 0 in. dia. x 22 ft. 0 in. high above smoke box.
(outer) 4 ft. 0 in. diam. x 21 ft. 6 in.
Weight of both complete, 3,850 lbs (estimated).
Weight of boiler (bare), 24 tons (estimated). (i.e., steel plates and rivet heads).
Weight of smoke box, 1,950 lbs (estimated).

BOILER MOUNTINGS.

3-in. double spring safety valve.
(2) Main steam stop valves, $3\frac{1}{2}$ bore.
Aux. steam, $2\frac{1}{2}$-in.
Steam to whistle, $1\frac{1}{2}$ in.
Steam to injector, $1\frac{1}{4}$ in.
Steam to heaters (cabin), $1\frac{1}{4}$ in.
Gauge glass, 1-in. Steam and water connection.
(2) Feed check valves. 2-in. combined globe and check.
Bottom blow-off, 2-in. cock.
Main steam pipes copper.
All the other connection are iron (practically).
Feed pump, duplex, vert. $5\frac{1}{4}$-in. x $3\frac{1}{2}$-in. x 6-in.
General service pump, duplex horiz., 6-in. x 4-in. x 6-in.
Sanitary pump, duplex horiz., 3-in. x 2-in. x 4-in.

TWIN SCREW ENGINES FOR CONSTRUCTION NO. 36 AND 38.

Description—

Inverted compound two crank jet condensing engines.
Size: H.P. 11-in. diam. L.P. 22-in. diam.
Stroke, 18-in.
Piston valve for H.P.
Slide valve for L.P.
Steam and hand reversing gear.
Edward's air pump, feed and bilge pump, are worked by lever from L.P. cross-head.
Back and front columns, cast iron.
Diam. of propeller shaft, $5\frac{1}{2}$-in.
Diam. of crank shaft, $5\frac{3}{8}$-in.
Length from thrust to propeller, 19 ft. 0 in. to cr. of propeller. (Thrust shaft not included).
Length of thrust shaft, 3 ft. 9 in. x $5\frac{1}{2}$-in. diam (4 collars $12\frac{1}{2}$ diam.)
Propellers cast iron, solid, 4 blades, diam, 6 ft. 0 in., pitch 8 ft. 6 in.
Revolutions of engines, 160.
I.H.P., 350 collective.

WOOD DUMP SCOWS.

CONSTRUCTION NO. 34.

It appears to us that building wood dump scows is a mistake financially (there may be reasons why they should be of wood which we do not know), but at any rate these scows are being built by the foreman carpenter, Mr. Nap. Bateau, who seems to do so in his own way; no one knows anything about how they are being built but himself. We think they are excessively heavy in construction.

The dimensions are 94 ft. 0 in. x 26 ft. 0 in. x 9 ft. 0 in., and they cost each $15,770 launched complete ready for work.

The same scows built in steel would cost $12,930, showing a difference of $2,840.

(To prove that this statement is correct we know two scows that were built in steel of very heavy construction, equal to Lloyds for scantlings and riveting, with all outfit complete 130 ft. 0 in. x 30 ft. 6 in. x 10 ft. 0 in., actually cost $14,725 to build).

Steel makes a better scow and is 50 tons lighter, carries at least 50 tons more spoil all the year round. The lifetime of a steel scow will be twice that of a wood one.

The only thing in favour of a wood scow is stranding and knocking about, but steel scows can be protected by fenders to withstand anything and are altogether better in every way.

These figures show for themselves our contention as to the cost of wood dump scows built here; two are finished and away and four more are in hand now.

There are a lot of elderly men working in a leisurely way, and as they move about they have wind screens, they move with them; and a very hot stuffy store place where two men are kept spinning oakum and keeping the stove burning. A great deal of time seems to be spent in this store, it is so comfortable.

The steel scow would float a great deal lighter and therefore carry more spoil.

Mr. Papineau explains that one reason for building wood scows is to have work to keep carpenters on hand in summer for slipping vessels and repairs, also that they stand stranding and knocking about better. We think that very questionable, as steel scows can be protected to any extent, and in modern practice wood scows are not built —this pertains the same in the old wooden ships days and the present day "all steel." Wood scows get very heavy and sodden in time, and are therefore worse to handle and more costly to tow.

All labour is done by hand, they don't even have a band saw or a boring tool except at odd times the assistance of an air boring machine.

NOTES.

The boiler makers and shipbuilding departments ought to be under separate and distinct responsible foremen as the trades are totally different and have little or nothing in common with each other.

The average rate of wages paid is rather low in comparison with other Canadian yards and engineering workshops, probably due to the fact that the men are not properly qualified tradesmen. If this is the case then the excessive cost is somewhat explained, because good tradesmen will not work at the rates paid at Sorel just now. To pay even low rates of wages to inferior workmen is not good business; far better to get first class tradesmen and pay them accordingly (at least leading hands). We do not advocate a general rise in wages. The whole wages question requires to be looked very carefully into; perhaps in many cases the men are being paid more than they are worth.

Some system wants to be inaugurated to keep track of the amount of coal consumed; the initial cost, cost of haulage, supplies to fleet, &c.

Miscellaneous Tools.—After stock of these has been taken and valuation made of the tools in each department, they should all be returned to the store, and on a requisition from the foreman as many as are necessary to carry on the work given out, and a proper inventory kept both in the store and the shops. This would simplify matters at stock taking time, as these tools are always being added to as they get worn out and so forth.

We checked several steel invoices and found the rolling margin to run from 3 per cent to 1½ per cent over calculated weight, which is fair and reasonable, but this wants to be attended to.

Messrs. Price, Waterhouse & Co. have overhauled the timekeeping and will doubtless report to the Commission, therefore we will not add any more to our remarks on this subject.

When stock taking is finished we would suggest that the stock is checked with the stock books to see how they tally.

SESSIONAL PAPER No. 57

STATEMENT OF SHOP EXPENSE FOR FISCAL YEAR 1908-09 -THE DEPARTMENT OF MARINE AND FISHERIES -GOVERNMENT SHIP YARD, SOREL PREPARED BY THE COST DEPARTMENT, APRIL, 1909.

Shop sundries		898 78
Pneumatic tools:—		
Machine shop	$ 742 77	
Pipe shop	36 12	
Maintenance of air hose	729 23	
Stores	2,162 85	
		3,670 97
		$ 40,349 81

	1907-08	1908-09	1909-10
Direct wages were	$ 64,341 05	$ 74,721 44	$ 83,204 27
Indirect cost to be added to above	43,036 99	43,305 12	40,349 81
Percentage of indirect to direct	67 p.c.	58 p.c.	48$\frac{49}{50}$ p.c.

CABINET SHOP.

Wages of foreman and sundry help, not distributed	378 37
Power, heat and light	2,082 00
Yard	55 56
Proportion of non-producing departments	335 18
Teamsters	22 04
Saw mill	307 40
Building repairs	21 74
Electrical shop	124 81
Shop sundries	124 57
Stores	132 40
	$ 3,584 07

	1907-08	1908-09	1909-10
Direct wages were	$ 3,026 98	$ 3,742 56	$ 3,451 47
Indirect cost to be added to above	3,976 98	3,438 19	3,584 07
Percentage of indirect to direct	131⅓ p.c.	92 p.c.	35$\frac{34}{100}$ p.c.

N.B.—The decrease of percentage in 1909-10 is explained by the fact of the wood-working departments, *i.e.* cabinet shop, carpenter shop, caulkers and saw mill, being under the charge of the same foreman, closely related to each; a uniform percentage was calculated for the above mentioned departments.

CARPENTER SHOP.

Wages of foreman and sundry help, not distributed	$ 1,449 85
Power, heat and light	78 00
Proportion of non-producing departments	3,618 20
Stores	227 36
Saw mill	246 08
Blacksmith shop	46 87
Building repairs	12 55

Average Percentages of all shops together :—1907-08, 54⅞ p.c. ; 1908-09, 46¾ p.c. ; 1909-10, 38 85 p.c.

The difference in the percentages of the following during the fiscal year 1909-10, is explained by the fact that cabinet shop, carpenter shop, caulkers and sawmill being under the same foreman and closely related to each other, a uniform percentage was calculated for these wood-working departments. The same arrangement for previous years would have given the following:—

1907-08	$55^{79}/_{100}$ per cent.
1908-09	$40^{23}/_{100}$ "
1909-10	$35^{34}/_{100}$ "

APPENDIX "A"

PARTICULARS OF BUILDINGS IN SOREL SHIP YARD.

No. of Building.	Description.	Size.	Used For.	Remarks.
	NEW BOILER SHOP.			
2	Made in three parts: boiler shop on piles, steel structure, double boarded, sheet iron roofing on boards, large windows; rollers shop, concrete foundations, steel structure, board and sheet iron roofing, double boarded, large windows; janitor's office on piles, triple boarded—floor and ceiling, board and sheet iron roofing.	Boiler shop 200 ft. long and 60 ft. wide, 20 ft. columns; Rollers shop 62 ft. long x 36 ft. wide, 20 ft. columns; Janitor's office 22 ft. long x 12 ft. wide, 12 ft. studs.	Boiler shop, Roller's shop and Janitor's office.	Good condition.
	OLD BOILER SHOP.			
3	Old building on piles, wooden framed, half single boarded and half double boarded, board and shingle roofing; first story on ground, second story with a good floor and ceiling, good windows; one part is sheet iron roofed, about 40 ft. x 30 ft.	233 ft. long, 31 ft. 6 in. wide; 15 ft. studs.	1st story as shape bending shop, boiler shop and steamfitter shop—also an office for yard. Second story used as a mould loft.	Fair condition.
	OFFICES AND STORES.			
4	Old building, on piles, wooden, framed; one part triple boarded, one part double boarded, good floors and ceiling, small windows, board and shingle roofed.	267 ft. x 31 ft., 16 ft. studs.	Offices and stores; also serving department	
	MACHINE SHOP.			
5	Main body: stone foundation, solid brick built three story high with iron doors, wooden framed, board and sheet iron roofed; the two aisles on piles, wooden framed, large windows and sky lights, double boarded, board and sheet iron roofed, good floors, strong timber.	Main body: 60 ft. x 30 ft., 35 ft. walls; one aisle 120 ft. x 50 ft., 21 ft. studs; other aisle 99 ft. x 50 ft., 21 ft. studs.	Main body is fire hold No. 1; one aisle is machine shop, the other is machine shop at first story and pattern shop at 2nd; 2nd and 3rd stories of main body are used to keep patterns.	Good condition.
	BLACKSMITH SHOP.			
6	On piles, wooden framed, double boarded, large windows, board and sheet iron roofed.	85 ft. x 60 ft., 18 ft. studs.	Smithshop with an annex for the horse shoer.	Poor condition.
	WIRE ROPES, IRON AND WOOD STORE.			
7	On piles, wooden framed, shingle boarded, sheet iron and board roofed, front side with rolling doors.	190 ft. x 18 ft. 6 in., 13 ft. studs.	Waste shed contains wood, iron, life boats, &c.	Good condition.
	STABLES AND STORE.			
8	On piles, wooden framed, half double boarded, half single boarded, good floors, small windows, board and shingle roofed; good divisions in stable.	100 ft. x 26 ft., 12 ft. studs.	Half used as stables and half as store and carriage room; second story for hay and grain.	Fair condition.

PARTICULARS OF BUILDINGS—*Continued.*

No. of Building.	Description.	Size.	Used for.	Remarks.
	SPAR SHED.			
9	On piles, wooden framed, single boarded, sides movable, no floor, no windows, board and sheet iron roofed.	100 ft. x 30 ft. 6 in., 12 ft. studs.	Carpenter shop opened all around when wanted.	Fair condition.
	ICE HOUSE.			
10	On piles, wooden framed, quadruple boarded, double ceiling, board filled with sawdust, board and shingle roofing.	50 ft. x 24 ft., 12 ft studs.	Ice house.	Good.
	RIVET SHED.			
11	On piles, double boarded, floors, small windows, board and shingle roofing.	60 ft. x 26 ft., 12 ft. studs.	Shed for rivets and nails.	Good.
	RIVET SHED.			
12	On piles, double boarded, floors, small windows, board and shingle roofed.	61 ft. x 26 ft., 13 ft. studs.	Shed for rivets and nuts.	Good.
	MANILLA SHED.			
13	On piles, double boarded, floors, double windows, board and shingle roofed.	33 ft. x 26 ft., 14 ft. 6 in. studs.	Shed for manilla ropes.	Good.
	OIL SHED.			
14	On piles, double boarded, floors, double windows, board and shingle roofed.	24 ft. x 21 ft., 14 ft. 6 in. studs.	Shed for oils.	Fair.
	FLEET STORE.			
15	On piles, three story building, wooden framed, double boarded, board and sheet iron roofed, good windows and locked rooms, stairs and elevator.	100 ft. x 30 ft. 6-in.; 28 ft. studs.	Fleet furniture winter quarters.	Good new building.
	POWER HOUSE.			
16	Solid brick building with outside in Laprairie pressed brick, limestone trimmings, stone foundations, concrete floor, steel structure, fire proof building, appendix containing waterworks in sub-soil concrete, piles under concrete foundations.	53 ft. x 33 ft.; 20 ft. columns.	Power house.....	Good new building.
	SAWMILL.			
17	Main body : concrete foundation resting on piles to strengthen the soil, steel structure, double boarded, spacious basement, sheet iron and board roofed, good windows and doors, two similar aisles on piles, wooden framed, single boarded, board and sheet iron roofed, good windows, an annex for w.c. on piles.	Main body 70 ft. x 60 ft.; 28 ft. columns ; aisles 55 ft. x 28 ft., 13 ft. studs ; w. c. 10 ft. x 8 ft., 8 ft. studs.	Basement contains motors and shaftings ; 1st story, sawmills and offices ; 2nd story, cabinet shop and the saw filing installation.	Good new building.
	PAINT SHOP.			
18	On piles, wooden frame ; new building, good windows and doors, triple boarded, board and sheet iron roofed, particularly good floors, ceilings, stairs inside and outside.	170 ft. x 35 ft., 19 ft. studs.	1st story as paint-shop decoration room and asbestos department ; 2nd story all along for a mould loft.	Good new building. Good.

PARTICULARS OF BUILDINGS—*Continued.*

No. of Building.	Description.	Size.	Used for.	Remarks.
	PATTERN SHOP.			
19	On piles, double boarded, wooden framed, three floors, good windows and doors, board and sheet iron roofed.	100 ft. x 30 ft., 28 ft. studs.	Shed for patterns...	Good new building.
	DRY WOOD STORE.			
20	On piles, wooden framed, single boarded, rolling doors, board and sheet iron roofed, interior divided into racks.	51 ft. x 26 ft., 16 ft. studs.	To keep dry wood coming from dry kiln.	Good.
	No. 2 FIRE HOLD.			
21	Concrete foundation, wooden framed, but space is allowed to put a 12-in. solid brick wall; double boarded, concrete floor and concrete base to boilers, board and sheet iron roofed.	53 ft. x 28 ft.....	Fire hold No. 2 receiving fuel from sawmill by a fanner.	Good new building.
	CASTING SHED.			
22	On piles, wooden framed, single boarded, rolling doors, good windows, floors, board and sheet iron roofed; the annex is a platform to put castings outside, and around all is a fence forming a square with doors locked.	51 ft. x 32 ft., 18 ft. studs; platform 100 ft. x 35 ft.; square space locked, 130 ft. x 80 ft.	Shed for castings. 1st story for middle weight castings; 2nd story for brass and finished pieces; heavy castings on platform.	Good.
	DRY KILN.			
23	On piles, quadruple boarded, wooden framed, double ceiling, hoisting doors, ventilators, board and sheet iron roofed.	51 ft. x 26 ft., 11 ft. studs.	Dry kiln	Good.
	MACHINERY SHED.			
24	On piles, wooden framed, double boarded, good floors, board and sheet iron roofed.	56 ft. x 36 ft., 17 ft. studs.	Shed for machinery..	Good.
	ANGLE BENDING SHED.			
25	Concrete pillars, wooden framed, single boarded, opened arched front, board and sheet iron roofed with portable panels.	50 ft. x 25 ft., 10 ft. studs.	Shape bending forge.	Poor.
	NEW WAYS WINCH BUILDING.			
26	Pile foundations, wooden framed, single boarded; one side opened, board and sheet iron roofed.	24 ft. x 19 ft., 11 ft. studs.	New ways hoisting winch building.	Good.
	SCALE HOUSE.			
27	On piles, wooden framed, single boarded, board and shingle roofed.	27 ft. x 16 ft., 10 ft. studs.	Platform scale house.	Good.
	REELS BUILDING.			
28	On piles, wooden framed, single boarded, board and shingle roofed.	27 ft. x 16 ft., 10 ft. 6 in. studs.	Reels for fire apparatus building.	Good.
	OLD WINCH HOUSE.			
29	On piles, wooden framed, single boarded, board and shingle roof.	16 ft. x 15 ft., 9 ft. studs.	No use..	No good

APPENDIX D.

CROSS EXAMINATION held in Sorel Government Shipyard on the 24th March 1912, by Messrs W. S. Jackson and T. H. Schwitzer.

Mr. JEAN BILODEAU. (MACHINE SHOP FOREMAN.)

Q. What is your name? A. Jean Bilodeau. Q. Since how long do you work in the yard? A. I am in the yards since 18 years. Q. Since how long are you foreman? A. Three years as foreman. Q. Where were you employed before coming into the yard? A. In the harbour of Montreal. Q. What sort of work did you do there? A. Machine work of all sorts, repairs, etc. Q. How old are you? A. 49 years. Q. What is your authority concerning the employment and discharging of men? A. I do not discharge any men. I make reports to Mr. Papineau. I have no authority. Q. Do you consider all the men employed in your department as permanent employees? A. Yes. Q. What do you do when a man comes late to work, two or three times a week. Do you report him accordingly? A. I make no report. When this happens too often, the man is suspended. Q. How many men are absent every day from your department, on an average? A. Five or six every day, on an average. Q. Do you consider that you have enough men in your department for the work you have to do? A. Yes. Q. Do you consider that you have more men in your department than you need? A. Not for the present, I have none too many. I have just the number I want. Q. How many men have you employed in your department during summer? A. From 92 to 95. Last summer I had 96. Q. On what work are those men employed during the summer? A. They are employed on repairs and on new construction. Q. How do you get a new employee when you need one? A. I ask Mr. Papineau for one. Q. Are you ever sent a new man when you have not asked for one? A. Yes, sometimes. Q. In that case, what do you do with that man? A. I give him work. Q. Do they ever send you a new man when you have no work for him? A. No. Q. Are you ever allowed to choose your own men? A. No, not all of them. Q. Do you consider all the men who are sent to you as being competent for the work of your department? A. I always choose work for them which they are able to do. Q. If they are not competent what do you do with them. A. I always give them work for which they are competent. Q. Do you fix the men's salaries yourself? A. No. Some times, because Mr. Papineau asks how much they are worth. Q. Do you report to the Director concerning the ability of a new employee before his salary is fixed? A. Yes, when Mr. Papineau sends for me and asks me what salary the man should be paid. Q. When a man comes late to work, does he report to you? A. No he does not make any report to me. If he comes at 9.30 he comes and reports to me. Q. What do you do when a man is disobedient or misbehaves? A. I make an immediate report to Mr. Papineau. Q. How can you check the time a man spends on a job? A. The time is marked on sheets. All the men's time is marked on sheets. Q. Do you place the men of your department yourself on the different kinds of work? A. Yes. Q. To whom do you report? A. Generally to Mr. Papineau, sometimes to Mr. Terreault. Q. Whom do you get your instructions from? A. Mr. Papineau and Mr. Terreault. Mr. Terreault sends us orders, but very often these come from Mr. Papineau. Q. What work have you on hand at the present time? A. We are finishing repairs to the fleet and especially repairs to the machinery on board Nos. 26 and 38. We also have machinery to make for No. 37. We have two scows to make. In fact we have lots of work. Q. How many men have you employed in your department who are not on construction work? A. I have an assistant, a man to sweep the shop, and a man to take care of the tools; in all three men.

Q. Who are these men? A. Casabon, Duplessis and Goulet. Q. Have you a clerk in your department and what is his work? A. No. I have no clerk. My assistant does all that work. Q. Who takes your place during your absence? A. My assistant, Casabon. Q. Do you punch the time-clock? A. No. Q. Do you report to the time-keeper every day, and if so how? A. Yes, I report three times a day. I have no order but I do it all the same. Q. Have you any other men in your department who do not punch the time-clock? A. No, I am the only one. Q. Do other departments or other officers interfere in what you consider the right way of managing your department? A. No, never. Q. Have you more men in your department now than you had last year at the same period? A. No, we have about the same number. Q. Have you more work ahead of you this year than last year? A. No, it is about the same thing. Q. Have you any changes to suggest in the way of managing your department through which you might obtain better work from your men without more expense to the Government? A. Yes, there should be more authority given to the foremen. A foreman should be able to discharge a man himself. He should be able to give good wages to those who deserve them and discharge the others. That is the only way to succeed. As it is now, when a man is discharged he procures outside influence. The Director is influenced by the Members of Parliament and that influence affects the foremen also. We often hear men who are discharged say: 'Never mind, I am going to see my Deputy'. There should be no political pressure on the management of the yard. A change in this would produce economy. Q Have you any complaints to make? A. I have no complaints to make personally. I have never bothered myself about other departments and apart from what I say above, everything is all right. It is my department which has always given better satisfaction. Q. Can you read and write? A. Yes. Q. Are you paid for extra work? A. No. My men are paid for working after hours. They are paid time and a half. Q. How many men have you under your control? A. Twenty-six. I have two mechanics and the rest are helpers. Q. Are the helpers paid the same wages as the mechanics? A. No. They only get full pay as helpers. Q. Are any of your men on this list considered no good? A. No, they are good according to the wages they get. Q. Is there any one that you could do without and the work go on the same? A. No, I have work for all I have. Q. What do the helpers do? A. I have a gang of them in the shop who put down the big pieces of machinery and do all the heavy work in the machine shop. I have to keep a gang there all the time. They are kept busy all the time. They put the work together and they are busy. I have nine men there. Q. Do you need them all? A. Yes, every winter the buckets are put inside the shop. My men work harder than any one else in the yard. My men are not all mechanics. They are helpers and if I were to employ all machinists this would prove more expensive. As a man gets more valuable he is given a raise of wages.

Mr. BRACONNIER (Boiler Shop Foreman).

Q. What is your name? A. M. Braconnier. Q. How long have you worked in the yard? A. 15 years. Q. Since how long are you a foreman. A. 15 years. Q. Where were you employed before coming into the yard? A. I worked for the Richelieu Company for one year. Then I worked four years on the elevators in Montreal. Q. What sort of work did you do there? A. I was second engineer on board the Richelieu boats and did repair work. Q. How old are you? A. 56 years old. Q. What is your authority concerning the employment and discharging of men? A. I have no authority at all. I can discharge men but they always come back with a letter or order from the Member of Parliament about two or three days after and I am obliged to take them back. Q. Do you consider all the men employed in your department as permanent employees? A. The good men, of old standing, are considered as permanent. The new ones are not permanent and can be discharged at any time. Q. What do you do when a man comes late to work, two

or three times a week. Do you report him accordingly? A. No, I don't report him. When it happens too often I reproach him with it, but for late coming two or three times I do not report him as long as the work does not suffer. Q. How many men are absent every day from your department on an average? A. From 20 to 25. Some times 30, but on an average between 20 and 25. Q. Do you consider that you have enough men in your department for the work you have to do? A. I have too many. I have made a report to the effect of discharging from 20 to 25. Q. How many men have you employed in your department during summer? A. On an average I have from 190 to 195. Q. On what work are those men employed during the summer? A. They work at the flanges and others putting work together and repairs. Q. How do you get a new employee when you need one? A. I have never had occasion to ask for one. My men are always sent to me before I ask for them. Q. Is a new man ever sent to you when you have not asked for one? A. Yes. Q. In that case what do you do with that man? A. I put him with the gang, and I give him work. Q. Do they ever send you a new man when you have no work for him? A. Yes. Q. Are you ever allowed to choose your own men? A. No. I do not make the choice. Q. Do you consider all the men sent to you as competent for the work of your department? A. No, they are not always competent. Q. If they are not competent, what do you do with them? A. I do the best I can with them. I consider these worth something and I make a recommendation accordingly. Complaints are made to me sometimes about the wages being too low. Q. When a man is sent to you, do you allot him to the work you think him fit for? A. Yes. Q. Do you fix the men's salary yourself? A. Sometimes. At other times, I have no knowledge of the question. Q. Do you report to the Director concerning the ability of a new employee before his salary is fixed? A. Yes, sometimes when the occasion presents itself. Q. When a man comes late to work, does he report to you? A. No. He cannot punch the clock and that is a check on him as he loses a quarter day. When he comes at 9.30, he is forced to report to me. Q. What do you do when a man disobeys or misbehaves? A. I make a report to Mr. Papineau. That man is suspended for one or two days. He returns to me and things are sometimes no better. If he continues to come late I report him again; he is suspended again and his time is lost. Q. How can you check the time he spends on a job? A. I keep no record of that. Q. Do you place the men of your department on the different kinds of work yourself? A. Yes. Q. To whom do you report? A. To Mr. Papineau. Sometimes to Mr. Terreault, when Mr. Papineau is absent. Q. Whom do you get your instructions from? A. From Mr. Papineau. Q. What work have you on hand at the present time? A. We have scows to repair, some boilers, etc. The new construction of dredges 26 and 27. Two boilers is new work. Q. How many men have you employed in your department who are not on construction work? A. I have a clerk, nine foreman. Q. Who are these men? A. Their names are on the list. Q. What are they employed at? A. The clerk checks the men's time, but he also works. The foremen see that the men are at work on jobs which I cannot see to myself.

Q. Who takes your place during your absence? A. I have never been absent one hour. Q. Do you punch the time-clock? A. No. I work enough, night and day, and I dont need to punch the clock. Q. Do you report to the time-keeper every day, and if so, how? A. I report every day, as to the men and the work going well. Q. How often do you report to the time-keeper? A. Twice a day. Q. Have you any other men in your department who do not punch the time-clock? A. No. They all punch. Q. Do other departments, or other offices, interfere in what you consider the right way of managing your department? A. No, not that I know of. Nobody interferes. Q. Have you more men in your department now then you had last year at the same period? A. Yes. Q. Have you more work ahead of you this year than

last year? A. No. We have only a dredge to finish. We are to discharge 120 men at the end of the month. At the other pay-day, we are to discharge 40 more because the work on the fleet will be finished and I shall have too many men. Q. Have you any changes to suggest in the way of managing your department, through which you might obtain better work from your men without more expense to the Government? A. Yes. The great objection is that foremen have not enough authority over the men and cannot control them as they would like. I have knowledge of men and I can tell when their salary is not sufficient, and when they come to me, I should be able to settle the question myself and not send them to Mr. Papineau. Again, I would take men when I needed them and would discharge them when they would be required no longer. If the foremén had more authority they would be better. A foreman should have full control over his men, pay according to their work, take on and discharge them as he sees fit. Q. Have you any complaints to make? A. None, except what I have stated above. Q. Can you read and write? A. No. Q. Are you in charge of boiler makers, ship platers, riveters, caulkers, drillers? A. Yes. Q. Are you in charge of men working on board the ships? A. Yes, of all men except the carpenters, joiners, etc. Q. How many under-foreman have you? A. Sometimes 7, sometimes 10 and sometimes 12. Q. Are you paid extra for working overtime? A. No. Q. Are the men paid extra for working overtime? A. Yes, the men are paid extra for working overtime. The under-foremen are also paid extra. Men and under foremen are paid time and a half. Q. Do you mast and rig the vessels? A. Yes, we put in the masts, but the rigging is done by two special men under the head-carpenter. Q. Are you responsible for putting boilers on board? A. Yes. Q. Will you rig up the new shear legs and move all heavy wenghts about the yard? A. Yes.

Mr. ALEXIS GENDRON (Yard Foreman).

Q. What is your name? A. Alexis Gendron. Q. How long have you worked in the yards? A. Since 1896, 16 years. Q. Since how long are you foreman? A. Since 1897, 15 years. Q. Where were you employed before coming into the yard? A. The Richelieu Company. Q. What sort of work did you do there? A. Carpenter's work. Q. How old are you? A. 54 years old. Q. What is your authority concerning the employment and dismissal of men? A. I have no authority whatever. Q. Do you consider all the men in your department as permanent employees? A. No, they are not all permanent. Q. What do you do when a man comes late to work, two or three times a week. Do you report him accordingly? A. I do not report him, as the time-clock controls the men's time when they are late. Q. How many men are absent every day from your department on an average? A. 7 or 8 on an average. Q. Do you consider that you have enough men in your department for the work you have to do? A. At the present time, yes. Q. Do you consider that you have more men in your department than you need? A. No, I have none too many. Q. How many men have you employed in your department during the summer? A. From 125 to 130 on an average. Some summers we have more than that. Q. On what work are those men employed during summer? A. Unloading material, iron, wood coming on the cars, then construction, handling of heavy pieces, &c. Q. How do you get a new employee when you want one? A. I ask Mr. Papineau for one. Q. Is a new man ever sent to you when you have not asked for one? A. Yes. Q. In that case what do you do with the man? A. I put him at work on a job which I think he is fit for. Q. Do they ever send you a new man when you have no need for him? A. I always have work for those they send me. Q. Are you ever allowed to choose your own men? A. No, not all. Q. Do you consider all the men sent to you as being competent for your work? A. No, they are not all competent. Q. If they are not competent, what do you do with them? A. I make a report to the Director. Q. When a man is sent to you, do you allot him to the work you think him fit for? A. I give him a trial, then I put him

at the work he can do. Q. Do you fix the man's salary yourself? A. No, I do not. Q. Do you report to the Director concerning the ability of a new employee before his salary is fixed? A. Not always. I make a report when I am asked to. When a salary is a little higher than others it is because I have recommended it. Q. When a man comes late to work, does he report to you? A. Sometimes they come and tell me it is too late for them to work. Q. What do you do when a man disobeys or misbehaves? A. I make a report to the Office. Q. How can you check the time a man takes to do a job? A. No record is kept of that; we use our own judgment to calculate the time taken. Q. Do you put the men of your department on the different kinds of work yourself? A. Yes, I do. Q. To whom do you report? A. To the Director or to the Assistant Director. Q. Whom do you get your instructions from? A. Generally from the Assistant Director. Q. What work have you on hand at the present time? A. We have the dredge No. 8, new piping for the pumps. Repairs to the *Terrebonne;* then the construction of No. 38; the putting in shape of things for the getting out of boats in the Spring. Q. How many men have you employed in your Department who are not on construction work? A. I have a clerk and 10 sub-foremen. Q. Who are these men—what are they employed at? A. The sub-foremen keep the men's time and the clerk transfers them to the office. They do other work besides, seeing that the men work. Q. Who takes your place during your absence? A. I have been replaced twice by my first sub-foreman, Mr. Cornoyer, eight days in all. Q. Do you punch the time-clock? A. No. Q. Do you report to the timekeeper every day, and if so, how? A. The clerk makes report to the timekeeper. The timekeeper sees me every day and I have no report to make to him personally. Q. How often do you report to the timekeeper. A. Report is made every day by the clerk and sub-foreman. Q. Have you any other men in your department who do not punch the time-clock. A. No, they all punch the clock. Q. Do other departments, or other officers interfere in what you consider the right way of managing your department? A. No, nobody interferes. Q. Have you more men in your department now than you had last year at the same period? A. I have about the same number. Q. Have you more work ahead of you this year than last year? A. No. Q. Have you any changes to suggest in the way of managing your department, through which you might obtain better work from your men, without more expense to the Government? A. If we had more authority over the men, things would be better. The men now are put in by the Members of the House, and this is unfortunate for the yard. The men are independent and we lack authority over them. Q. Have you any complaints to make? A. No, except what I have said just now. Q. Can you read and write? A. Yes. Q. Are you paid extra for additional time put in? A. No, I am not paid extra. The men and sub-foremen are paid extra but not me. Q. Can you discharge any men? A. No. Q. Have you any men whom you consider as of no use to you, whom you would like to see discharged? A. No, I need all the men I have.

Mr. SIMEON CHATEAUVERT (Blacksmith Shop Foreman).

Q. What is your name? A. Siméon Chateauvert. Q. How long have you worked in the Yard? A. Since 1875, but I was away five years. Q. Since when are you foreman. A. I am foreman since five years. Q. Where were you employed before coming into the Yard? A. I was employed with Messrs. Beauchemin at Sorel. Q. What sort of work did you do there? A. I worked on the boats, in the mills, blacksmith work, at work of my trade. Q. How old are you?. A. 63 years old. Q. What is your authority concerning the employment or dismissal of men?. A. I have not the authority I should have. Q. Do you consider all the men employed in your department as permanent employees?. A. Yes, they may be considered permanently employed. Q. What do you do when a man comes late to work two or three times a week. Do you report him accordingly? A. I make no report. The

time clock is there for that purpose. Q. How many men are absent every day from your department on an average? A. Sometimes one or two, but as a rule everyone is there. Q. Do you consider that you have enough men in your Department for the work you have to do? A. I have enough now, but in a short time I shall have too many. Q. Do you consider that you have more men in your Department than you need? A. Not now. We might dismiss a few, but the rest of them would have to work harder and be paid higher wages, although they do good work now. Q. How many have you employed in your Department during summer? A. About the same number as now. Q. On what work are those men employed during summer?. A. On ship repairs and on new construction work. Q. How do you get a new employee when you need one? A. I ask the Director for one. Q. Is a new man ever sent you when you have not asked for him? A. No. We get exactly the number we require. Q. Do they ever send you a new man when you have no work for him? A. No. Q. Are you ever allowed to choose your own men? A. I recommend my men and they are chosen. Q. Do you consider all the men sent to you as competent for the work of your department? A. Yes, I think they are all competent for their work. Q. When a man is sent to you, do you allot him to the work you think him fit for? A. Yes. When I recommend a man I know what work he can do, and I put him at it. Q. Do you fix the man's wages yourself? A. No. The salaries are fixed at the Office, but when an employee takes the place of another one he gets the same salary as that other one did. Q. Do you report to the Director concerning the ability of a new employee before his salary is fixed? A. Yes. Q. When a man comes late to work, does he report to you? A. No, because he cannot start to work, he cannot come in. Q. What do you do when a man disobeys you or misbehaves? A. I report and make a complaint, but this does not often happen. Q. How can you check the time a man spends on a job? A. We do not keep a record, but my experience teaches me whether the time spent on a job is reasonable or not. I always see that a job is finished within a reasonable time. Q. Do you put the men of your Department on the different kinds of work yourself? A. Yes. Q. To whom do you report? A. To the Director, Mr. Papineau. Q. Whom do you get your instructions from? A. From Mr. Papineau. Q. What work have you on hand at the present time? A. Repairs to ships, dredges, tugs. General repairs. Q. How many men have you employed in your Department who are not on construction work? A. I have a clerk. Q. Have you a clerk in your Department, and what is his work? A. Yes. He checks and keeps the men's time. He makes reports, receives orders and transmits them. He makes the requisitions for the stock wanted, and keeps the time in connection with the work. Q. Who takes your place during your absence? A. My first blacksmith. Q. Do you punch the time-clock? A. No. Q. Do you report to the timekeeper every day, and if so, how? A. I give my report to the timekeeper about the men's time on work. Every morning that time-sheet goes to the timekeeper. Q. How often do you report to the timekeeper? A. Once a day. Q. Have you any other men in your Department who do not punch the time-clock? A. No, they all punch. Q. Do other departments, or other officers, interfere with what you consider the right way of managing your Department? A. No. Nobody ever interferes with me. Q. Have you more men in your Department now than you had last year at the same period? A. Only two more, a blacksmith and a helper. Q. Have you more work ahead of you this year than last year? A. No, not as much. Q. Have you any changes to suggest by which you might obtain better work from your men, without more expense to the government? A. I do not see what could be changed. For the work we do there is not much to be changed. We should have the power though of giving the men the wages they are worth. Q. Have you any complaints to make? A. No, I have no complaint to make. Q. Can you read and write? A. Yes, a little. Q. Are you paid for extra work done by you? A. No, I am not paid extra. The men are paid for extra work. They are paid at the rate of time and a half. They very seldom do extra work. Q. What is the weight of your steam hammers? A. The big one strikes about 15 tons, the others

about 6 tons. Q. Do you get any blacksmith work bought in? A. No, we buy no material for the blacksmith? Q. Do you do horse shoeing? A. We do all sorts of blacksmith work. Q. Do you make Engine forgings, connecting rods and small forgings, etc.? A. Yes, forgings for winches, engines, &c., anchor cranes, rail stanchions, boat davits, etc. Q. Does the Director ever ask you if you have room for more men? A. No. Q. Have you good control over your men? A. Yes, all the control I want. Q. Are all forgings made for new construction weighed by you and a record sent to the office of finished weights? A. Yes, as soon as a piece is finished, it is weighed, the weight entered on a sheet and the sheet forwarded to the Office. Q. Do you speak English? A. No.

Mr. N. BADEAU (Foreman of Carpenters—Mould Loft No. 2.)

Q. What is your name? A. Napoleon Badeau. Q. How long have you worked in the Yard? A. I have worked for 45 years, but have been absent for two years. Q. How long have you been foreman? A. I was engaged as constructor in 1892. Before that I was sub-foreman. Q. Where were you employed before coming into the Yard? A. I have always been employed here. Q. How old are you? A. 61 years old. Q. What authority have you concerning the employment and dismissal of men? A. If a man does not suit me I report to Mr. Papineau. I have no direct authority. Q. Do you consider all the men employed in your Department as permanent employees? A. No. As soon as work gets scarce we discharge some. Q. What do you do when a man comes late to work two or three times a week. Do you report him accordingly? A. This is effected through the time-clock. We cannot see to that ourselves. If the men miss work they lose their time and pay. Q. How many men are absent every day from your Department on an average? A. Very few. On an average two or three a day out of 108 men we have. Q. Do you consider you have enough men in your department for the work you have to do? A. Yes. I have just the number I want now. Q. Do you consider that you have more men in your department than you need? A. No, I have exactly the number I require. Q. How many men have you employed in your department during summer? A. Sometimes we have as many as 250 during summer, but for some years back the work has been subdivided and now we have about the same number as in winter. Q. On what work are these men employed during summer? A. They work on repairs generally and new construction work. Q. How do you get a new employee when you need one? A. I refer to Mr. Papineau. Q. Is a new man ever sent to you when you have not asked for one? A. Yes. Q. In that case what do you do with that man? A. I put him at work with the others and get the best possible out of him. Q. Do they ever send you a new man when you have no work for him? A. There is always work to do and I never have any trouble on that score. Q. Are you ever allowed to choose your own men? A. Never, unfortunately. Sometimes I will say: 'there is a man who would suit me', and he is sent to me, but oftener men are sent to me without my recommending them. Q. Do you consider all the men sent to you as being competent for the work of your department? A. It often happens that the men sent to me are not competent. Q. If they are not competent what do you do with them? A. I have to put up with them. I sometimes have to neglect my own work to show them what to do, and this is a cause for trouble. Q. When a man is sent to you, do you allot him to the work you think him fit for? A. As a rule I place them where I judge best. Q. Do you fix the man's wages yourself? A. No, and that is very unfortunate. Q. Do you report to the Director concerning the ability of a new man before his salary is fixed? A. The wages are fixed without my being consulted. Sometimes I am asked if so and so is a good man. Q. When a man comes late to work, does he report to you? A. If a man comes late, he goes back. The time-clock is closed; he does not work and is not paid. If he arrives at 9.30 he goes and punches the

clock and then reports to me. Q. What do you do when a man disobeys you or misbehaves? A. It happens sometimes that a man does not obey orders. I then send him away telling him to come back when he is disposed to work. There is no direct disobeying, but rather misconduct. I then report to the Director who tells me to send the man away and take his time card from him. Q. How can you check and record the time a man spends on a job? A. I am supposed to watch the men two or three times a day and I make a guess at the time spent. The job-number is a guide, because we know that a job should cost so much and that it should take so much time to do it. We base the time needed on the job-numbers. I have sub-foremen all the time with the men and they keep an eye on their work. Do you place the men of your department on the different kinds of work yourself? A. Yes. Q. To whom do you report? A. To Mr. Papineau. Q. Whom do you get your instructions from? A. As a rule from Terreault, the assistant director. Sometimes from Mr. Papineau. Q. What work have you on hand at the present time? A. The construction of four scows of 200 yards capacity; the joiner work for dredges No. 36 and No. 38; the construction of a rock-crusher and two tugs. Q. How many men have you employed in your department who are not on regular construction work? A. I have five sub-foremen. Q. Who are these men? A. N. Cornoyer, Pierre Peloquin, N. Thibault, N. Martineau and Narcisse Peloquin. Q. What are they employed at? A. They superintend the men's work and see that they perform their duties according to given orders. Q. Have you a clerk in your department, and what is his work? A. Of late I have a young clerk. He makes the requisitions for the wood required. He keeps the men's time and the place where they work. He does not make requisitions without my orders. I sign all the orders. Q. Who takes your place during your absence? A. I am never absent. My assistant could represent me. Q. Do you punch the time-clock? A. No, I never punch it. Q. Do you report to the timekeeper every day, and if so how? A. The timekeeper sees me every day and I do not have to report to him. He is one of my men and I see him three or four times every day. Q. Have you any other men in your department who do not punch the time-clock? A. No. I would not stand that. Q. Do other departments, or other officers interfere in what you consider the right way of managing your department? A. No, nobody interferes with me. Q. Have you more men in your department now than you had last year at the same period? A. I have about the same number. We have taken new men on but they were to replace others who had gone. Q. Have you more work ahead of you this year than last year? A. No. If nothing happens, we will soon have less work than last year. Q. Have you any changes to suggest in the way of managing your department through which you might get better work from your men without more expense to the Government? A. I wrote to the Minister in 1910 a letter giving him all the details needed on that subject. In my opinion the Director should put more confidence in his foremen. They have no authority and no control over the men. Q. Have you any complaints to make? A. Well, we have no control, with the result that the men are more or less nonchalant. The Director has no confidence in us. We have no control over the men and nobody is responsible in the yard. Q. Can you read and write? A. Yes. Q. Are you paid extra for additional work? A. No, I am not paid. The men who work overtime are paid about time and a quarter. Q. Are you responsible for laying the keel, making and preparing ribbing, shoring and keeping fair the vessels while building? A. Yes, I am responsible for all that. Q. Are you responsible for launching the boats and for placing the dredges? A. Yes. Q. Do you have any control over the buying of wood? A. No. Q. Are you responsible for moulding loft work.? A. Yes. I have an assistant loft-man with me. One of the lofts is not necessary. There are two lofts, but one would be sufficient. Q. Do you build small boats? A. Yes. Q. What kind of wood do you use for templates? A. Common pine. Q. Where do you get it from? A. We get it from Montreal. Q. How many men do you control approximately? A. About 107. Q. Do you supervise all the new construction wood-work personally? A. Yes. I supervise the

launching as well. Q. Have you any men whom you consider had better be discharged? A. Yes, two or three men could be well dismissed. There are some old employees, of 30 or 35 years service, who could be dismissed, but they are kept on through consideration of their long services. There are four of them.

Mr. E. F. LACHAPTLLE (Sawmill Foreman).

Q. What is your name? A. E. F. Lachapelle. Q. How long have you worked in the yard? A. Since August, 1906. Q. How long have you been foreman? A. Since July, 1911. Q. Where were you employed before coming into the yard? A. I was at St. Ours on sawmill construction. Q. What sort of work did you do there? A. I was proprietor of a sawmill. Q. How old are you? A. 37 years old. Q. What authority have you concerning the employment or dismissal of men? A. I have no authority whatever for employing or dismissing men. I have to refer to the Director for that. Q. Do you consider all the men employed in your department as permanent employees? A. No, not one is permanent. As long as there is work and they do well they are kept on. Q. What do you do when a man comes late to work two or three times a week? Do you report him accordingly? A. I give him notice once, and if it occurs again I report to the Director. Q. How many men are absent every day from your department on an average? A. Three or four on an average every day. Q. Do you consider that you have enough men in your department for the work you have to do? A. Yes. Q. Do you consider that you have more men than you need? A. Well, this varies. Sometimes we have more than we need. At the present time we have about just what we want. Q. How many men have you employed in your department during summer A. About 20, that is since I am foreman. Q. On what work are these men employed during the summer? A. The same work as during the winter. The carting and preparing of the lumber. The piling of the lumber, the putting it in the dry kiln, and putting it safely in the sheds. Q. How do you get a new employee when you need one? A. I go and ask the Director. Q. Is a new man ever sent to you when you have not asked for one? A. No. This has never happened in my case. Q. Do they ever send you a new man when you have no work for him? A. No, never. Q. Are you ever allowed to choose your own men? A. Yes. I choose them myself. Sometimes a man is suggested by the Member for the House or by a person having influence, to the effect that that man is able to do the work, and if I consider that the said man is as able as stated I recommend him to the Director. Q. Do you consider all the men sent to you as being competent for the work of your department? A. Not always Q. If they are not competent, what do you do with them? A. We are obliged to take them on and put them at work. Among the new ones there are willing men but they are not all capable. Q. Do you fix the men's wages yourself? A. I send them to Mr. Papineau with the recommendation that they be given a certain salary. Q. Do you report to the director concerning the ability of a new employee before his salary is fixed? A. Yes. Q. When a man comes late to work, does he report to you? A. No. He cannot come late without losing his pay. He loses a a quarter of a day. I do not report to the Director except if the work is in a hurry and I make representations to the man himself. Q. What do you do when a man disobeys you or misbehaves? A. I report him to the Director at once. Q. How can you check and keep record of the time a man spends on a job? A. I have never had any complaint about the delay in my work. The preparation of the wood is always quickly done and I have no complaint to make on that subject. Since I am foreman I always give notice to the men that the work I put them at is pressing and that they must hurry up. Q. Do you place the men of your department on the different kinds of work yourself? A. Yes. Q. To whom do you report? A. To the Director. Sometimes the watchmen are given notice to have to look at this and that thing. Those

watchmen must report to the Director himself if they have trouble with the men. Q. Whom do you get your instructions from? A. From the Director and the assistant director. I receive orders for the preparation of my work from the construction foreman, Mr. Badeau. Q. What work have you on hand at present time? A. I have flooring to get kiln dried, also ship fenders to prepare for Nos. 36 and 37. Also for the construction of No. 42, that is to say two scows. Also ordinary repairs, etc., provision boxes, tool handles. I have also two men sharpening saws, band saws, etc., and other tools. Q. How many men have you in your department who are not employed on construction work? A. I have two clerks. One for the mill. The requisitions are made by myself, the clerk takes the quantity of wood which comes up to be sawn, measures it and figures the product when it comes out of the saw. The other clerk is in the office and checks the lumber which comes out. I countersign the requisitions and send them back to him. Q. Who takes your place during your absence? A. Mr. Angers, my assistant, who has all the knowledge necessary to take my place. Q. Do you punch the time-clock? A. No. Q. Do you report to the timekeeper every day, and if so, how? A. No. I am not asked to make any report. Q. Have you any other men in your department who do not punch the time-clock? A. No, they all punch. Q. Do other departments, or other officers, interfere in what you consider the right way of managing your department? A. No. Nobody ever interferes. Q. Have you more men in your department now than you had last year at the same period? A. I was not foreman at the same period last year. I believe though that the number of men was about the same as now. Q. Have you more work ahead of you this year than last year? A. No, we have less work than last year. Q. Have you any changes to suggest in the way of managing your department through which you might get better work from your men without more expense to the government? A. When I was given absolute control I made quite a few improvements. Still, things might be better if the Director had more authority and freedom of action. I believe that the Members of the House and those who represent them bring pressure to bear upon the Director. For instance, a man is reported to Mr. Papineau, who discharges him, and that man is taken back again in a couple of days by the influence of the Member, and so on. Q. Have you any complaints to make? A. The only thing that could be improved would be that the yard be absolutely managed as if it was a private company and not under the control of a government or a political party. Q. Can you read and write? A. Yes. Q. Are you paid extra for additional hours of work? A. No, I am never paid for extra work. My men very seldom do any extra work; in fact I may say they hardly do any, although I believe that my department turns out more work than any other. A tally is kept of all the wood, square or round, which is cut up for dimension timber. All the other lumber, slabs, etc., is kept in stock and an account is kept in the office.

MR. J. A. PAYETTE. (PAINT SHOP FOREMAN).

Q. What is your name? A. J. A. Payette. Q. How long have you worked in the Yard? A. Three months, since January. Q. How long have you been foreman? A. Three months. Q. Where were you employed before coming into the yard? A. I was contractor in Sorel. I had a shop. Q. How old are you? A. 32 years old. Q. What authority have you concerning the employment and dismissal of men? A. I have no authority whatever. When a man does not suit I report him to Mr. Papineau. Q. Do you consider all the men in your department as permanent employees? A. Not all, but, of course, being here only for three months I could not tell for a certainty. Q. What do you do when a man comes late to work, two or three times a week. Do you report him accordingly? A. Yes, I report him to the Director. Q. How many men are absent every day from your department on an average? A. Three or four on an average. Q. Do you consider that you have enough men in your department for the work you have to do? A. Yes. Q. Do you consider that you have more men in your

department than you need? A. No. I have just enough. Q. How many men have you employed in your department during summer? A. I cannot say. Q. How do you get a new employee when you need one? A. I have not had occasion to see that yet. The men come to me and I send them to the Director. Q. Is a new man ever sent to you when you have not asked for one? A. This has not happened yet. Q. Do they ever send you a new man when you have no work for him? A. This has not happened yet. Q. Are you ever allowed to choose your own men? A. I have not had occasion yet, but I think I would choose them myself. Q. Do you consider all the men sent to you as competent for the work of your department? A. Not all. Three fourths of them are good for rough work. Q. If they are not competent what do you do with them? A. I put them at work which they are able to do. We have all kinds of work. Q. When a man is sent to you, do you allot him to the work you think him fit for? A. It is myself personally who puts him to work according to his ability. Q. Do you fix the men's wages yourself? A. No. Q. Do you report to the Director concerning the ability of a new man before his salary is fixed? A. Yes, I report to the Director who fixes the salary. Q. When a man comes late to work, does he report to you? A. I cannot say. I have no report to make. The man loses his pay. Q. What do you do when a man disobeys you or misbehaves? A. I report him to the Director. Q. How can you check and keep record of the time a man spends on a job? A. I take note of his time according to my own judgment. I do not keep any record. Q. Do you place the men in your department in the different kinds of work yourself? A. Yes. Q. To whom do you report? A. To the Director. Q. Whom do you get your instructions from? A. The Director. Q. What work have you on hand at the present time? A. Painting of all the ships, dredges, etc., of the fleet. Q. How many men have you employed in your department who are not on construction work? A. I have none. Q. Have you a clerk in your department and what is his work? A. No, I have no clerk, I keep the men's time myself. Q. Who takes your place during your absence? A. I have never yet been absent. My assistant could replace me. Q. Do you punch the time-clock? A. No. Q. Do you report to the timekeeper every day, and if so, how? A. No, I am always here before seven o'clock to set the men at work and leave at 5.30. I do not need to make any report, at least I have no orders to that effect. Q. Have you any other men in your department who do not punch the time-clock? A. No, they all punch the clock. Q. Do other departments, or other officers, interfere in what you consider the right way of managing your department? A. No, I am never interfered with. Q. Have you more men in your department now than you had last year at the same period? A. No, last year they had 98, now we only have 57. Q. Have you any more work ahead of you this year than last? A. It is just about the same. Q. Have you any changes to suggest in the way of managing your department through which you might obtain better work from your men without more expense to the government? A. I would like to have full control of my men. As it is now if a man without any ability is sent to me, I am forced to give him a salary which he does not earn. Often an able man would like to be paid adequate wages and cannot succeed. So far, I see no way of improving this state of things. Q. Have you any complaints to make? A. The quality of paints is poor. I have made complaints to the Director, but without any results. I am forced to accept what is given me, in the line of white lead, ochre, etc. Q. Can you read and write? A. Yes. Are you paid extra for overtime work? A. No, I am not paid extra. The men are paid time and a half for extra work. Q. Have you any men whom you consider you would be better without? A. No. I have no men to discharge. There are men who are paid too dear. Some time ago some fifty painters were discharged and about half of them were taken back. The reason for this was that the winter work was all finished. Q. Do you mix all paints here? A. Yes. Q. Do you keep track of amount of paint used on each job? A. All the paint used on a job is weighed and charged to that job? A. Do you do all the glazing? A. Yes. Q. Are all your men first-class painters? A. The three-fourths of the men go as first-class painters. Q. Have you any wood finishers, who can do French polishing and fuming? A. Yes, I have three of these men.

MR. F. A. COTE (CHIEF ELECTRICIAN).

Q. What is your name? A. Francis A. Coté. Q. How long have you been working in the yard? A. 10 years. Q. How long have you been Chief Electrician? A. I always held the position of Chief Electrician. Q. Where were you employed before coming into the yard? A. I was seventeen years with the Bell Telephone Co. with headquarters in Montreal. I was with Messrs Ahearn & Soper in connection with the Ottawa Street Ry. Co. for three years and after that I was in business for myself in Ottawa in the electric contracting business. It was while on that business in Ottawa that I accepted this position. I may say that my duties here since the last seven months are quite restrained. My position here first was connected with the territory all over Canada. I was sent to Halifax, St. John, N.B., Prescott, Ottawa and other places in connection with all electrical work connected with the Department of Marine & Fisheries. Since Mr. Gourdeau, the late Deputy Minister, retired from the service, it looks as though Mr. Johnson, who replaces him does not approve of my position having that scope, and the result is that I am not consulted any more regarding work ouside of Sorel. Q. How old are you? A. 45. Q. What authority have you concerning the employment and dismissal of men? A. I think my authority is very limited. I could not discharge or take on a man. Q. Do you consider all the men employed in your department as permanent employees? A. Well I never looked at that question in that light. My experience has been that with a few men that I have when any attempts have been made to get rid of some of them we have been met with such trouble that we did not dare doing it. Q. What do you do when a man comes late to work two or three times a week? Do you report him accordingly? A. There is such a thing as a man coming late. I have had no cause to find fault with any of the men for the reason that none of them have lost time, but I have officers, two or three superior men, who have to my knowledge lost ten quarter days the last year through coming late but who put in the time. This is wrong. There should be a rule so that a man losing five minutes should not incur the loss of a quarter day. Two men have lost six quarter days and another four during the last month. Q. How many men are absent every day from your department on an average? A. I can put it at one. Q. Do you consider that you have enough men in your department for the work you have to do? A. At certain times of the year I have enough, but at other times I have too many. For instance, there is one elevator dredge that is under construction, and I presume that this will keep us busy until the fleet starts out, that is to say my men will be kept going for a couple of months, but after that new construction work is finished I will have too many men. I have not too many men if we get work as heretofore, but from what I can see now, I am pretty sure that during the next season I will have a few men too many. Q. Do you consider that you have more men in your department than you need? A. No. We are overhauling every boat, dredge and tug. Apart from that we are also overhauling the engines in our mechanical department. My assistant is giving all his time to this and at present we have our hands full. Q. How many men have you employed in your department during the summer? A. The same number as now, that is to say 13. Q. On what work are those men employed during the summer? A. In summer we have tugs and dredges to finish, but it is beginning to appear as if we would not have this work this summer. We have been kept busy with the installation of small isolated plants on small tugs, etc. Q. How do you get a new employee when you need one? A. I have not appointed a man for five years. I apply to the Director and tell him I would like to have an extra hand, and the Director complies. But it is not the most competent man that gets the job. Q. Is a new man ever sent to you when you have not asked for one? A. No. Q. Do they ever send you a new man when you have no work for him? A. No. Q. Are you ever allowed to choose your own men? A. No. Q. Do you consider all the men sent to you as competent for the work of your department? A. Not by any means. The one that has the biggest pull, gets the job. Q. If they are not competent, what do you

do with them? A. I do the best I can. Q. When a man is sent to you, do you allot him to the work you think him fit for? A. Yes. Q. Do you fix the men's wages yourself? A. I had that difficulty and it lead to quarrelling. Once Mr. Desbarats put me out of his office over that question because I was fighting for a man who deserved an increase of salary. I did not get much satisfaction. Q. Do you report to the Director concerning a new employee before his salary is fixed? A. Yes. Q. When a man comes late to work, does he report to you? A. Yes, on my command they do it. Five or six years ago I threatened men for giving lip when coming late. Since that they are very careful and will give me good excuses. Q. What do you do when a man disobeys you or misbehaves? A. I report him to the Director. Q. Do you keep record of the time a man spends on a job? A. Yes, this is done every morning. Q. Do you place the men of your department on the different kinds of work yourself? A. Yes, I do in the bigger lines, but the minor details are left to my foreman. For instance, the other night we had a short circuit, we had a ground and wanted to take it out, I told DeGrosbois, my assistant, to come back that night early and take whom he liked with him. He came back and the work was done. There are times when I am called away for a month and things go on very well. This man does as well as myself. Q. To whom do you report? A. To the Director. Q. What work have you on hand at the present time? A. The dredge No. 26 and that stone crusher. The best part of my men are busy finishing the fleet. Q. How many men have you employed in your department who are not on construction work? A. One. Q. Who is that man? A. Mr. Thibeaudeau. Q. What is he employed at? A. He keeps the cupboards locked up, keeps tallies, answers the telephone and also hands out the lamps. For instance, we get requisitions from different departments in connection with lamps. The men from these departments do not come to the store here. They give us the requisitions and we immediately give them the lamps, thus saving time. We send no requisitions to the office. Q. Have you a clerk in your department, and what is his work? A. I have no clerk. Q. Who takes your place during your absence? A. Mr. DeGrosbois. Q. Do you punch the time-clock? A. No. I sign the book. Q. Do you report to the timekeeper every day, and if so, how? A. No. Q. Have you any other men in your department wo do not punch the time-clock—If so, how is their time checked—How often do you report to the timekeeper? A. No. Q. Do other departments or other officers interfere in what you consider the right way of managing your department? A. Not lately. It happened three or four years ago. People would come for a cut-off conduit, the result was I worked up for one single month an expense of $78. Q. Have you any more men in your department now than you had last year at the same period? A. I have much less. I used to have 18 men, now I have 13. Q. Have you more work ahead of you this year than last year? A. I have not less. Q. Have you any changes to suggest in the way of managing your department through which you might obtain better work from your men without more expense to the Government? A. Yes, pay my men better and dismiss a few. I would get the same work and the Government would pay less money. Q. Have you any complaints to make? A. No, except what I said above. Q. Are you paid extra for extra work? A. No. My men are paid extra. Q. Have you any men that you would recommend for dismissal in your department for incompetency? A. I do not think so. Q. Are you acquainted with the N.E. Underwriters Code? A. Yes, a little. Q. What are your working hours? A. From half past eight in the morning till five. Q. Do you figure out the size of all dynamos for the fleet? A. Yes. Q. Have you a man trimming lights? A. Yes, not only that; he trims lights and puts in extension cords, etc. Q. Have you the proper authority over men? A. Yes. I may say I have, but this must go under restriction. I may instance that I had two men doing extra work as ordered by me. I met these two men and asked them what they were doing standing and talking that way. They answered that they were talking about their own business. I reported to Mr. Papineau and asked him what to do. I told

him that I wanted to suspend them. Mr. Papineau looked provoked but just as I was leaving the office Mr. Papineau said to me 'Mind that you do not put your foot in it.' That was the end of the matter. Q. Do you give out lamps without returning in old lamps or plugs? A. Yes. I give orders first not to give out lamps without the stub, but we find that it is better to give them at once in order that the work may not suffer.

Mr. L. COFSKY (FOREMAN OF MOULD LOFT NO. 1.)

Q. What is your name? A. Louis Cofsky. Q. How long have you worked in the Yard? A. 18 years. Q. How long have you been foreman? A. I have always been foreman here. Q. Where were you employed before you came into the Yard? A. I have worked 10 years for William Boivin, Contractor Morency, and 7 years for the Richelieu Company, in joiner work. Q. How old are you? A. 53 years old. Q. What authority have you concerning the employment or dismissal of men? A. I have no authority. That is with the Office. Q. Do you consider all the men in your department as permanent employees? A. Yes, they are all permanent men. Some have been here 6 or 7 years, others 13 years. Q. What do you do when a man comes late to work two or three times a week. Do you report him accordingly? A. I make no report. They cannot come late without losing their pay. Q. How many men are absent every day from your department on an average? A. Two or three a week on an average. Q. Do you consider that you have enough men in your department for the work you have to do? A. Yes, I have a sufficient number. Q. Do you consider that you have more men than you need? A. If some work does not come in I consider that I will soon have too many. Q. How many men have you employed in your department during summer? A. 12 or 13. Q. On what work are those men employed during summer? A. Only on the modelling board. Q. How do you get a new employee when you need one? A. I get them from the Director's office. Q. Is a new man sent to you when you have not asked for one? A. Yes. Q. In that case, what do you do with that man? A. I put him to work. Q. Do they ever send you a new man when you have no work for him? A. No, never when I have no work for a man. Q. Are you ever allowed to choose your own men? A. I do not choose them myself. When an incompetent man is sent to me I take him on and show him how to work. Q. Do you consider all the men sent to you as being competent for the work of your department? A. Sufficiently competent for the work of making models which they have to do. Q. When a new man is sent to you, do you allot him to the work you think him fit for? A. Yes, I place them on the right work myself. Q. Do you fix the men's wages yourself? A. No, I do not. That is the office's work. Q. Do you report to the Director regarding the ability of a new man before his salary is fixed? A. Yes, I report to the Director who fixes the wages. Q. When a man comes late to work, do you report him accordingly? A. A man cannot come late because he loses his pay. He can punch at 9.30 but he loses his pay for the time lost. Q. What do you do when a man disobeys you or misbehaves? A. If a man disobeys and refuses work I get the best of him or I send him away. I have never had occasion to send any away for that reason. Q. How can you check the time a man takes for a job, and keep record of it? A. That is very difficult. If a man is delayed in his work on account of the preparation of the wood, etc., it is hard to keep tally of the time spent on his work in particular. I change the men as the different work or jobs require. I put two men here and two men there, and so on. Q. Do you put the men on the different jobs yourself? A. Yes. Q. To whom do you report? A. I have no report to make because, as a rule, everything goes well. I am not asked to report. Q. Whom do you receive your instructions from? A. From Mr. Terreault. Q. What work have you on hand at the present time? A. Different repair jobs to Nos. 26 and 37, and other minor repairs. I have men on board the *Tarte* and on board the No. 6, doing repair work, etc. Q. How many men have you in your department who are not employed on construction work? A. All my men are employed on construction work.

Q. Have you a clerk in your department, and what is his work? A. Yes. He makes out requisitions. He keeps the men's time, etc. Q. Who takes your place when you are absent? A. Albert Deserre. He is 30 years old. He is well able to replace me, although this very seldom happens. Q. Do you punch the clock? A. No. Q. Do you report to the timekeeper every day, and if so, how? A. The report which the clerk makes of the requisitions every day, of the men's time, etc., is the only report that I make. Q. How often do you report to the timekeeper? A. Every day. Q. Have you other men in your department who do not punch the time-clock? A. All the men punch the time-clock. Q. Do other departments, or other officers interfere in what you consider the proper way of managing your department? A. No. I would not stand for it anyway. Q. Have you more men in your department now than you had last year at the same period? A. I have the same number about. Q. Have you more work ahead of you this year than last year? A. Yes. I have more work. Q. Have you any changes to suggest in the managing of your department, through which you might get better work from your men without any more expense to the government? A. If my men were more capable in tracing their work instead of having to make moulds, they could do more work. Only a good boilermaker would be more expensive and the resulting improvement would not be very great. Q. Have you any complaints to make? A. No. Q. Can you read and write? A. Yes. Q. Are you paid extra for overtime? A. No. My men never do overtime. Q. Have you any men whom you would like to see dismissed, for incompetency, etc.? A. If we had no new construction work we could do without half of our men in a month's time. Q. What are two moulding lofts wanted for? A. One only is absolutely required, but when two tugs come in at once, the work has to be pushed forward. Q. Do you lay down all boats to be constructed on the floor? A. Mr. Badeau does the tracing which is then transferred to the old loft where the work is continued. Q. Do you make templates for every frame and floor in fine ended boats? A. Yes. Q. Do you make templates for shell plating? A. All templates are made in loft except for shells. The conditions in the old loft are not good, the floors are poor and we prefer using the new loft, where conditions are better. We use screw nails and wrought nails half and half in making templates, and when finished the nails are clinched or turned. We have no machinery to assist in making templates. We have low stools in the lofts for making templates.

MR. H. LEGAULT (ASBESTOS FOREMAN).

Q. What is your name? A. A. H. Legault. Q. How long have you been working in the yard? A. Three years. Q. How long have you been foreman? A. Since I am here, three years. Q. Where were you employed before coming into the yard? A. I was employed for the Richelieu Company and for Mr. Wurtele at Ottawa. Q. What sort of work did you do there? A. I worked in asbestos. I never did anything else. Q. How old are you? A. 48 years of age. Q. What authority have you concerning the employment and the dismissal of men? A. I have no authority. I make a report when I want men discharged. Q. Do you consider that all the men in your department are permanent employees? A. Yes. They were here when I came and they are still here. Q. What do you do when a man comes late to work two or three times a week, do you make a report accordingly? A. They cannot come late without losing one quarter day. If they miss the time clock, they miss their pay. Q. How many men are absent every day from your department on an average? A. It is very seldom that any one is missing. Sometimes a man will be absent on account of bad roads, etc., but that is very seldom. Q. Do you consider that you have enough men in your department for the work you have to do? I have enough now, but later on, say towards the end of next week, when the work will be pressing, I will want more men. At certain times, I borrow men from other parts of the yard. Q. How many men have you employed in your department during summer? A. I have six men. Last summer, I had eight for a time. Q. On what work are those men em-

ployed during summer? A. On repairs and preparing stock for the following year. Then getting the cement at the bottom of the boats, etc. Q. How do you get a new employee when you require one? A. I ask the Director for one. Q. Do they ever send you a new man when you have not asked for one? A. No, but I was sent one once who was a mason. That was the only time. They knew I was short of men, and they sent him to me. Q. In that case what do you do with the man? A. I put him to work. As I say above, this happened only once. Q. Do they ever send you a new man when you have no work for him? A. No, never. Q. Are you ever allowed to choose your men yourself? A. There is no choice to make, all my men are labourers. Q. Do you consider all the men sent to you as being competent for the work of your department? A. Yes. Q. When a new man is sent to you, can you put him to the work which you think him fit for? A. Yes. Q. Do you fix the men's wages yourself? A. No. Q. Do you report to the Director concerning the ability of a new man before his salary is fixed? A. No, the Director pays the men according to what the others get. Q. When a man comes to work late does he report to you? A. No. If he comes late, he loses a quarter of a day. Q. What do you do when a man disobeys you or misbehaves? A. That has never happened to me. Q. How do you check the time a man takes to do a job and keep a record of it? A. I am not in a position to check a man's time owing to circumstances. I see to my men three or four times a day and notice how they work. I keep no record of the cost of the work, this is done at the office. Q. Do you put the men of your department on the different kinds of work yourself? A. Yes. Q. To whom do you report? A. I have no report to make. Q. Whom do you get your instructions from? A. From Mr. Papineau and Mr. Terreault. Q. What work have you on hand now? A. I have the dredges and the tugs. Only one at a time. Q. How many men have you in your department who are not employed on construction work? A. They are all employed and at work. Q. Have you a clerk in your department, and what is his work? A. I have a man to make out the orders and deliver the asbestos when needed. That man is sick just now and I am alone for that work. He will come back when he is better. Q. Who replaces you during your absence? A. I am never absent. My man St. Amand would replace me. Q. Do you punch the time clock? A. Yes. Q. Do you report to the timekeeper every day. If so, how? A. No I do not have to report. Q. How often do you report to the timekeeper? A. I never report except when a man is sick, it is the timekeeper who sees to this. Q. Have you any other men in your department who do not punch the time-clock? A. No, all the men punch the clock. Q. Do other departments or other officers interfere with what you consider the proper way of managing your department? A. No, I am never interfered with. Q. Have you more men in your department now than you had last year at the same period? A. I have less. Q. Have you more work ahead this year than last year? A. It is about the same thing. Q. Have you any changes to suggest in the way of managing your department which would give you better work from your men without any more expense to the government? A. My department is not in need of any changes. There is nothing to do to improve the present system. Q. Have you any complaints to make? A. No. Q. Are you paid extra for overtime? A. I very seldom do overtime, but when I do, I am paid extra. Last year I worked about two days overtime. Q. Have you any men whom you would like to see discharged for incompetency? A. No, as I am rather short of men. Q. Do you put all the cement on the bottom of boats? A. Yes. Q. What is the percentage of your cement? A. Two to one for the bottom. Q. What thickness on the bottom? A. One and a quarter inch and one and a half inch. Q. How do you weigh your cement and sand? A. We use buckets as a rule. Q. Is the pipe covering made by you as good as you can buy? A. Yes. Q. How long have they been making pipe covering in the yard? A. Since I am here. Q. Are you making the pipe covering faster than you can use it? A. It takes longer to make it than to put it on. Q. Do you buy any? A. No. Q. Are all boats, tugs and dredges cemented?—A. Yes, all.

Mr. O. GAUTHIER (Pattern Shop Foreman).

Q. What is your name? A. Ovide Gauthier. Q. How long have you been working in the yard? A. Eleven years. Q. How long have you been foreman? A. About six years. Q. Where were you employed before coming into the yard? A. I was with Beauchemin & Fils at Sorel. Q. What sort of work did you do there? A. Steamboat constructor, furnishings, etc. In the patterns, etc. Q. How old are you? A. Sixty years of age. Q. What is your authority concerning the employment and dismissal of men? A. I have no authority. I report to Mr. Papineau and if I have too many men I ask him if any should be discharged. I have never asked for more men here. Q. Do you consider all the men in your department as permanent employees? A. Yes, they are all permanent. Q. What do you do when a man comes late to work two or three times a week. Do you report accordingly? A. No. That is the time-clock's business. If a man does not punch the clock he loses a quarter day, and I have nothing to say about that. He can start again to work at 9.30. Q. How many men are absent every day from your department on an average? A. My men are very regular. None of them are often absent. Sometimes one or two a week. Q. Do you consider that you have enough men in your department for the work you have to do? A. Yes, for the present. Q. Do you consider that you have more men in your department than you need? A. Sometimes I have too many, at other times, pressing work comes along and I need more men. This is not regular. On the whole I have none too many now. Q. How many men have you employed in your department during summer? A. About the same number as during the winter. Q. At what work are those men employed during summer? A. During the summer there are accidents, breakages, etc., which require repairs, and that is what the men are kept at. Q. How do you get a new man when you need one? A. That has never happened. I have always those I want. Q. Do they ever send you a new man when you have not asked for one? A. That has happened once. Q. In that case what do you do with the man? A. I put him to work. Q. Do they ever send you a new man when you have no work for him? A. No. Q. Are you ever allowed to choose your men yourself? A. I have no choice to make. I have always had the same men. Q. Do you consider all the men who are sent to you as being competent for the work of your department? A. There is all sorts of work for all the men. There are some men for common work, etc. Q. If they are not competent what do you do with them? A. This has not happened yet. When work is slack, I send men to do work in other parts of the yard. Q. When a new man is sent to you, do you allot him to whatever work you think him fit for? A. Yes. Q. Do you report to the Director concerning the ability of a new man before his salary is fixed? A. I don't report, but I ask Mr. Papineau about it. Q. Do you fix the men's salary yourself? A. I refer to Mr. Papineau. Q. When a man comes late to work does he report to you? A. No. The time-clock does that. The man don't need to report to me. If he comes at 9.30 he loses a quarter day. Q. What do you do when a man disobeys you or misbehaves. A. That never happens. I would not put up with it. Q. How can you check the time a man takes to do a job and keep record of it? A. The jobs are numbered and the time spent on it by a man is controlled. If his work is changed, the time-sheet keeps tally of the change. This time-sheet is sent in every night. I do not keep any records myself, this is done at the office. Q. Do you allot the men in your department on the different jobs yourself? A. Yes, I give the work myself, the designs, etc., to the men. Q. Whom do you report to? A. To Mr. Papineau. Q. Whom do you get your instructions from? A. From Mr. Terreault. The work comes from the draughting room and I refer to Mr. Terreault for an order number to do the work. Q. What work have you on hand now? A. I have general work, repairs to the fleet, etc. New construction on No. 26, the *Portneuf* and the No. 8. Q. How many men have you in your department who are not employed on construction work? A. One man for the care of the shop, for sweeping, etc., and another man to take the patterns to the foundry. He takes the weight according to orders and takes

that to the office. He keeps the numbers of the patterns and takes care of them generally. Q. Who are those men? A. Edouard Bellerose keeps the patterns and William Lirette takes care of the shop. Q. Have you a clerk in your department and what is his work? A. No, I have no clerk. My son, who works at the trade, keeps the time lists and makes the requisitions. Q. Who takes your place during your absence. A. It is my son who is most able. As a rule nobody takes my place, as I am very seldom absent. Q. Do you punch the time-clock? A. No. Q. Do you report to the timekeeper every day, and if so how? A. No, I have no report to make. Q. Have you any other men in your department who do not punch the time-clock? A. No. Q. Do other departments or other officers interfere in what you consider the proper way of managing your department? A. No, nobody interferes. Have you more men in your department now than you had last year at the same period? A. I have about the same number. Q. Have you more work ahead this year than last year? A. About the same as last year. We don't know how the season will turn out. Q. Have you any changes to suggest in the management of your department, which would obtain better work from your men without any more expense to the government? A. No, I have on changes to suggest. I have worked 22 years with Beauchemin and Fils, making their patterns and I know that we cannot push the men to work any harder. They need time to think of their work and do it properly. Q. Have you any complaints to make? A. No, I have no complaints to make. Q. Can you read and write. A. Yes. Q. Are you paid extra for overtime? A. No. My men are paid time and a half when they work overtime, but that is very seldom. Q. Have you any men whom you would like to see discharged? A. No, because I need every one owing to pressing work which might turn up. Q. Do you keep any records of the patterns you have under your charge? A. No. Q. Do you consider the patterns are properly kept? A. Yes. Q. Is not the place too hot? A. No, I think not. Q. What kind of wood do you use? A. White pine. Q. Are your pattern makers all properly trained men, did they serve an apprenticeship? A. No. They never served an apprenticeship, but came and had been trained perfectly. Q. Have you a man in charge of the patterns to see they are not destroyed and to give them out, to keep a record and see that they are returned intact? A. Yes, Mr. Bellerose. He sees to all this, checks and takes care of all the patterns. Q. Are you responsible for the patterns in the storehouse? A. Mr. Bellerose is responsible. Q. Are you supplied with working drawings for making patterns? A. For new work, we get designs from the drawing room. For repair work we use old drawings. Q. Are the drawings well made and correct? A. Yes.

MR. JAMES DEANS (DRAUGHTING ROOM).

Q. How long have you been employed at the Sorel Shipyard? A. A little over four years. I came here in November, 1907. Q. What was your experience before coming here? A. I was working as chief draughtsman with Brown & Co., Clydebank. Q. What are your duties and responsibilities? A. I am mechanical engineering draughtsman. I have charge of drawings, designs, etc. I am responsible for all the drawings in the draughting room. Q. Did you serve an apprenticeship as an engineering draughtsman? A. Yes, I served for seven years with Renfrew, Lobnitz & Co. & Samuda Bros., London, England. Q. Are you chief draughtsman of the Engineering Department? A. Yes, I am chief draughtsman here. Most of the time I am working by myself. Q. How many men have you assisting you? A. None at all at present. Sometimes I have two or three assistants. Q. What are their names and experiences? A. I had one by the name of Deguise, who has been most of his time in the office, seven or eight years. He has had training in correspondence schools. Q. Do you take the full control of the engineering department, get out the drawings and designs for engines, boilers, dredging machinery, pumps, etc., electric lighting, size of the dynamos, steam piping, and bilge arrangements of pumping? A. The

electric light part I have not much to do with, but I have control of all the rest, dredging machinery, pump auxiliaries, bilge piping, etc. Q. Are you capable of working out the H.P. required, fix size of engines and boilers necessary to attain certain speed? A. Yes. Q. Can you calculate weights of engines, boilers, dredging machinery, etc.? A. Yes. Q. Are you familiar with constants, two-third power for speed rules, centres of gravity, etc.? A. Yes. Q. Are you familiar with the best designs of pumps and engine room auxiliaries? A. Yes, I am quite experienced in that. Q. Can you make your own drawings for boiler and engine room lay-out? A. Yes. Q. Can you draw out your own piping arrangements? A. Yes. Q. Can you produce the necessary drawings for details of cylinders, shafting, bed plates, propellers, and see them all through the various shops? A. Yes. Q. Have you any pratcical experience in engineering work, can you supervise shop work, erecting and placing on board? A. I never had a position like that. I have worked in shops, about two and a half years and I can give any information wanted in that line. I can go into a shop and see about the work of erecting, etc. Q. On trial trips can you take indicator diagrams and work out speeds, slip, etc..on a measure mile, take note of steam and coal consumption, etc.? A. Yes. Q. Do you understand Lloyd's rules and work out the formulas for making boilers, shafting, etc.? A. Yes. I do. Q. Do you order or make out specifications for ordering pumps and engines, boiler room auxiliaries, ash hoists, etc. A. Yes. I make specifications for the pumps and auxiliaries, engines, etc. Q. Have you had any experience with paddle wheel engines? A. Very little. Q. Have you had experience with turbines? A. Yes. Q. Have you had any experience with oil engines? A. No, I have no practical experience with oil engines. Q. Can you make up estimates of cost of engines and boilers, winches, dredging gear, etc.? A. No, I am not very able to make prices. I have had an idea about making prices for contract work, but I have not done that myself. Q. What data do you keep as to sizes of machinery, boilers, auxiliaries, H. P. developed on trial, revoution, speed, etc.? A. I keep calculations for boiler work, etc., and we keep records of the work I do myself. We never keep sizes of H. P. on trial, revolution, etc. Q. Do you make finished drawings of engines, boilers and auxiliaries and data for future reference? A. Yes, we have drawings. Q. Do you have a book of particulars in which to keep a record of performances, coal consumption per H.P., etc.? A. We do not need to keep that book. No boats that I know do it. This book is not kept. Q. Can you design propellers suitable for the best results of speed towing slip, etc.? A. We keep a second design.

MR. BRIDGES (DRAUGHTING ROOM).

My name is Frederick Bridges.

Q. How long have you been employed at Sorel Shipyard? A. Nearly 4 years. I came in May, 1908. Q. What was your experience before coming here? A. I started as apprentice in 1884, and was 9 years with the firm of Samuda Brothers, London; then I was 3 years out, and from 1895 to 1907 was with another firm in England Edwards Company, on the Thames; then I came out here. Q. What are your duties and responsibilities? A. I came here as ship's draughtsman and I give ideas how to make plans and details, and see that the foremen get these ideas. I have to go in also and see that the work is carried out. I follow the work right through. Q. Did you serve an apprenticeship as ship's draughtsman, where and for what term? A. No, not as ship's draughtsman but as a ship-builder. Q. Have you had any practical experience as a ship-builder? A. I have 3 years' experience in the ships. Q. Have you had charge of any part of the yard work practically, that is, the handling of men? A. Yes, at home. Here, no. I only tell the men what to do. I have no authority. Q. Are you chief draughtsman of the hull department? A. No. I just figure as draughtsman. Q. How many men have you assisting you, what are their names and ability as draughtsmen? A. I have had one, Mr. Houston. He is now in Ottawa.

Before that I was told I could get anybody I wanted. Mr. Houston is a ship's draughtsman. These boys we have in the office are only helps. Mr. Houston has had as long experience as myself. He is about 40 years of age, I think. Q. Are you capable of designing vessels as to form of lines, speed and stability? A. Yes. Q. Are you capable of receiving a specification, stating the requirements, able to fix dimensions, calculate weights, stability, centres of gravity, metacentres, centres of buoyancy, trim, etc.; by approximate rules to insure that vessels on completion will carry the specified dead weight on a given draught of water and be staple? A. Yes, I am able to do all that. That is what I have to do. Q. Can you design vessels on a level water line with a drooping keel? A. Yes, that is what I should do. Q. Can you design vessels in the ordinary way, square off the keel? A. Yes. Q. On completion can you incline the vessel to obtain her centre of gravity and work out curves of stability, statistical, co-efficients, moments of alter trim, moments of inertia, etc.? A. Yes, I knew it but it is a thing I have seldom done. I have only inclined two boats in all my existence, curves of stability, and so on. Q. What is your age? A. I am 44 years old. Q. Do you understand Lloyd's Rules, B.C., and Great Lakes Rules for the building and classification of vessels? A. I understand Lloyd's Rules. B.C. I have never worked. I have worked Bureau Valetes. Q. Can you draw out your own working plans and order material, forgings, spectacle bosses, rudders, etc.? A. Yes. Q. Do you get out plans and specifications for plumber work, heating, ventilation, electric light installation, etc.? A. Yes, I do the work for electric lighting required, for ventilation, etc. Q. Can you order outfits such as anchors, chains, windlasses, winches, electric light work; work out your own sizes for dynamos, steering gear and all usual outfit required for a vessel, such as deck rigging, blocks, etc.? A. Yes. On the *Montmagny* I took charge of all that, worked out dynamos, etc. Q. Have you any experience as to costing and making up estimates for the cost of vessels? A. Yes. Before I came out here I did all the estimating for about 6 or 7 years for proposed vessels. Q. Have you had experience in working out stresses or derricks, mast-mountings, stays, shrouds, etc.? A. Yes. I may say here I have only seen the work, but I can figure the hours and I know the rate of pay. I have never made estimates here at all. I do not know how they arrive at estimates. Q. Are you familiar with the planimeter and integrater? A. Not with the integrater. The planimeter, I use. Q. Can you work out displacements on cross-check system? A. I check my figures by taking vertical sections and horizontal sections. Q. Can you figure out the required I.H.P., to drive vessels at given speed by constant and two-third power, etc? A. Yes. Q. What data do you keep, or what system do you have of keeping record of vessels built, dimensions, weight, scantlings, invoice material, rivets, displacement, tonnage, dates of construction, launching and finishing? A. I just keep them all in a portfolio of my own. I take it that I should hand over that data to the yard. I take copies that I want myself. This is not kept in book form, and there is no proper record kept. Q. Do you make finished drawings of vessels built for future reference? A. Yes, when I have time, but we are kept rushed as a rule. I have drawings of No. 21 in pencil and will finish them. Q. Are you capable of taking charge of the moulding loft? A. Yes. Q. Are you capable of taking charge of construction of a vessel in all departments? A. Yes. I can take hold of men and build a boat. Q. Have you had any experience of repair work? A. Not very much. The yards on the Thames do little repair work but mostly new work. Q. Have you had any experience in making up the cost of repairs? A. No, I have not.

MR. JOSEPH P. HEREUX (CHIEF DRAUGHTSMAN).

Q. How long have you been employed in Sorel shipyard? A. 6½ years. Q. What was your experience before coming here? A. I was a contractor. I also did work for building contractors. Q. What are your duties and responsibilities? A. I am chief draughtsman. I have to look after all the draughtsmen except two experienced per-

sons, Mr. Bridges and Mr. Deans. I give work to do to all the others. There are 8 draughtsmen and I have to look after them. I do drawing myself. Two years ago we made steel frame work for the boiler shop and cars for the Railway Department, and I supervised all that work. Q. Did you serve an apprenticeship as an engineering draughtsman? A. Yes. Q. Where, and how long did you serve? A. I am a civil engineer from the Polytechnical School in Montreal. I graduated in 1885 as a civil engineer. Q. Are you chief draughtsman of the engineering department? A. Yes. Q. How many men have you assisting you? A. Generally I have 10. With myself we are 11. I have two experts. Q. Who are they and what is their experience? A. One is a civil engineer, draughtsman; the other is a blue-print man. Q. Are you capable of designing vessels as to form of lines, speed and stability? A. Yes. Since 6 years I worked in ship building. I lately took the No. 36 and No. 38, and I supervised all the designs which were made in the draughting room. Q. You have had experience in building? A. Yes, I was a contractor for 6 years. I never had experience in reinforced concrete. I have made foundations for many big buildings, churches, etc. Q. How old are you? A. I am 40 years of age. I am a member of the Canadian Society of Civil Engineers.

Mr. J. U. LATRAVERSE (Cost Department).

Q. What is your name? A. J. U. Latraverse. Q. How long have you been working in the yard? A. 5 years next June. Q. How long have you had charge of your department? A. Two years now. Q. Where were you employed before coming to the yard? A. I worked for L. Chaput, Son & Co., Montreal. Q. What kind of work were you doing there? A. At certain times I was in the correspondence department; then I had charge of the collecting ledger, and I was the invoice clerk. Q. What is your age? A. I am 27 years old. Q. What authority have you regarding employing and discharging men in your department? A. I have very little authority. I cannot proceed by myself. I have to report to the Director if anything does not go right. I can get a man discharged this way. This happened a year ago, when a man was not giving satisfaction and I had another man take his place. Q. Are all the men in your department permanent employees? A. No. Q. When a man comes late two or three times a week what action do you take? A. The first time I tell him, the second time and the third time we take note of it and it is taken out of his holidays. Q. Do you have much inconvenience in your department from men being away? A. No. Q. Do you consider your present staff large enough to handle the work in your department? A. Not with the system we have. I think the chief accountant in Ottawa will have to make some changes with regard to the system here, to have the department's work clearer. With the present system, I have to go into two or three different places to find the cost of work, and this should be changed so that the cost could be had at once and together. Q. Do you consider your present staff too large for the work you have to do? A. No. We have about the number of men we need. Q. Do you keep the same number of men in your department the whole year around? A. For the last year we have had the same number, although at times we have so much work that I have to get a man from the other department for 2 or 3 days. Q. What do these men do during the summer months? A. They keep the cost of new construction. We have less repairs to keep track of, but there is always something to do. Q. During the summer months have you enough work to keep your whole staff busy? A. This depends on circumstances. Sometimes for 2 or 3 weeks perhaps, the men will not have much to do, then 2 or 3 weeks after, the work rushes in and we are in great need of more men. It would not be wise to lay any off. Q. Do you ever have a new man sent to your department without asking for one? A. Do you mean if I get a new man without asking the Director for one? I have to ask the Director. I

never had a man sent to me without having work for him to do. Q. Are you allowed to choose your men? A. No, if I want a new man I have to ask the Director. Q. Do you consider all the men sent to you qualified for your work? A. Yes. They are qualified now. At the beginning I had one who was not qualified but he did not take long to become so. Q. Do you look into their qualifications? A. When they come I give them a certain kind of work to do and if they cannot do it, I realize they are not qualified, and I have to keep trying them until they can be of use. Q. When a new man is sent to your department can you place him at what kind of work you see fit? A. I have not tried that yet, but I can place a new man anywhere I choose. Q. Do you fix the rates of pay in your department? A. No. When they come in the Director asks me about their ability, I make a report and he fixes the salaries. The same thing is done for an increase. I have no choice in fixing salaries. Q. What do you do if a man does not do as you tell him, or misbehaves? A. That has never happened that a man is not willing to do what I ask. If he did I would report him to the Director, and tell him all about that man. Q. Whom do you report to? A. Last year I was reporting to the chief accountant because he wanted me to tell him everything about my department. When he was not in I would report to Mr. Papineau. The new accountant never asks me anything about the department, so I report to Mr. Papineau every time. Q. Who do you get your instructions from? A. From the Director, the superintendent and the chief accountant. Q. Who takes your place when you are absent? A. The ledger keeper, Mr. Prudhomme, but nobody did it so far. In fact I have really no man to take my place. Q. Do you sign the book? A. Yes. Q. Have you any interference from any other department or officials with what you consider the proper running of your department? A. No, nobody has ever interfered. Q. Have you more men in your department now than you had at this time last year? A. Yes, I have one more. Q. Have you any more work to do now than at this time last year? A. I have much more this year. Q. Have you any changes to suggest in the running of your department by which you can get better work out of your men without additional expense to the government? A. I consider that a change suggested to have the system clearer, in order not to lose time when looking up the cost of something, and to have all that comes in a job filed together, would be a good change. I had a mind to begin that system at the beginning of the year in April next. Q. What system of cost keeping do you have as to new constructions? A. For new construction, I receive orders from the superintendent to open an account for such and such a job, and I have all that is required on this job, men, etc., charged to the job, and at the end of the month, the pay-lists are balanced and I have the direct cost of the job. This account is open until the work is through. Q. Can you by turning up your books quickly tell the cost of construction of hulls, engines, boilers, winches, pumps, weight and cost of steel material, rivets, wood, and carpenters' and joiners' outfit? A. Yes, we can have that but I have to look all through my books to get at it. For the cost of a boiler, it is not very long to get it, but to have all details written, would take longer because our entries are very extensive. Q. Have you any system of tabulating the weight and cost of steel plates, angles, tees, Z bars, channels, slips, rivets, etc., weight and cost of production in general? A. No. We do not keep tables at all. Q. Do you keep separately the labour cost of platers, riveters, caulkers and drillers on ship and machinery construction? A. I can get the work done by the machinists and by the boiler makers in detail. Q. How is foremen's time charged? A. Foremen are charged to the maintaining of their shop, except three or four, and we divide their time they are working on job numbers themselves and we add a percentage to the cost. Q. How do you keep the cost of joiners' and cabinet makers' labour? A. It is divided and kept separate. I have a column for the cabinet shop or for the carpenter in the ledger, where I post all charges for construction. When it is for machinists, it is posted in the column for machinists, etc. Q. How do you keep the cost of joiners' and cabinet makers' materials? A. When the men want wood out of the shop they make a requi-

sition and the wood is charged to such a job number. Q. How do you keep the cost of ironmongery? A. The blacksmith's shop takes orders and we note every job, the clerk makes requisitions for, etc. Q. Do you get the requisitions from the store-keeper every day and are they up to date? A. We get requisitions the day after they are made. Q. How many days are the requisitions behind hand at present moment? A. Perhaps a day or two. Q. Where do you get your cost of materials from? A. I get it from the store-keeper. Q. Do you keep records of cost of all outfits, beddings, etc.? A. Yes, we keep a record of all the goods on a new boat. Q. What do you charge the repairs to outfits against, viz.: Life belts, mattresses, cooking utensils, etc.? A. We issue a number for each of them. We issue those numbers every year for the operating of the boat, which run the whole year and everything is kept on those numbers. Q. What are your duties and responsibilities? A. My responsibility is to keep cost properly. When I notice something charged on a job which is not proper, I notify the party accordingly, and if there is no change, I report to Mr. Papineau, who sees about it himself.

MR. LANGLOIS (STEAMFITTER FOREMAN).

Q. What is your name? A. Joseph Langlois. Q. How long have you worked in the yard? A. Since last June. Q. How long have you been foreman? A. Ever since I came here. Q. Where were you employed before coming into the yard? A. With the Richelieu Company. Q. What sort of work did you do there? A. All the kind of work in my line generally. Q. How old are you? A. Forty-eight. Q. What authority have you concerning the employment and dismissal of men? A. No authority whatever. It is the Director who takes and dismisses the men. Nevertheless, Mr. Papineau tells me that if anybody does not go right that he will see to it. Q. Do you consider all the men in your department as permanent employees? A. Those who are here have been employed for a long time and I believe them permanent. Q What do you do when a man comes late to work two or three times a week. Do you report him? A. This has not happened since I am here. Q. How many men are absent every day from your department on an average? A. Perhaps one in a week, other times none at all. Q. Do you consider you have enough men in your department for the work you have to do? A. Yes, for the present. Q. Do you consider you have more men then you need? A. Certainly not. Q. How many men were employed in your department during summer? A. I don't know, I was not here last summer, but I believe we keep the same number. Q. How do you get a new man when you need one? A. I do not need to ask for any, the men come themselves to seek employment with letters from the deputies, etc. Q. Do they ever send you a new man when you have not asked for one? A. No. Q. Do they ever send you a new man when you have no work for him? A. No. Q. Are you ever allowed to choose your own men? A. This has never happened. Q. Do you consider all the men sent to you as competent for the work of your department? A. Those I have had until now are competent. Q. When a new man is sent to you, do you allot him to whatever work you like? A. Yes. Q. Do you fix the men's wages yourself? A. Yes. Q. Do you report to the Director regarding the ability of a new man before his salary is fixed? A. The Director is asked to fix the salary. Q. When a man comes late to work, does he report to you? A. The time-clock sees to this. If he comes at 9.30 and punches the clock and starts to work he loses a quarter day. Q. What do you do when a man disobeys you or misbehaves? A. I have not yet had occasion to act, but I would not put up with a man who would disobey me. I would report him at once to the Director. Q. How can you check the time a man takes to do a job, and keep a record of it? A. I cannot keep any record. This is according to the work he has to do and I have to use my own judgment to see that a man works as quick as possible. Q. Do you allot the men of your department to the different sorts of

works? A. Yes. Q. To whom do you report? A. I report to the office. Q. Whom do you get your instructions from? A. From the office. Q. What work have you on hand now? A. I have all the pipe connections to make for the boilers and all tinsmith work for the whole of the fleet. Q. How many men have you in your department who are not employed on construction work? A. I have an apprentice and I use him as a clerk. Q. Who is that man? A. Adrien Jaures. Q. What is he employed at? A. He makes the requisitions, keeps the men's time, sees to the tools, sweeps the shop, etc. Q. Who takes your place when you are absent? A. I have three men who can replace me, one Bachand, who has 19 years experience, one Champagne and one Langlois, who are also experienced men. Q. Do you punch the time-clock? A. No. Q. Do you report to the timekeeper every day, and if so, how? A. No, I have never been asked to do so. Q. Have you any other men in your department who do not punch the time-clock? A. No, they all punch the clock. Q. Do other departments or other officers interfere in what you consider the proper way of running your department? A. No, never. Q. Have you more men in your department now than you had last year at the same period? A. I cannot say. Q. Have you more work ahead than you had last year? A. I cannot say. Q. Have you any changes to suggest in the running of your department by which you could get better work from your men without additional expense to the Government? A. All the changes possible I have made myself for the better. The men of the shop are of opinion also that things are for the best. Everything runs now as well as possible. Q. Have you any complaints to make? A. No. Q. Can you read and write? A. Yes. Q. Are you paid extra for overtime? A. No, the men are paid extra at about the usual rate Q. Have you any men whom you would like to see discharged on account of incompetency? A. No, I have none that I would like to have dismissed. If any should leave, they would do so of their own accord. Q. Do you do all the piping work? A. Yes, all that is required is done here. Q. Do you make all piping bends as per drawings? A. Yes, all is done here. Q. Do you do all the pipe covering? A. This is done by Mr. Legault, a special man. Q. Do you see to the repairs to plumbing, etc.? A. Yes. Q. Do you speak English? A. No.

MR. LACOUTURE (CHIEF ACCOUNTANT).

Q. What is your name? A. Louis Lacouture. Q. How long have you been working in the yard? A. Since the 2nd January, this year. Q. How long have you had charge of your department? A. Since I am here. Q. Where were you employed before coming into the yard? A. I was part owner and manager of the Canada Navigation Company. Q. What kind of work were you doing there? A. I had the managing of the business. Q. What is your age? A. 54 years of age. Q. What authority have you regarding employees and discharging men in your department? A. I have none at all. Q. Are all the men in your department permanent employees? A. I dare say they are all permanent. Q. What do you do when a man comes late two or three times a week? A. This is brought to Mr. Papineau's knowledge. Q. Do you have much inconvenience in your department from men being away? A. No although once I found out there was a man who was absent, giving as a reason that he was sick and I had to remind him that Mr. Papineau had told me he was the party to look to for leave of absence. Q. Do you consider your present staff large enough to handle the work in your department? A. Yes, it is sufficiently large and I would not take on any more. Q. Do you consider your present staff too large for the work you have to do? A. With my experience here, I cannot say there are too many but I am sure there are enough. Q. Do you keep the same number of men in your department the whole year around? A. I do not know, I cannot say. Q. What do those men do during the summer months? A. I cannot say. Q. Have you enough work during summer months to keep your whole staff busy? A. I cannot say. Q. Do you ever have a new

man sent to your department without asking for one? A. I never had any. Q. How do you get a new man when you need one? A. I would have to apply to the Director of the shipyard. I think this is the only way. Q. Do you ever have a new man sent to your department when you have no need of one? A. No. Q. Are you allowed to choose your own men? A. It does not seem so. Q. Do you consider all the men sent to you qualified for the work in your department? A. From what I know now they are. Q. Do you look into their qualifications? A. I have not so far. Q. If you consider a man is not qualified for work what do you do with him? A. I would report him to the Director, because just now I have no authority towards hiring or discharging the men. Q. When a new man is sent to your department, can you place him at what kind of work you see fit? A. No, Mr. Papineau sees to that. Q. Do you fix the men's rate of pay in your department? A. No, I do not. Q. How is the rate of pay fixed? A. Mr. Papineau sees to that. Q. What do you do if a man does not do as you tell him or misbehaves? A. I report him to Mr. Papineau. Q. Whom do you report to? A. To Mr. Papineau directly. Q. Whom do you get your instructions from? A. I am supposed to get them from Mr. Papineau. Q. Who takes your place when you are absent? A. My assistant, Mr. Olivier Cardin. Q. Do you sign the book? A. Not always. Q. Have you any interference from other departments or officials with what you consider the proper running of your department? A. No, I never have any interference. Q. Have you more men in your department now than you had at this time last year? A. I think it is just the same. Q. Have you any more work to do now than this time last year? A. I don't think there is any more. Q. Have you any changes to suggest in the running of your department by which you can get better work out of your men without additional expense to the government? A. This is a question that we have been debating with Mr. Papineau about changing the way of keeping track of the direct cost; that is, I would suggest that every department would have their own accounts, with each a general ledger in which all expenses, wages, materials, maintenance of shop, and other accounts would be entered separately. This would take no more men, would reduce the work and have better results. Q. Do you know when the books were last audited? A. I do not know. Q. Do you check all payments? A. Yes. Q. Do you know whether prices stated on invoices are correct or not? A. No, this is outside of my control. Q. How do you handle your petty cash account? A. We have an advance from Ottawa of a certain amount on which we issue cheques to make petty disbursements according to Mr. Papineau's requirements. Q. Who handles petty cash accounts? A. Myself alone. The petty disbursements accounts appear under Mr. L. J. Papineau and Mr. Lacouture. We have an advance of $1,000, and up to now I think there is about three or four hundred dollars disbursed. We balance the account once a year and whatever balance is left, we credit the treasurer and a refund is made to the receiver general at the end of the fiscal year. Then we start a new account.

Mr. CHAMBERLAND (Storekeeper).

Q. What is your name? A. H. C. Chamberland. Q. How long have you been working in the yard? A. Two months, I commenced on 22nd January last. Q. How long have you had charge of your department? A. Since I am here. Q. Where were you employed before coming into yard? A. For the last ten years, I have not done any regular work. I was speculating on property in Montreal, buying and selling. Q. What is your age? A. I am 56. Q. What authority have you regarding employing and discharging men in your department? A. I have no authority at all. Q. Are all the men in your department permanent employees? A. Yes. There are two that were hired just for the stocktaking, Mr. Cardignan and Mr. Bourgeois. They will be laid off when the stocktaking is over according to Mr. Papineau. Q. What do you do when a man comes late two or three times a week? A. We generally commence work

at 8.30 in the morning. I am here when the men arrive. They sign the book. I think they are on time always since I am here. Q. Do you have much inconvenience in your department from men being away? A. No. Q. Do you consider your present staff large enough to handle the work in your department? A. Yes, I think so. Q. Do you consider your present staff too large for the work you have to do? A. Not for this time of the year. Q. Do you keep the same number of men in your department the whole year around? A. I am quite strange to the business and I do not know whether the number of men is the same or not. Q. Do you ever have a new man sent to your department without asking for one? A. No. Q. How do you get a new man when you need one? A. I was to have an assistant when I came here through the deputy, but I did not ask him. I have to go to Mr. Papineau to get a new man. Q. Do you ever have a new man sent to your department when you have no need of one? A. No. Q. Are you allowed to choose your own men? A. No, I don't think so. Q. Do you consider all the men sent to you qualified for the work of your department? A. Yes, I think they are all right. Q. Do you look into their qualifications? A. No. Q. If you consider the man is not qualified for work what do you do with him? A. If I found a man unqualified I would make a complaint. Q. When a new man is sent to your department, can you place him at what kind of work you see fit? A. I cannot do that myself. Mr. Papineau does that. That is what he has done since I am here. Q. Do you fix the men's rate of pay in your department? A. I have nothing to do with that. Q. How is the rate of pay fixed? A. Mr. Papineau does that. Q. What do you do if a man does not do as you tell him, or is misbehaving? A. In that case I would advise Mr. Papineau. I only once had trouble about a man smoking. I reported to Mr. Papineau who gave the man notice that he would turn him out if it happened again. Q. Whom do you report to? A. Mr. Papineau. Q. Whom do you get your instructions from? A. I get instructions from no one. I get orders from Mr. Papineau first and he is my chief. Q. Who takes your place when you are absent? A. No one. Q. Do you sign the book? A. Yes, I sign the store book. Q. Have you any interference from other departments or officials with what you consider the proper running of your department? A. No, nothing of the kind. Q. Have you more men in your department now than you had at this time last year? A. I was not here. Q. Have you any more work to do now than this time last year? A. I was not here. Q. Have you any changes to suggest in the running of your department by which you can get better work of your men without additional expense to the government? A. Yes, there are too many branches in this department. All the clerks are apt to go into corners out of the way places, so I think it would be better to put a man in charge of each department. Take the supply department, for instance. A man should be put in charge of this department during summer. We have one for the winter, but he is discharged in the spring. Requisitions come in and a tally is kept of goods going away only in one room. A man should be kept on all the year round to take charge of that branch and be responsible. When goods are delivered to captains to replace destroyed or broken goods, the broken pieces, etc., should be returned. Q. What are your duties and responsibilities? A. When I came here, Mr. Papineau said there was about $200,000 worth of stock. He said: 'You and I are the responsible men for the whole stock.' I told him that my pay was only $80 a month, and that it was too much responsibility for the money. He said he could not do any better. I think I am not paid enough. Q. How many men have you under you? A. Sixteen at the present time, that is men, and two women. Q. Are you responsible for all materials supplied to the yard? A. It is as I have told you before. I am responsible. Q. Do you keep your stock books up to date day by day? A. Yes, day by day, and up to date. The material given out yesterday was all entered in the books. There may be a few requisitions at the end of the day left in the books, but as a rule all is entered. Q. Do you send requisitions to cost department each day? A. Yes, as soon as they are entered in the book they go to that department as far as I know. Q. Are all materials entered

on book same day as received? A. I cannot answer to that now. Q. How do you figure out the overhead charges of your department? A. There is no percentage added to the cost coming in. This is not my work. Q. Do you consider your stock too large? A. Not so far as I can judge. I have only been here two months and I am too busy to find out. Q. Are any stores given out at night? A. Not after six o'clock. Q. Do you check all goods as being up to samples when bought that way? A. Yes. Q. Do you have a sample here to check by? A. Not always. We have the same stock in hand and make comparison. Sometimes we send the samples to Ottawa, but this goes though Mr. Papineau. Samples are not returned to me because I do not send them myself. I do not know whether Mr. Papineau gets the samples back. Q. Who checks all these goods? A. Mr. Mayer. Q. Is he directly under your charge? A. Yes, he is under my charge. Q. Is he capable of telling when goods are up to samples or specifications? A. Yes, he can do that. Q. If he is in doubt whom does he consult? A. He comes to me, sometimes to Mr. Papineau, and sometimes to Mr. Terreault. Q. If goods are not same as samples or specification, what does he do? A. We consult with Mr. Papineau and he arranges the matter. Yesterday we had something wrong, we sent an order for crockery and they sent it, but on the invoice they had plain white granite. They had made a mistake. I told them to accept it and that the matter would be looked into. Q. If he reports to you what action do you take? A. I generally consult Mr. Papineau over such things. Q. When any goods, which have been charged out against a construction are returned to stock, do you credit the construction with these goods? A. They generally only take what they want. I have never heard of anything being brought back. Q. Do you order all goods for stock? A. Yes, I do all the ordering. Q. Have you any minimum quantity fixed for the amount of certain goods in stock? A. No, we have to go by our own judgment in this. Q. Can you tell from your books just how much of each material is in stock? A. Yes. Q. When was stock taken last? A. I do not know. Q. Do you know what value was placed on stock then? A. I do not know. Q. Have you any idea of the value of the present stock? A. None at all. Q. Is any material ever given out of stock without a requisition? A. No, never. Q. Is there any material so placed to which access could be obtained without your knowledge? A. Yes, there are lots of places like that. The clerk comes here, takes the key, goes to the shed and takes out what he wants, and the man may go there and take things and I would not know. There is a watchman looking after things. Q. Do you consider that any material could be bought cheaper than at present? A. No, I think the prices are pretty fair. Q. Do you consider the present method of buying material satisfactory? A. I have never thought about the matter. Q. Do you check all invoices as to prices and extensions? A. Yes. Q. Does anybody else check these invoices? A. Yes, Mr. Laucoutre checks the invoices. He knows prices the same as myself. He keeps all the orders. We have four copies of the invoices and of the orders, I have one, he has one, we send one to Ottawa, and I don't know what becomes of the other. Q. What do you do with the invoices after checking? A. They are sent up to Mr. Lacouture.

MR. LUSSIER (TIMEKEEPER).

Q. What is your name? A. Alfred Lussier. Q. How long have you been working in the yard? A. Since last June. Q. How long have you had charge of your department? A. Since I am here. Q. Where were you employed before coming into the yard? A. I was manager and bookkeeper of 'Le Sorelois,' at Quebec for 23 years. Q. What is your age? A. I am forty years. Q. What authority have you regarding employing and discharging men in your department? A. No authority at all. That is under the Director's authority. Q. Do you consider your present staff large enough to handle the work of your department? A. There would be room for another man. By working very much, we get through the work, but my assistant is obliged to work

at night. Q. Do you fix the men's rate of pay in your department? A. No. Salaries and increases are given by Mr. Papineau. Q. Whom do you report to? A. To Mr. Emery, the paymaster, Mr. Champagne and the Director himself. Q. Whom do you get your instructions from? A. Always from Mr. Papineau. Q. Who takes your place when you are absent? A. My assistant, Mr. Boucher. Q. Do you sign the book? A. Yes, always and so does my assistant. Q. Have you any interference from other departments or officials with what you consider the proper running of your department? A. The paymaster comes now and then to look at my books. We are responsible for the same office, and he does not meddle with giving orders. Q. Have you any changes to suggest in the running of your department by which you can get better work from your men without additional expense to the government? A. I claim that the books at my disposal are not of the proper size. For instance, the present book of the employees is not wide enough. One of the larger size, about the size of that used for the fleet, would suit better. Also we are rather cramped for space and I would like to have a private office and also a waiting room, and a room for my assistant. We would also require a spare room in case of accidents where the sick and wounded might find accommodation. Q. What are your duties and responsibilities? A. I have to keep the men's time, prepare the pay-sheets and see that order is kept in the yard. I also see that the men are well treated. I provide all the stationery for the offices here. I also keep a stock of drugs which requires a good deal of attention in case of accidents, etc. Q. How many men have you under you? A. Two, a messenger and my assistant. Q. Are you responsible for the time of all the men in the yard? A. Yes, I am responsible. All the reports are made by the time-clock keeper. Every morning I have to check his report. I have to see that those who punch the clock at 9.30 are deducted for a quarter day. The same thing in the afternoon. Q. Do you keep the time of the office staff? A. Those who are paid by the day only. The others sign the presence book, which is sent to Mr. Papineau. Q. Are you responsible for keeping the time-clocks in proper working order? No. Mr. John Hayden has charge of them. Q. How often do you inspect the clocks? A. The clocks are inspected twice a week but almost daily by Mr. Hayden who is supposed to make his report every day. Q. Do you see that all the clocks are keeping all the same time? A. Mr. Hayden sees to that. Q. If one clock should be five minutes ahead of the others, what do you do? A. I have never noticed the clocks being fast or slow. Q. Is all the time kept from the time cards? A. Every morning at seven o'clock a watchman reports those absent which we enter in our book. We check the time cards in case of absence, when a man is not satisfied with his time. Q. Do you ever have any trouble reading these cards? A. Sometimes the ribbon in the clock is defective. We can always make out the cards but sometimes they are not very legible. Q. What time in the morning does the boy come to give out the keys to clock men? A. At seven o'clock in the morning he hands them over to my assistant here who enters them immediately in the book. Q. What happens if the boy does not come in. How would the men get the keys? A. The watchmen come and get their keys themselves. Q. At what time in the morning and at noon do the clock men open and close card boxes? A. The clocks are supposed to be opened at 6.40 in the morning and they are closed at seven. Again they are opened at 11.55 at noon and closed at 12 sharp. They are closed for good at six o'clock at night. Q. Do they always return the keys to you? A. Yes, they are always returned each to its proper place. The same thing in the evening. Q. Do you keep any record of time the keys are returned to you? A. No. The men are anxious and come regularly with their keys. Q. When there is any complaint from the men regarding their time, do they come to you? A. Yes. We discuss the matter together and check their cards with the clock. Q. Do you make up the pay-roll? A. Yes. Q. Who checks it? A. It is first checked by Mr. Emery, then by the paymaster and the Director. Q. How is it checked? A. We make out the time shown as put in by the men, and on the report

of the watchman who checks with Mr. Emery and we send the pay-list to Ottawa in duplicate. This pay-list is signed by the Director and Mr. Champagne and we pay by cheques.

MR. EMERY (DIRECTOR'S SECRETARY).

Q. What is your name? A. Henri Emery. Q. How long have you been working in the yard? A. Fourteen years next July. Q. How long have you had charge of your department? A. Since I am here. Q. Where were you employed before coming into the yard? A. I was in the wine business at St. Roch de Richelieu, manufacturing and selling wine. Q. What is your age? A. Forty-nine. Q. Do you consider your present staff large enough to handle the work in your department? A. Hardly large enough. We have a heavy department and my boy has to make up the pay-lists. All the other departments are grouped around mine and I have some trouble at times. I think another man would be wanted. I have no regular typewriter and I would require one. Q. Whom do you report to? A. To Mr. Papineau. Q. Whom do you get you instructions from? A. From Mr. Papineau. Q. Who takes your place when you are absent? A. There is nobody, but I am very seldom away. In fact I have not been absent for 14 years. Q. Do you sign the book? A. Yes. Q. Have you any changes to suggest in the running of your department by which you can get better work from your men without additional expense to the government? A. There should be a change in our having to do the work of the different departments. I want more help and I would like to have a typewriter. Q. What position do you hold? A. I am secretary to Mr. Papineau. I have passed the examinations in 1897. Q. What are your duties and responsibilities? A. My duties are to attend to the correspondence, keep the files, check the pay-lists, keep track of all recommendations, with which we have great trouble. We sometimes get 20 or 25 letters of recommendation in a bunch. We keep the men's record cards, when men are going away, when they are increased, etc. We have about 25 different indexes to keep about men's letters, requisitions, etc. I have to check all requisitions. I take the requisitions and when they come back I make three copies of each one. Q. Do you attend to all correspondence? A. As secretary I do. Mr. Terreault sometimes reads letters but I write Mr. Terreault's letters as well as keep copy of all the official correspondence. Q. How many men have you under you? A. I have one boy. Q. Do you check over the men's time? A. No. I check the lists to see to the correctness of figures. Q. Do you check the pay-lists? A. Yes, I check the pay-lists to see that everything corresponds. Q. Do you check any invoices as to prices and extensions being correct? A. No, that is the accountant's business. Q. Do you keep any records of attendance of the men in the offices? A. Yes, we have a regular book where the officers sign. Q. How are the men's rates of pay fixed? A. That is Mr. Papineau's own privilege at the suggestion of the foremen. Q. Is a man rated as soon as hired, or after he works a few days, and then according to his ability? A. As a rule, a salary is given to begin with to see what the man can do. Sometimes the men are recommended by foremen for an increase of salary. Q. Do you keep a complete record of all correspondence? A. Yes, of every letter, document, etc. Q. Do you keep a complete record of all requisitions for material? A. Yes, a complete record. Q. Are you advised when a requisition is filled? A. Generally the checker gives copies of requisitions, and when they are filled, he brings them back, we attach them to the orders and compare both to see if everything is all right. We compare them to see if the goods are as asked for in the requisition. Q. Do you keep a record of the requisitions as returned from Ottawa? A. Yes, a complete record is kept. Q. Do you keep any records as to the cost of different materials? A. No, I do not keep a record of that. Q. What does your assistant do? A. My boy does typewriting, he keeps different accounts and he helps me to keep the files. Q. How long has he been here? A. Six years. He is a good little boy. Q. Did you do the same work for Mr. Desjarats? A. Yes. Q. Were conditions in the

office the same in Mr. Desbarats' time as at present? A. We have more work now than then. The work is developing all the time. Q. Do you know if any men have been discharged recently for any other than political reasons? A. No, I don't know, I think they were all discharged for political reasons. Q. Do you know if any men are ever taken on when not needed, because they have letters from members of parliament? A. I would not say there are, but the pressure brought to bear is very hard. It takes a man like Mr. Papineau to resist that pressure. The same trouble has always existed. Q. Do you know if all men having letters are given work? A. No. I have all letters in my drawers. We would have to double the shipyard to give all the work asked for. Members of Parliament come from different counties with lists of five, eight and ten men, and fight between themselves about getting positions for their men. About a month ago a member insulted Mr. Papineau because Mr. Papineau would not take on his men. That deputy said to Mr. Papineau, 'You will be kicked out of this.' Q. The painters that were discharged and were taken back again, were all the same men that came back? A. Of course, the paint work generally begins in the spring, and we have not so much work during winter. So in February there was very little work and those men were discharged. I do not remember exactly the number. That was this year. They were not discharged for political reasons, but because there was no work to keep them on. Two weeks ago they were taken on again. Q. Do orders ever come from Ottawa to discharge a man? A. No. In the case of there being no work it is left to Mr. Papineau's orders. The deputy minister sends letters sometimes to say that so-and-so must be discharged, but no reason is given.

MR. TERREAULT (ASSISTANT DIRECTOR).

Q. What is your name? A. N. H. Terreault. Q. How long have you been employed in Sorel yard? A. Ten years. Q. How long have you been assistant director? A. Three years. Q. What are you professionally? A. I am civil engineer, a graduate of the Polytechnical School of Montreal. I was three years draughtsman wtih the Phœnix Bridge and Iron Works, Montreal. Also with the Cambria Steel Co., of Johnston, Penn., U.S.A., also with the General Electric Co. of Schenectedy, New York, and Municipal Engineer in Vanier's office, Montreal. Q. What are your duties and responsibilities? A. I see to the execution of the work under the direction of Mr. Papineau, and I understood from Mr. Desbarats that I was to act as consulting engineer for the fleet alterations, but one day I heard Mr. Papineau say he was the consulting engineer. I am not directly responsible for repairs. The fleet is not under me, but I look after the repairs. Q. Do you take direct charge of the drawing office staff, approve dimensions of vessel building, fix sizes of engines, boilers and auxiliaries, supervise the designs, as to form of lines, details of construction, stability, carrying capacity, scantlings, etc.? A. Mr. Papineau has all that responsibility, but I believe he holds me responsible if any mistakes are made. Q. Do you personally supervise the construction of hulls, machinery auxiliaries, etc.? A. Yes. Q. Do you engage heads of departments, foremen and workmen and discharge them personally? A. No, I have nothing at all to do with the engagement or discharging of the men. Q. Do you supervise the launching of vessels, hauling boats on slips, etc.? I do supervise the launching of vessels. Q. What is the heaviest boat you can slip? I believe we can dock 1,200 tons. Q. Do you take stock annually? A. I have nothing to do with stock-taking. Q. Have you at any time made valuation of the yard, appliances, tools, buildings, etc.? A. No. Q. Do you make an annual report of the work done, work on hand and money spent for Ottawa? A. Mr. Papineau does that, but I am supposed to help him. Q. Do you ever compare the amount of work done with the expenditure of the yard, to find out if the work has been carried on economically? A. No. Q. Do you make up the cost of proposed new vessels before hand? A. I make a rough estimate according to the old construction we had before. Q. Do you keep proper track of the

cost at various periods during construction, so as to be able pick up any leakage? A. Yes. We have information from the cost department several times during construction. I had that last week. Q. On completion of the vessel do you compare the actual cost with the estimate and the time taken to build? A. Not in a special way. When a boat is finished that is all there is to it. Q. What are your daily duties? A. I send orders to each department for the work that has to be done during the day. If material is to be ordered for the construction, I see that the lists are made and sent to Mr. Papineau. I go ahead and order, and keep a memo. on my table. Q. What are your hours of attendance at the yard? A. I stay here at all times, every evening until ten o'clock very often. I am telephoned at the house during summer at almost any time. My regular hours are from 8.30 in the morning till 5 p.m. Q. Who has the power of acting during your absence? A. Mr. Papineau acts in my absence. When the orders are given and the work is progressing, Mr. Bridges or Mr. Deans acts in my absence. Q. Do you supervise or arrange for the buying of steel, wood, engines, boilers, winches, pumps, deck auxiliaries and outfit for hull and machinery? A. Yes. I send my list to Mr. Papineau and he makes arrangements with Mr. Doutre at Ottawa. Sometimes he makes changes in the quantities if he believes too much or not enough is ordered. We do not always get what we order. Q. Do you have vessels tried on a measured mile for speed, for coal consumption and performances generally? A. Yes, we have made trials of the *Vercheres* and the *Leamington,* the *No. 21,* and the *Maisonneuve,* on a measured mile. Q. Do you personally supervise the tests? A. Yes, with the assistance of Mr. Bridges and Mr. Deans. Q. Do you work piece work on any parts of the construction of vessels? A. No. Q. Is there any instruction from the government against working piece work? A. I do not know of any. Q. Have you any means of knowing how much work men turn out, saw platers, riveters, caulkers, drillers and carpenters caulkings? A. No. Q. Is the men's work for the day tallied up at any time as a check of what they are doing? A. I do not know. This is not my business. I have no authority on that subject. Q. Is there any time allowed for punching time-clock? A. Five minutes at noon. Q. Is there any time allowance for men to wash up before knocking off? A. No. Q. Is there any time allowance for men to return tools to store room before knocking off? A. Five minutes at six o'clock. Q. Do you curtail working hours during winter months? A. Yes, one hour, from seven to five instead of seven to six. Q. Do you lay off the out-door men for bad weather? A. No. Q. Is any record kept of time lost through bad weather? A. No. Q. What action do you take when a foreman reports a man for insubordination, bad time keeping and misbehaviour? A. I send the foreman to report to Mr. Papineau. Q. Do the accountant, timekeeper, paymaster and storekeeper get their instructions direct from you? A. No. The department of cost gives them orders for the disposition of the work, that is to issue the job numbers to the different departments. Q. What record of scrap is kept as a check on the ordering of material? A. The orders to the store are to give a new piece for different machine or tools just when men come back with the old parts. When there is some steel ordered for construction this steel is charged to the store and the requisitions charging the part or piece to the job number. Q. How is scrap steel, iron, copper, etc., disposed of? A. I have nothing to do with that. Q. Do you ever take means to find out the weight of scrap steel left in construction of a boat? A. No. Q. How is the record of weight of rivets kept? A. There is no record kept. It is only in the requisition in store. Q. How is the record of service bolts kept? A. The same thing, they are charged to each construction. Q. Are the disused rivets returned to the store and credited to the ship? A. No. They remain in the department for other construction. Q. Are service bolts rescrewed and used again or scrapped? A. Yes, they are rescrewed and used again. Q. Is there any record of tools given to the men kept? A. I do not know of any. There is no standing order to that effect. Q. Is there any record of the tools returned by the men kept? A. Pneumatic tools must be returned every night at the boiler shop in the tool room, but no other tools need be.

The foreman sees about them. Q. Are tools returned to the store periodically for examination? A. Yes. Q. Have you a telephone system in the yard for calling up various departments? A. Yes. Q. Have you any fire brigade system? A. We have no system, but we have a captain. Q. What kind of fire protection have you got? A. We have two hose reels, 13 hydrants and hose in every important building with stand pipe. Q. Have you any arrangements for supervising w. c. and the time the men spend there? A. No. Q. Do you think the present system of clock timekeeping perfect? A. I think it does as good as any I know of. Q. On delivery of castings and forgings, are weights checked by calculation or otherwise before the invoice is passed? A. They are checked on the scale. Q. Do you check steel invoices for plates and angles by calculation for rolling margins before invoice is passed? A. That is by calculation. As for rolling margin, I report to Mr. Papineau and I do not know what action is taken. Q. Is timber all measured up and passed as to size and quality before invoices are passed? A. I think so. Q. What means do you take to insure that goods as supplied are as per sample? A. That is the storekeper's business. When special orders for construction come under my department I see to them. Q. Do you approve of the present system of purchasing goods in Ottawa? A. It seems to me that this is a slow way to get what we need. That is the only thing I know about it. Q. Can you estimate the cost of repair work? A. Yes, when the work is specified. With general overhauling of machinery, I cannot do that. Q. Do you ever get a list from timekeepers regarding the number of men working on the yard each day or week or month? A. No. I have absolutely nothing to do with the men. Q. Have you more work ahead of you this year than last year? A. No. Q. Do you know what iron work labour is costing per pound on hull construction? A. Yes. Q. Do you think you have a sufficient number of men for work on hand? A. Yes, we have about 150 men too many about the yard. Q. Have you any complaints to make? A. The only complaint I would mention would be about the authority I would like to have over the foremen and the men, and about the political interference. Q. Have you any recommendation to make as to the more efficient working of the yard? A. There is the question of handling the material and the authority of the men under me. Each foreman I may say should have means of keeping strangers out of the shipyard who are causing us great trouble. That is all I have to say. Q. Do you find any difference now from when Mr. Desbarats was here? A. It is no better nor worse. We have the same difficulty with political patronage. Q. Were those 50 painters fired for political reasons? A. I cannot say, because I had nothing to do with the matter. When I see men in the shipyard I do not know whether they are working for us or not.

MR. D. CHAMPAGNE (PAYMASTER).

Q. What is your name? A. D. Champagne. Q. How long have you been working in the yard? A. 28 years. Q. How long have you had charge of your department? A. 8 years. Q. Where were you employed before coming to the yard? A. I have always worked in the yard. Q. What kind of work were you doing there? A. I was assistant timekeeper and assistant storekeeper previous to my present position. Q. What is your age? A. 43 years. Q. What authority have you regarding employing and discharging men in your department? A. I have no authority. Q. Are the men in your department permanent employees? A. I have only one man and he has only been with me a short time. I had to get a new man on account of the extra work due to paying the men with cheques instead of cash. Q. How do you get a new man when you need one? A. I have to go to Mr. Papineau. Q. Who do you get your instructions from? A. I refer to Mr. Papineau in reference to the yard paying. I also pay the men on the ship channel fleet and this is under Mr. Forneret. I go out once a month and pay the fleet in the summer time, this takes from two to three days as I have to go from Montreal to Crane Island. Q. Who takes your place when you

are absent? A. Nobody takes my place and nobody has authority to sign pay cheques except myself. Q. Do you sign the book? A. No. Q. Have you any interference from other departments or officials with what you consider the proper running of your department? A. No. Q. Have you any changes to suggest in the running of your department by which you can get better work of your men without additional expense to the government? A. None. Q. What are your duties and responsibilities? A. I have to pay all the men in the yard twice a month. I have to pay all the men on the fleet which is about 900 men and amounts to about $60,000 per month, once a month in cash. I pay the yard in about half a day while it takes me about three days to pay the fleet. The men on the fleet have to sign the pay roll in my presence and the captain of the boat. Men who can't write make a mark and then I sign the pay roll, the captain signing as witness. I have to check all the pay rolls each pay. I go to the bank and check over the returns with the bank after each pay. The pay for the yard and fleet is deposited in the bank in my name and I have to account for the full amount. I make out reports regarding this to Mr. Papineau. Q. How many men have you under you? A. One. Q. How do you pay the men? A. I pay the yard by cheque for each man. I go to the office in each department and the men come there for their pay. I pay about 100 men in 15 minutes. Q. Are you responsible for the correctness of the pay-roll? A. Yes, regarding the amount of each cheque. Q. How long does it take you to pay all the men? A. Four hours. Q. Do you go around to each department to pay the men? A. Yes. Q. How do you do in the case of overpay or under pay? A. Sometimes it stands till next pay and sometimes Mr. Papineau issues a cheque in case of underpay. Q. Do you pay the office staff? A. Yes. Q. How are they paid? A. I get cheques from Ottawa once a month. Q. Do you issue any cheques for invoices? A. No. Q. Have you any petty cash account? A. No.

MR. PAPINEAU (DIRECTOR).

Q. How long have you been employed in Sorel Yard? A. Since February, 1908. Q. How long have you been Director? A. I have been Director for 2 years, next May. Q. What was your previous employment? A. I was a civil engineer with the Department of Public Works, and before that with the Department of Railways and Canals. Q. What are you professionally? A. A civil engineer and land surveyor. Q. Do you take direct charge of the drawing office staff, approve dimensions of vessels building, fix sizes of engines, boilers and auxiliaries, supervise the designs as to the form of lines, details of construction, stability, carrying capacity, scantlings, etc.? A. No. I look after the general direction of the shipyard, finding about the needs and requirements of the works. I look to the employees, hiring them and discharging them, and supervising generally. The technical part I am not supposed to look after in all details. I have a general knowledge of what is being done. The draughting office prepares the technical work. If mistakes were made in the draughting office, it would naturally follow that the whole of the work would feel the result of such mistakes. Q. Do you engage heads of departments, foremen and workmen, and discharge them personally? A. Heads of departments as a rule are engaged upon the recommendation and approval of Ottawa. As it happens, since I have been here, lately one foreman gave his resignation and another one was dismissed, both were appointed by Ottawa, and in that case I had nothing to say in the matter. Dismissals come from the deputy minister in Ottawa. The reasons for dismissals are not given. Q. Do you personally supervise the construction of hulls, machinery auxiliaries, etc.? A. No, not personally. Sometimes I go around the sheds during construction, in the machine shops, etc. Q. Do you supervise the launching of vessels, hauling boats on slips, etc.? A. I authorize the work of hauling or launching vessels. I am asked about this being done and I authorize it. Q. What is the heaviest boat you can slip? A. I think we can dock about 1,000 tons or a little over. That 'No. 10' we built on the slip was about that.

The upper part is a little flimsy, still we had no trouble about it. Q. Do you take stock annually? A. No, not annually. Q. Have you at any time made valuation of the yard, appliances, tools, buildings, etc.? A. I thing we had a kind of rough estimate. I have not done it myself. Q. Do you make an annual report of work done, work on hand and money spent for Ottawa? A. Yes. Q. Do you ever compare the amount of work done with the expenditure of the yard, to find out if the work has been carried on economically? A. Yes, when the construction is finished. We inquire from the cost department to find out what is charged and how much money we have. We want to see how we are getting along. For instance, that small tug we are getting repaired now, we know how much everything will cost. Q. Do you make up the cost of proposed new vessels beforehand? A. It has been done this way, that we compare with former prices for vessels of the same kind and what the cost was to build them, and we base on this an estimate of what we should ask. Q. Do you keep proper track of the cost at various periods during construction, so as to be able to pick up any leakage? A. The cost department looks after the expenditure and we ought to be able from the cost to find out what any job has cost, and by that we see whether it is costing too little. There has been a drawback to the cost system in this way, that the indirect cost has to be figured and added to the expenditure. Now it takes at least five weeks before the indirect cost of one month is figured, after the month is run out. They have to bring in all the accounts, bring the distribution of time, and then charge each shop with its share, and then bring that together again to find what the indirect cost as compared to the whole of the work is. Then find out what the labour has been for the job, and apply the indirect cost for each month according to the month in which it has been made. Before that calculation is finished, it is almost 5 weeks after the month is finished. In that way we would want the cost to be ready at the end of the week to give us a result. For that we would have to establish for each month for past years what the indirect cost is, say January, February or March—whatever work was done in one of these months would be charged indirect, at the rate established beforehand at the end of four weeks, and if $400, say, has been spent on a job, add 30 or 40 per cent, and find that the job has cost us $520 or thereabouts. Q. On completion of a vessel do you compare the actual cost with the estimate and the time taken to build? A. We do it between ourselves, not in a formal manner. When a vessel should be finished in May, for instance, and it is finished only in September, we know we are behind. Q. What are your daily duties? A. I have to asnwer any correspondence from Ottawa with regard to work. I have to supervise requisitions, approve or disapprove them and check the quantities that we are asked to purchase. One of my duties is to answer applications for work. I do that myself. Men come with letters from deputies and they would feel aggrieved if proper consideration was not given them. This has been a great weight on my office. Q. What are your hours of attendance at the yard? A. I have no fixed hours. I am here as a rule from 9 till 5 p.m. Q. Who has power of acting in your absence? A. The assistant director for most things. The checker acts for certain things. He looks after the discipline of watchmen, time-clocks, etc. Q. Do you supervise or arrange for the buying of steel, wood, engines, boilers, winches, pumps, deck auxiliares and outfit for hull and machinery? A. We arrange in this way, that for the steel wanted we get a list of materials prepared in the draughting room of the technical department. As to machines, a list is supplied of what will go on a vessel. For the machinery, for instance, we decided together with the foreman or the assistant director what should be purchased; we do the choosing. The requisitions are made and sent to Ottawa. There they either approve of buying the machinery or disapprove. If they approve of buying, they ask for prices, generally on our specification. When they have the prices, they place the order or sometimes ask for tenders. When there is a question as to price of machinery, and the suitability of same, these things are referred to us. In that case we report on what is best suitable. Q. Do you buy timber, logs, etc., here? A. This is

done in Ottawa. Formerly it was all done here until 1908, when they introduced a purchasing department in Ottawa. From that time they do the purchasing there except for small things. We buy few logs here. Q. Do you have vessels tried on a measured mile for speed, for coal consumption and performance generally? A. We generally make a trial to find the speed of a vessel. We have a measured mile here. As a rule we have not much time to make the trials, for there is always a hurry to get the boats away. Q. Do you personally supervise the test? A. Yes, I have done so with the *Montmagny*. Q. Do you work piece work on any parts of the construction of vessels? A. No, we do not. Q. Is there any instruction from Government against working piece work? A. Not that I know of. Q. Have you any means of knowing how much work men turn out, say platers, rivetters, caulkers, drillers and carpenter-caulking? A. The only way would be by looking over the time charged to each job number. The men are not supervised during the day by anybody. Each foreman is supposed to see that each man does proper duty. We have a man who goes around and reports to the chief of construction, what the gangs are doing, and it was the intention to have him report in detail, but this is not in full swing yet. Q. Is the men's work for the day tallied up at any time as a check of what they are doing? A. Each day the time is charged to the different jobs. Q. What supervision have you over all the various repair jobs now going on? A. It is the return of the job numbers and the information from the foreman occasionally about his getting on with repairs to such boiler, or putting together an engine, etc., which supply us in that case. I do not go personally now and then to supervise the works. Q. Is there any time allowed for punching time-clocks? A. There is an allowance of 5 minutes before 12 at noon, to give the men a full hour for dinner. The whistle blows at 5 minutes to 12. This allows the men 5 minutes to punch their time and have an hour. Q. Is there any time allowance for men to wash up before knocking off? A. No, there is no time allowance. Q. Is there any time allowance for men to return tools to store room before knocking off? A. Yes, they get about 10 minutes to get their tools in. We do not object to their taking that time. They have heavy tools to carry back, for instance, pneumatic tools. Q. Do you curtail working hours during winter months? A. Yes, it is 9 hours instead of 10 hours from November till March. Q. Do you lay off the outdoor men for bad weather? A. No. Q. Is any record kept of time lost through bad weather? A. No. Q. What action do you take when a foreman reports a man for insubordination, bad timekeeping and misbehaviour? A. I suspend him. In some cases the man is dismissed. When the men have actually been dismissed I do not think I will take them back. Q. What authority do you give your assistant for dealing with matters pertaining to the working of the yard generally? A. He has authority to distribute the work and, to a certain extent, determine what particular should be begun and tell the men, when ready, to go on with such a work. He has a great deal of authority on the foremen, who consult him on all technical points. Q. Does your assistant have a free hand? A. Oh yes, as regards the employing and discharging of men. In case of insubordination he could suspend a man, but he would report to me. He can suspend but not discharge a man. Q. Do the accountant, timekeeper, paymaster and storekeeper get their instructions direct from you? A. Yes. The accountant to a certain extent reports to Ottawa through me. In some cases they act direct. Q. What record of scrap is kept as a check on the ordering of material? A. There is no record daily kept of that. Q. How is scrap steel, iron, copper, etc., disposed of? A. It is sold upon offers made to the department at Ottawa. We send a list of what we have and they ask for prices. This is done about once a year. There is no regular date for this sale. Q. Do you ever take means to find out the weight of scrap steel left in construction of a boat? A. No, we do not. Q. How is the record of weight of rivets kept? A. The rivets are called for upon requisitions, and charged to the job. They are taken away in small quantities. What is not used ought to be returned, but I cannot say positively that they are. Q. How is the record

of service bolts kept? A. In the same way as they are charged. They ought to be credited when the construction is finished, and charged to the next construction with a discount. Q. Are service bolts rescrewed and used again or scrapped? A. Yes, when they are thrown away they are rescrewed and used again. When they are not spoilt they are used until they are unfit. They are passed through the screwing machine and used again. Q. Is any record of tools given to the men kept? A. They are checked off the list. If a man should not return the tool he is asked for it, but no record is kept. Q. Are tools returned to the store periodically for examination? A. Yes. We have a department in the machine shop that looks after any tool that has become blunt, and it is run through the machine shop. No tools are sent to the store except in case the men are short of a new tool, when they will borrow from the store and return it there when through with it. The tools are always used until quite finished. Q. Have you a telephone system in yard for calling up various departments? A. Yes. Q. Have you any fire brigade system? A. We have no organization. The foreman of the pipe shop has to look after that and his men are supposed to form into a brigade and help. We try the hose, but not in winter time as it would become frozen but in summer time. Q. What kind of fire protection have you got? A. This consists in a few Babcock extinguishers in the buildings, and we have two hydraulic pumps driven by motor, and a spare pump which can be driven by steam. Q. Have you any arrangement for supervising w.c.'s., and the time men spend there? A. No, we have no regular system. Q. Do you think the present clock system of time-keeping perfect? A. Well, I do not think it could be called perfect. There is a great inconvenience. The clocks seem to be affected by the weather in winter time. We find them getting out of order, the one outside. Sometimes the figures that show the time seem to have stopped, probably because the clock is stopped and remains slow or behind time. They will show, say 5 when they should show 7, etc. Q. On delivery of castings and forgings, are weights checked by calculation or otherwise before the invoice is passed? A. No. They are compared with the drawings and if they suit, very well. Q. Do you check steel invoices for plates and angles by calculation for rolling margin before invoice is passed? A. Sometimes we do, but not in every case. Sometimes we compare the weight of the forgings with the invoice, but not always. For overweight we do not deduct anything. The invoices are checked; we run the list through to the office. The contracts for steel are made in Ottawa, but I do not think there is a clause as regards the rolling margin. Q. Is timber all measured up and passed as to size and quality before invoices are passed? A. Yes. We buy the round logs. We pay for these at the rate that we pay for a log equal to the square. We take the full diameter and deduct a quarter from it. We take the middle diameter and deduct a quarter. For instance, a 16-inch diameter will give a square log of 12 inches, and we do not pay for the slab. Q. What means do you take to ensure that goods as supplied are as per sample? A. We do not always have samples. For cotton waste we get samples and compare. For oakum we get samples. Our checker makes the comparison with all the samples we get. If the checker has doubts about values we ask a competent foreman to compare with what we have had before to see whether it is the right thing. We send samples to Ottawa which are not returned. Generally we have some of the old stock to compare with.

They send us a sample from Ottawa and leave it here as a standard, for instance, when they buy brooms, they send us one for a sample. When no sample is sent from Ottawa, we find out by comparing with what has been sold to us before. When we find the goods inferior, we advise Ottawa and they make a claim upon the company selling the goods.

Paint is always bought at Ottawa. I think they buy on samples. They do not always send us samples of white lead. Lately we get some yellow paint and it must have been inferior, because when using it we used three times as much oil to make it useful. We reported to Ottawa. They insist on pure paint when it is not pure paint.

Q. Do you approve of the present system of purchasing goods in Ottawa? A. I have no objection to that system. For certain things it is all right. For other things it is a little slow. Oils, paints, bolts, nails, etc., are things which they can buy easily and probably a little cheaper by buying for the whole Dominion. They get better prices from the manufacturers who find it worth their while to give low prices for good customers. Q. Can you estimate the cost of repair work? A. I would not venture out in that direction. Q. Do you ever get a list from the timekeeper regarding the number of men working in the yard each day or week or month? A. I know by the lists every evening. I would know if their number was increasing because I know of all men coming in to be appointed. As the works get on towards construction we attend to dispensing with men. When work is getting scarce the foremen will tell me, 'We have too many men and will want less in a few days.' 80 or 90 men, boilermakers, will be dismissed shortly because new work is not plentiful. In March we stop the work of painters every fortnight because work is scarce then. Q. Have you more work ahead of you this year than last year? A. This year we have less. Q. Do you know what iron-work labour is costing per pound on hull construction? A. No, we have no figures on that. Q. Do you think you have a sufficient number of men for work on hand? A. At present, we have fully enough. Q. Do you think you have too many men for work on hand? A. Not just at present, but in another 3 weeks we will have too many. We are paying off 80 or 90 just now. Q. If so, about how many? A. We have about 950 men now, and at the end of April we should get them down to 750, which would mean that we have about 200 too many, although I do not say that we have 200 too many now. Q. Have you any complaints to make? A. The worst thing is the pressure from outside to force men into employment against our present needs. If a man goes, for instance, 6 hours before I know there are 2, 3, 4 or 5 men offered to take the place. Q. Do you take upon yourself to discharge the men? A. This could be placed in the hands of one of the officers. At one time it was decided that the time-checker should look after that part. Q. Would it not be better if each foreman would employ his own men? A. There might be drawbacks to that. The foreman is the best judge of the worth of the men at work, because he has them under his eyes. At the same time, the men are related or friends of so and so, and whenever there is a job, well paid, the foremen are subjected to that outside pressure. Even now, this is tried. The foremen are asked to look after such and such an employee, to get him a good job and good pay, and to even get others out to make way for that man. Q. Do you fix the men's rate of pay? A. Yes. We had a kind of schedule of prices arranged from such a price to such a price, and as the men came, unless they are known to be very good men, we start them at the lower price and work them up to a higher rate as they become more competent for our work. A young man comes in as an apprentice, say at 50 cents a day, the starting price, and works up until he earns $1.25 a day, and up again until he is put at the rate paid a regular mechanic. There are few apprentices here in the machine shop, for as soon as they know the trade a little they go. They are supposed to serve three years. Q. Do you bind the apprentices to a certain number of years? A. A boy comes here and is supposed to serve 5 years. That boy is to be paid so much money and raised each year, but he must serve 5 years. These men in the machine shop are somewhat under these lines. They began at 50 cents and worked up. After that we give them good wages. We have formed some pretty good men. Q. Have you any recommendation to make as to the more efficient working of the yard? A. I think we would get better results if we could give better wages and cut down the number of men employed to that absolutely required in each shop. We would get a better class of people. There are a good many men who have left Sorel and gone elsewhere, who would be quite willing to come back if they could get good pay. The men who are willing to stay here are not the best of each kind. I may be mistaken though. The deputies recommend men rather recklessly, and they have a way of

imposing such men much against my authority and against the authority of the foreman. Q. Do you sometimes get an inferior man because of political backing? A. Well, sometimes we feel we have men we would not pick out for ourselves, and we are forced to employ them. If we had a free hand we would be better off. The right way would be, for instance, if we wanted two or three good carpenters; the patronage, of course, rests with the deputies; they would be notified of our need of these carpenters; they would pick out, among the best, two or three first-class men and send them to us, not send 20 applications and let us pick out without a chance of getting the right men, the rest of them fighting among themselves and going back to the deputies and reporting that 'we have been there and we cannot get any work.' For instance, in January last my office was filled with about 50 men with letters. It took me over two hours to look over that list and say, 'no room, can't be done.' Sometimes we would take one man, the others would say to their backers, 'they have taken so and so and they would not take me.' This is a loss of time and it is a bother for deputies. They do not get much credit and we do not get any at all. I might be better employed otherwise. If the men come with a letter from the deputy, that letter is addressed to me personally, I have to be very careful, I must read it carefully, give it great consideration, and give the bearers some kind of reason for not taking them on at once. They believe they should start right away. We give them as good an excuse as we can. If we cannot say 'yes' for the present, they will come the next day, the next week, and will return perhaps 10 or 12 times. Some of them do not live far and are always here. It is all a great loss of time and a great bother with no good result. There is also the difficulty about the men living across the river. We have a few who, after punching their time, go across and spend the morning idle and come back in time to punch the clock again. They do that without being seen by the foreman, but some have been caught and have been discharged, and I have never taken them back. However, there is no particular way of closing the yard to prevent that sort of thing. We have to have watchmen all the same with automatic fences.

This concludes Mr. Papineau's evidence and the investigation.

APPENDIX E.

LIST OF TIME CLOCKS AND LOCATION.

No.	Clock.	Located.	In charge of
1	1-200	Machine shop	Leon Dessert.
2	401-600	" "	Adel. Bouchard.
3	201-400	Sawmill	Cuth. Champagne.
4	601-800	Shed No. 9 in yard	Ad. Joubert.
5	801-1000	" " " "	John Hayden.
6	1001-1200	Boiler shop No. 2	Treffle Grondines.
7	1201-1400	" " " 1	Wilf. Davignon.

DISTRIBUTION OF MEN ON CLOCKS.

No. 1 Pattern makers, blacksmiths, and machinists.
" 2 Carpenters, saw mill, labourers, painters and asbestos.
" 3 Carpenters, electricians and labourers.
" 4 Labourers.
" 5 Machinists (fleet), boiler makers (fleet), and labourers.
" 6 Boiler makers.
" 7 Boiler makers, steam fitters and mould loft.

NOTE.—There are about 150 men on each clock.

APPENDIX F.—*Buildings Plan (Not printed.)*

APPENDIX G.

CONTRACT FOR ELECTRIC CURRENT.

THIS INDENTURE made in duplicate this first day of October, in the year of our Lord one thousand nine hundred and nine.

BETWEEN the Sorel Electric Company, a body politic and corporate having their chief place of business at the City of Sorel, Province of Quebec, in the Dominion of Canada, represented herein by A. E. Pontbriand, President of the said Company, hereinafter called 'The Company,'

Of the First Part;

And HIS MAJESTY KING EDWARD the SEVENTH, represented herein by the Honourable Louis Philippe Brodeur, His Majesty's Minister of Marine and Fisheries for Canada,

Of the Second Part.

WITNESSETH that in consideration of the covenants and agreements on the part of His Majesty hereinafter mentioned the Company covenant and agree with His Majesty as follows, that is to say:—

1. The said company shall supply to the Government Workshops at Sorel aforesaid, the electric current for the operation of the several machines, appliances and for the lighting at and in the said Government shops and shipyard;

2. The electric current so supplied by the said Company must be such as to produce at any time and at all times as may be required by His said Majesty as aforesaid, four hundred and fifty electrical horse-power, and for the purpose of such measurement seven hundred and forty-six watts will constitute one electrical horse-power.

3. His Majesty to have the privilege of using power in excess of that contracted for up to twelve and one-half horse-power, for which no charge will be made, but should the power consumed exceed the said amount of twelve and one-half horse-power, His Majesty to purchase whatever additional power may be required for his use in units of not less than twenty-five horse-power, at the price hereinafter mentioned.

4. The said power shall be supplied by the said Company at the switchboard where directed by the officer delegated for that purpose by the Minister, in the form of a two phase thirty cycle alternating current of about two thousand two hundred volts;

5. It is also understood and agreed that the Company shall not be in any way responsible for the transmission or control of electric power covered by this Agreement beyond the point of delivery at the primary terminals of the switchboard or transformers of His Majesty at the voltage and frequency called for in clause four (4) of the Agreement;

6. That His Majesty, represented as aforesaid, shall so arrange its use of power furnished under the terms of this contract that the power factor of its load shall not be less than 90 per cent, and for the purpose of determining whether His Majesty is using more power than he is entitled to under the terms of this contract, if the power factor is less than 90 per cent, it shall, for the purpose of such determination be calculated on the basis of 90 per cent power factor;

7. It is understood and agreed that the said Company shall supply the said current during the twenty-four hours of the day;

8. Meters to record the amount of power used will be installed by the said Company, at their own cost, at the said Government workshops, and the said Company shall have right of access to said meters for the purpose of observing the same. Said

meters shall be calibrated by the said Company at such times as may be deemed necessary: provided always that His Majesty may, at any time, have said meters calibrated by competent persons, by giving at least two days written notice to the said Company of his intention to so calibrate them;

9. It is understood and agreed that the said Company shall take all possible care to prevent any interruption in the delivery of the current hereby contracted for, it being understood that should any interruption occurring through any cause beyond the control of the said Company, such interruption shall not vitiate the present agreement, but if the interruption of power should last for two hours or more, there will be a proportional rebate in the rental hereinafter determined. No account will be taken of interruption of power for a period or periods of less than two hours.

10. The present indenture shall remain in existence during a period of five years to date from the first day of October, one thousand nine hundred and nine, and may be renewed at the option of the party of the second part for a further period of five years by giving notice in writing six months previous to the expiration of the contract to the said Company to that effect, always under the same terms and conditions as herein stipulated.

11. Should the said Company fail to carry out all the provisions and stipulations of the present Agreement to the satisfaction of His said Majesty, it shall be lawful for His said Majesty to cancel the same by giving a three months' written notice to that effect; and in case of such cancellation, the said Company shall have the right to be paid a proportion of the contract price hereby provided for up to the date of such cancellation and no more; being expressly understood and agreed that the said Company shall have no right to claim any damage from His said Majesty on account of such cancellation;

12. And for the proper and efficient carrying out of the several provisions and stipulations of the present Agreement by the said Company, His said Majesty shall pay the said Company at the rate of Thirty Six Dollars and Fifty Cents per annum per electrical horse-power for four hundred and fifty horse-power, being a yearly sum of Sixteen thousand four hundred and twenty-five dollars in lawful money of Canada, payable in monthly payments of Thirteen hundred and sixty-eight dollars and seventy-five cents, to be reckoned from the said first day of October, in the year one thousand nine hundred and nine.

13. Should any difficulty or difference of opinion arise as to the interpretation or proper carrying out of the present Agreement, the decision of His said Majesty represented as aforesaid, shall be final and conclusive;

14. In this Agreement and wherever the Company is mentioned, it shall be taken and construed as binding on themselves their successors and assigns; and whenever and wherever His Majesty is referred to, it shall be taken and construed as binding on His Majesty, His Heirs and Successors as represented by the Minister of Marine and Fisheries for the time being.

IN WITNESS WHEREOF, the parties hereto of the First and Second parts have hereunto set their respective hands and seals the day, month and year first above written.

Signed, sealed and delivered by the Company in the presence of:

Signed, sealed and delivered by the Minister of Marine and Fisheries in the presence of:

SUB-REPORT RE SOREL SHIP YARD—No. 2.

BY MESSRS. PRICE, WATERHOUSE & CO.

MONTREAL, April 24, 1912.

The Public Service Commission, Ottawa—

GENTLEMEN,—In accordance with your instructions we have made a preliminary investigation of the books and accounts of the Sorel Shipyard which are kept at the offices in Sorel, and we now have the honour to submit the following report which contains an outline of the present system and methods and the result of certain tests which we have made of recent transactions.

The Sorel Shipyard is situated on the banks of the Richelieu river opposite the town of Sorel. The greater part of the land on which the works are erected is, we are informed, held under lease from the McCarthy estate at an annual rental of $1,200.

The work carried out by the shipyard may be grouped as follows:—

(*a*) The construction and maintenance of the dredging fleet operating in the St. Lawrence ship channel.

(*b*) Miscellaneous construction and repair work for other Government departments and small repair work for private individuals.

(*c*) Supplying the dredging fleet during the season of navigation.

The operations of the yard are under the direction of the Marine and Fisheries Department in Ottawa, which purchases all materials and supplies, with the exception of certain small purchases which are made locally. The invoices for materials purchased are, as a rule, received in Ottawa and are forwarded to Sorel, where they are certified as to the receipt of the goods and approved, after which they are returned to Ottawa and paid by the department.

The work at the yard is in the charge of a director. This position is at present held by Mr. L. G. Papineau, whom we understand has acted in this capacity for about three and a half years; he is assisted by Mr. H. A. Terreault, who acts as assistant director.

Your instructions to us laid particular emphasis on the necessity of a thorough inquiry into the efficiency of the labour, and the number of men employed at the plant, and in this connection you asked us to co-operate with the investigators, Messrs. W. S. Jackson and T. H. Schwitzer, who are reporting to you upon the operating conditions. We have furnished the investigators with what data they required, and our representatives have rendered them every assistance possible.

PAY ROLL SYSTEM AND METHODS.

The Director engages and discharges the employees and fixes the rates of wages. We would mention in this connection that we have been informed that cases have frequently occurred where men discharged by the heads of departments have later been reinstated in their former positions on application to the Director. We are bringing this condition in regard to the engagement of labour to your notice at the outset of our remarks upon the pay roll system, for the reason that it has an important bearing upon the attitude of the employees towards the heads of the departments and consequently on the efficiency of the work performed. You will readily realize that if

the head of a department, whether operating or clerical, has not the power to discharge a man whose services are unsatisfactory, he can have no proper authority or control over his staff.

As a result of our investigation of the pay roll methods, and of incidents which came to our notice in the course of our work, we are of the opinion that the present conditions are unsatisfactory, more especially in the following respects:—

(*a*) A number of men are not punctual in reporting for work and they frequently leave work before the proper time, and deductions from their wages for time so lost are not always made. We noticed that at the noon hour it was a common occurrence for men to punch the clock at least ten minutes ahead of time, and in the evening it was not an unusual sight to see a line of men forming at the doors from fifteen to twenty minutes before the closing hour.

(*b*) Specific instances have come to our notice, both as a result of our independent inquiries and from visits to the shops in company with your investigators, where the men have been found idling.

(*c*) There are numerous indications that the foremen exercise no proper authority over their men; this lack of authority may result either from the system of engagement or from the incapacity of the foremen themselves.

(*d*) The pay roll system, which appears to have been well designed originally, is not being properly carried out at present.

Number of Men Employed.

The following is a comparison of the men employed on the shipyard pay roll in the months of March, 1911, and March, 1912:—

	1911.	1912.
Employees in the yard and shops	855	874
Foremen	10	10
Draughtsmen	10	11
General staff	4	4
Office staff	6	6
Stores	11	12
Cost department	5	6
Watchmen	7	7
Miscellaneous help	8	7
	916	937

Engagement and Discharge Slips.

When men are engaged or discharged, or wages increased, authorization slips are made out by the Director. These authorizations are, however, written on odd pieces of paper, and as there is no system of filing them we could make no satisfactory verification that the rates paid had been properly authorized.

A printed engagement slip should be made out in triplicate, one copy being retained in the Director's office, the second copy being sent to the accountant and the third to the timekeeper's office, and similar slips should be used for increases in pay or discharges.

Time Clocks.

With the exception of the office employees, store-keepers, foremen and a few yard men, all employees are supposed to punch the time clock cards.

There are seven clocks, all of the same design, viz., 'Premier Punches,' manufactured by the Toronto Electric Works Company. The men record their time four times a day in the presence of the punch-keepers, who report twice a day to the timekeeper on rough slips of paper the number of cards not punched or punched late. The punch-keepers are workmen who receive twenty cents per day extra for attending at the punches.

The time clocks are not kept in good working order and the punch records made on the cards are often indistinct and blurred. In the pay roll, February 1 to 15, 1912, the punches Nos. 1, 2, 3, 4, 6 and 7 were out of order at some time during the period, with the result that it was impracticable to decipher the record of time of the men working in the various departments punching on these clocks. Punch No. 3 was also not in good working order during the succeeding pay roll period, February 16 to 29, 1912.

Two minutes after the hour at which the men are required to enter the shops the punches are supposed to be closed: for example, if a workman were to arrive two minutes after seven o'clock, which is the hour for starting work in the morning, he would find the punch closed (if the rules in regard thereto were strictly carrried out) and it would be necessary for him to 'punch' in at nine-thirty o'clock, in which case he would only be credited with three-quarters of a day's work. Further, after the punches are closed they are supposed to be locked by the punch-keeper and the keys handed into the time-keeper's office. We find, however, that the punches are not regularly closed in accordance with the rules and that the punch-keepers often retain the keys in their possession.

Under any proper pay roll system the time-clock cards are sent to the time-keeper's office, and the pay roll is either made up from them or they are used to support time reports received from other sources. Under the system now in operation at the plant the time cards are handed into the time-keeper's office at the end of each pay roll period, but so far as we could find out the time-keeper does not examine them or compare them with his time records.

The time-keeper's office is not sufficiently large to afford filing accommodation for the cards, and it would seem that after two or three months the cards are sent upstairs to a general storage room. The cards in this room were found to be lying about in a most disordered condition and it was found impossible to obtain all cards which are required.

In order to test the methods of the pay roll department, we examined over 8,000 cards, representing the pay rolls of the months of February, March and April in the years 1911 and 1912 and also part of the month of November, 1910. We desired to make some further investigation into the pay roll of the year 1910, but found it was impossible to obtain any satisfactory proportion of the time cards in any one pay roll period.

Time-keeper's Records.

The time-keeper's records are written up from information received from the punch-keepers who, as already stated, report each day on loose scraps of paper the names of the men who are not entitled to full time. These pieces of paper are not filed in any systematic way in the time-keeper's office and it is impossible to go back and state definitely whether the time-keeper's records are in accordance with the reports received. We append hereto (Exhibit 1) a memorandum of errors in entering the punch-keepers reports in February and March, 1912, which have resulted in an overpayment of wages. There are doubtless other errors of a similar nature which cannot now be traced owing to the unsatisfactory state of the records.

The time-book records kept by the time-keeper are somewhat elementary in form and are written up in pencil. They contain the names and identification numbers of the employees on the pay roll, with spaces representing each day of the pay roll period and columns for the total days worked, the rates and amounts due. If no report is received from the punch-keeper that a workman is not entitled to a full day's time, the time-keeper draws a vertical line against that man's name in the time book, but if he receives a report that the man has been absent for a day, or fraction thereof (only quarter days being considered) he makes notations in the spaces provided by means of crosses or otherwise. At the end of the pay roll period the time-keeper enters in the total column the total days worked by each man.

In the periods mentioned above, in which we examined the time-clock cards, we also checked the clerical accuracy of the footings making up the total number of days shown on the time-keeper's records. A number of errors were found, as will be seen on reference to the appended memorandum (Exhibit 2). As these errors showed there had been some overpayment of wages, the overpayments in March, 1912, were pointed out by us to the time-keeper and an attempt will be made to recover these by deductions from future wages. As already pointed out, it is impracticable to ascertain whether there were similar errors in preceding months.

As an example of the careless methods in the recording of wages, we might mention that we came across a case of a workman who was credited with time for two weeks although he had not been in the employ of the yard during the entire period. His time was made up by the time-keeper in the usual way, but when the wages came to be paid the man could not be found, and not until then was it discovered that he had left the employ of the yard.

Overtime.

Overtime in the shops is authorized by the foremen, who report the overtime to the time-keeper. A few other employees, such as electricians, yard labourers, engineers, &c., receive overtime allowances by reporting to the time-keeper, without authorization. Overtime is posted to the time-keeper's book and a report is handed by the time-keeper to the cost department for the distribution of the charges.

It would appear to be the exception for the foremen to be present when overtime is worked, and therefore some additional check should be instituted on the overtime worked in the shops and a more systematic method adopted with regard to the handling of the overtime of the other employees mentioned.

Pay Lists.

Pay lists are made out in triplicate from information contained in the time-keeper's time book. One copy is retained in the time-keeper's department and two copies are sent to Ottawa signed by the Director, time-keeper and accountant.

We tested the clerical accuracy of the pay lists for a period of three months and subject to two small errors, found them correct.

Under a proper pay roll system the accountant should be responsible for the accuracy of the pay rolls, but under present conditions the accountant merely affixes his signature to the pay list without any verification whatsoever.

Payment of Wages.

The amount of the pay roll, when completed, is telephoned to the Marine and Fisheries Department, which notifies Molsons Bank of the amount to be advanced thereupon.

Payment of wages is made by cheques, which are made out in the time-keeper's department.

The paymaster distributes the pay cheques in the presence of a witness, usually the foreman or clerk of the department, who is able to identify the man.

Fleet Pay Roll.

The pay roll of the dredging fleet is kept entirely separate from that of the yard pay roll, and is in charge of Mr. Forneret, who supervises the operations of the fleet. When the vessels are laid up in the yard, however, the crews ring up on the time clocks and the pay lists are made up in the same manner as those of the general works.

The payment of wages is made in cash by the paymaster in the presence of a witness, usually the captain or an officer of the vessel, who identifies the men, the

paymaster visiting each dredge. The paymaster signs a declaration before a justice of the peace as to the actual payment. The point is not quite clear as to why this formal affidavit is required in the case of the fleet pay roll, while the paymaster's is accepted as regards the yard pay roll.

We have not made any investigation of the fleet pay rolls beyond testing the pay lists with the reports received from the engineers of each vessel, which show the men employed. The system appears to be fairly satisfactory, subject to the remarks that the accountant should be in a position to certify as to the correctnesss of the wages and that full information should be kept as to the rates of wages, records of services, &c.

As will be noted later under the head of 'Cost Department,' daily reports are received from the foremen of the various departments showing the work on which the men are engaged. These reports are summarized and the total amount of wages charged to the different jobs is balanced approximately with the total wages paid by the pay roll department. If the system is carefully carried out it affords a valuable check as to the correctness of the wages paid, owing however, to the fact that the foremen's reports are not checked against the time book differences between the total as shown by the pay roll and the amount charged to the various jobs were found to exist. We would suggest that in future the foremen's reports should be checked against the time book.

MATERIALS AND SUPPLIES.

We append hereto an outline of the system followed in ordering materials and supplies, passing and approving invoices and handling stores (Exhibit 3). The system if properly carried out should afford a good check that all invoices paid by the Marine and Fisheries Department represent purchases made for the benefit of the yard and should prevent duplication of payments. The system also affords a satisfactory safeguard for the handling of stores, but in one or two essential features referrred to later, it is not being carried out as was apparently intended.

We have examined the duplicate invoices on file in the accountant's department for the year ending February 29, 1912, and find that with a few minor exceptions they have been certified as to the receipt of the goods. We have also examined the advices of payments received from Ottawa covering these invoices and have found them correctly recorded in the books. We have not, however, examined the actual receipts and cheques issued for the payments, which are on file in the Marine and Fisheries Department in Ottawa. We would point out, however, some miscellaneous payments for advertising, printing, stationery, &c., which were made by Ottawa were not represented by duplicate invoices on file and we would suggest that such invoices should be forwarded promptly so as to facilitate the distribution of the expense.

In order to determine whether the store-keeping system was being carefully carried out, we checked the requisitions for the issue of stores for the twelve months ending February 29, 1912, and as a result of our investigation into this department we would call your attention to the following points:—

(1) No complete physical inventory has been taken since January, 1905, and we are informed by the store clerk that no real attempt has been made since that date to balance the quantities of any materials or supplies on hand with the book records, and the stock ledgers have not been added for some time. Unless this is systematically done the information afforded by the stock ledgers as to the quantities on hand can hardly be considered of value and the failure to bring the records into accord with physical conditions may result in considerable loss of supplies.

A physical inventory is now being taken. The work was started about the middle of March last, but it is not expected that it will be completed for several

weeks. The store-keeper is in charge of the taking of this inventory, and has several men working under his direction, but the work appears to be proceeding slowly.

(2) A large quantity of timber is used, which is purchased f.o.b. Sorel or other points. The foreman of the sawmill informs us that he has entire control over the inspection of timber, either passing upon its quality at the point of purchase or after its arrival. He also states that if he inspects the timber at the point of purchase and it is floated down the river, which is the usual method of delivery, no systematic verification, either as to quality or quantity is made upon its arrival. The invoices for the purchases of timber are approved as to receipt and quantity by the sawmill foreman.

We would consider it desirable to make a more extended inquiry into the purchase of timber by examining the methods followed in awarding tenders, and also a further investigation into the question of passing upon its quality and the prices charged to the jobs.

(3) Where wood is required for construction in large quantities, timber is purchased and charged direct to the cost of the job and the cost of handling and sawing is subsequently added.

Such a system does not provide sufficient information as to the charges to construction accounts, and it should be changed in order that all timber purchased may be charged to a timber account which would be credited at cost with the lumber used and the job charged.

We have been furnished with reports of the operations of the sawmill, some of which show considerable shrinkage in the cut of logs and timber. As for example, in November, 1910, 22,957 feet of elm cut at the sawmill only produced 12,814 feet of lumber, and in December, 1910, 21,156 feet of elm produced only 11,568 feet of lumber.

(4) Certain purchases of coal are not handled through the stores department, but are charged to a fuel account on the cost department records. When such coal is used by any department requisitions are sent into the office containing an estimate of the quantity taken and the fuel account is credited with the values thereof. The credits to the fuel account are, however, made at prices in excess of cost, and this results in a considerable apparent profit on the handling of coal, and an excessive charge against operations.

We would suggest that the coal on hand be placed under the supervision of the store-keeper and charged out to the various departments at a price which will represent the cost of purchase and handling.

(5) From time to time the Director reports to the Marine and Fisheries Department an estimate of the scrap on hand. Tenders for the purchase are obtained in Ottawa and a copy of the contract of the successful bidder is forwarded to the Director.

When a purchaser takes delivery the scrap is weighed in the yard and a report of the weight is sent to the Director. The Director collects the money due and turns it over to the accountant for remittance to Ottawa.

This system does not afford a proper check and in future we would suggest that when scrap is weighed a report of the weight should be made out in triplicate, one copy being sent to the Director, one to the accountant and the third retained by the store-keeper. The accountant would then be in a position to pass as to the correctness of the amount of cash received in respect of scrap sales.

(6) On reference to the attached outline of the system of approving invoices you will note that the clerical accuracy of invoices is verified both by the store-keeper's department and the accountant's department. This duplication of work would appear to be unnecessary, and it would be better to place the entire responsibility for the verification of invoices on the accountant.

COST DEPARTMENT.

The Cost Department is in charge of Mr. J. W. Latraverse, who renders monthly statements to the accountant.

Requisitions for supplies issued by the store-keeper are received in the Cost Department and extended as to values. The requisitions are then copied into a day book, after which they are posted to the proper job number in the cost ledger.

The entering of these requisitions in the day book appears to involve an unnecessary amount of work, the only advantage apparently being that the total of the requisitions posted is shown. This information could, however, as readily be obtained by the use of an adding machine.

As already mentioned the Cost Department received daily reports from the foremen of the various departments showing the men engaged and the jobs to which their time is charged. Daily reports are also received in the Cost Department from the time-keeper's office showing the names of those who have been absent for a quarter of a day or more, and these reports are supposed to be checked against the foremen's reports and any discrepancies found investigated. The foremen's reports of the men's time are recapitulated daily by job numbers and at the end of the month the rates of wages are filled in and the amounts extended and posted to the cost ledger.

In order to test the accuracy of the work of the Cost Department we compared the material distribution slips and the foremen's labour reports for the month of February, 1912, and made a simlar test for about ten days in February, 1911. So far as we can determine from these tests the work in the Cost Department is being fairly well carried out. At the present time it would seem that attention is being given to balancing the total amount of wages charged to job numbers with the total of the wages actually paid. Under present conditions an exact balance is, of course, not obtainable, but the differences do not as a rule exceed $30 for a pay roll period.

The reports of time received from either the foremen or the time-keeper are not made out with sufficient care, as we have found numerous instances where men were reported to be engaged on work for a full day, while the time-keeper's records show that the man only worked a fraction of a day, while on the other hand men were reported by the foreman as only having worked a part of a day, while the time-keeper's report showed that they had been at work for the entire day.

The cost system as it now stands, theoretically affords a good check over the wages paid and materials and supplies used in the works, but unless accurate time reports are received from the foremen and physical inventories are periodically taken of the materials and supplies on hand, no actual security is afforded by the system. The cost records furnish complete information in regard to the cost of the various vessels constructed at Sorel. As, for example, the construction of a ten-yard Dipper dredge which is now in progress is divided up into sixty-two sub-accounts, so that the cost of the component parts of the vessel can readily be obtained. This information, however, does not appear to be used in any way, either for the purpose of preparing estimates for the construction of similar dredges or for investigation into the cost of any part which appears excessive.

No private ship building company could afford to start the construction of a vessel without first preparing an estimate as to the cost of the different parts and the total cost of construction, and it seems to us that if only from the point of view of efficiency of operation, a similar practice should be followed at Sorel.

During the course of our examination we have furnished various data as to the cost of vessels and materials manufactured by the yard to the investigators employed by you to report upon the physical conditions. We have not, therefore, considered it necessary in this report to go into any great detail on the question of costs, but should you desire further information in regard thereto, we shall be glad to obtain it for you. We would refer you to the appended comparative statement of construction and other expenditure for the five years ending March 31, 1911, which we have prepared from the annual reports (Exhibit 4). This statement shows the total cost

of the vessels constructed in these years, but our examination of the records has not been of sufficiently exhaustive a character to enable us to say whether the costs shown therein are correctly stated.

In arriving at the cost of construction, no provision has been made for depreciation of the plant and equipment which we would consider necessary in order to arrive at the true cost of construction; further we would point out that no fire insurance is carried for the plant and no expenses incurrred for liability insurance. All of these conditions would place the Sorel yard at some slight advantage in regard to the cost of construction as compared with private yards, provided the labour con ditions and material cost were equal.

GENERAL ORGANIZATION.

We submit herewith a statement showing those employed in the administrative and clerical departments, with the salaries paid to each (Exhibit 5).

In view of the fact that our investigation has not included an examination of the books which relate to the Sorel yard, which are kept by the Marine and Fisheries Department, nor an inquiry into the methods of supervision which that department exercises over the operations of the shipyard, we are not at present in a position to make any recommendation as to the general plan of organization.

It would seem to us that the original plan of the accounting system contemplated that the Director would be responsible for the practical operation of the plant, while the chief accountant would be responsible for the correctness of the books and records and the reports forwarded to Ottawa. As matters now stand, however, the accountant has no real authority over the departments which are supposed to report to him. As, for example, the time-keeper's department takes entire charge of the preparation of pay rolls, and the accountant's signature is only affixed as a matter of form; and the cost and store departments, which should be directly under the supervision of the chief accountant, so far as records are concerned, carry out their work as entirely separate units.

Such a condition of affairs can hardly be expected to give good results, and we cannot too strongly urge the necessity of a re-arrangement of the duties of the clerical departments which would give the accountant direct authority over the work for which he should be responsible.

The principle upon which the general accounting system is based is that all accounts of receipts and disbursements are closed out at the end of the fiscal year without consideration being given to the balances of materials and other assets on hand. Stock records are kept by the store-keeper, which are intended to show the quantities of the different materials and supplies on hand and the value of these stores should be carried in an account on the general ledger and any accounts receivable due to the shipyard should be shown in the same way. A stores account is opened each year in the general ledger, which is charged with the purchases and credited with the issues as they are reported during the year, but at the end of the fiscal year the balance is closed to an account entitled 'Marine and Fisheries Department.' It is possible, of course, that the department carrries forward such balances on its books, but even if this is so they should be carried in some way on the books at Sorel, as otherwise the accountant is not in a position to check up the records of the store-keepers and accounts receivable carried forward are apt to be overlooked.

As mentioned at the commencement of this report, our investigation has been of a preliminary nature only, with the object of reporting to you in a general way upon the conditions as they now exist at Sorel. It is possible that there may be several points upon which you may wish further information, and we shall be glad to extend our investigation into the past transactions as you consider necessary.

We have to acknowledge the courtesy and assistance afforded us by the officials and employees at the plant during the course of our investigation.

Respectfully submitted,

PRICE, WATERHOUSE & CO.

EXHIBIT 3.

FURTHER DETAIL AS TO THE EXISTING ACCOUNTING SYSTEM.

Ordering of Goods.

With the exception of small purchases which are made locally, materials and supplies are purchased by the Marine and Fisheries Department.

The requisitions for materials required are made out by the store-keeper in duplicate, the original being sent to the Director's office and the carbon retained in the store-keeper's files. It is claimed that before requisitions are made out the stock on hand of the article to be ordered is compared with the balance appearing in the stock ledger, but this practice does not appear to be carried out in any systematic manner.

The requisitions received by the Director from the store-keeper are typed in triplicate, the original being signed by the Director and forwarded to Ottawa. A copy is retained by the Director's office and a copy is sent to the store-keeper.

The Marine and Fisheries Department orders the goods and forwards a copy of the order to the Director. On its receipt the Director's office makes three copies of the order one of which is sent to the 'checker' (the employee who certifies as to the receipt of the goods) and one to the store-keeper.

Certification of Invoices and Receipt of Goods.

Four copies of purchase invoices are received which are first forwarded to the 'checker' for certification.

The 'checker' enters all goods in his goods received book as they are delivered, making notes as to their condition and whether they are to be returned. He retains the invoices until all the goods covered by the invoice have been received and stamps each invoice with a rubber stamp as follows:—'I certify that the above goods have been received in good order and are satisfactory.' The 'checker' retains one copy of each invoice for his files and passes the three remaining copies to the store-keeper. The store-keeper checks the prices shown on the invoices against the copies of the order received from Ottawa, and verifies the clerical accuracy of the extensions, after which he enters the quantities and prices in the store ledger.

Three copies of the invoices are sent from the store-keeper to the Director who approves and signs them.

After receiving the Director's approval the invoices are handed to the accounting department, where the extensions and footings are again checked. One copy of the invoice is retained in the accounting department and the two remaining copies are forwarded to Ottawa. Before the invoices are sent to Ottawa they are entered in a book, kept in ledger form, under the head of each firm or company from whom the goods are purchased, and when Ottawa sends advice as to the payment of the invoice they are marked off as paid in this book.

Reports to Ottawa.

A duplicate list of approved vouchers signed by the Director and accountant, together with duplicate copies of the approved invoices, is forwarded weekly to Ottawa for payment.

The duplicate list of invoices forwarded to Ottawa is later returned to Sorel, together with advice of payment of each invoice. Sometimes, however, the cheques are sent down to the Director for distribution.

On the return of the invoices the accountant's department writes up a voucher folder showing the distribution of the payments. The advices of payments are attached to these voucher folders, while the invoices themselves are separately filed. The voucher folders are numbered numerically and entered in the voucher record where the charges are distributed.

Local Purchases.

Purchases made locally are authorized by Mr. Papineau and the invoices are forwarded to Ottawa for approval. These local purchases are small.

Stores.

Stores are kept for the use of both the fleet and the shops and are in charge of Mr. H. C. Chamberland, who was recently appointed. He is assisted by twelve storemen and two clerks.

Goods are only issued from stores on requisition, which we understand require the signature of a foreman, captain or engineer of the fleet.

Store ledgers are now kept in quantities only, although formerly they were kept in both quantities and values. There are four large loose leaf ledgers containing about 6,900 accounts. The ledgers in use at present are somewhat cumbersome in design, but a new ledger has been approved by Ottawa and is to be installed when the inventory now being taken is completed. The ledgers are posted from the invoices and the requisitions for supplies. The prices are entered on the requisitions and they are sent to the Cost Department to be extended.

Fleet Pay Roll.

In January of each year a circular is sent out to the men employed in the previous year who have a good record.

The engagement of men is in charge of Mr. Blais, who assigns them to their positions on the boats.

While on the boats the time of the men is reported to Mr. Blais by the engineer on regular time sheet forms, the rule being that time sheets must be forwarded on the last day of the month.

The engineers reports of time are entered in time books which are kept in Mr. Blais' office, where the rates of pay are filled in and the amounts of the wages extended.

The pay lists are made up in triplicate from the time books and are certified to by Mr. Forneret, superintendent of the fleet. The payment is made by the general paymaster and is witnessed by the captain of the boat or some other officer. Wages are paid in cash.

DRAUGHTSMEN.

J. P. Hereux	Chief draughtsman	$ 1,500 00	per annum.

Assisted by ten draughtsmen whose salaries range from $80 to $115 per month.

SUB-REPORT RE SOREL SHIP YARD---No. 3.

BY MESSRS. PRICE, WATERHOUSE & CO.

MONTREAL, May 28, 1912.

Public Service Commission, Ottawa.

GENTLEMEN,—We herewith submit the following report covering some further work done in connection with our investigation of the accounts of the shipyard:—

ACTS OF PARLIAMENT AND ORDERS IN COUNCIL RELATING TO CONSTITUTION OF SHIPYARD.

We have obtained the following information from the files of the Marine and Fisheries Department regarding the transfer of the control of the plant from the Departments of Public Works and of Railways and Canals:—

(*a*) Act 3 Edward VII, Chap. 53, October 24, 1903. (Exhibit 1). This Act gives the Governor in Council power to transfer the management of any public work, &c., from one department to another.

(*b*) Act 55-56 Victoria, Chap. 17, April 12, 1892. (Exhibit 2). This Act creates the Department of Marine and Fisheries.

(*c*) Abstract from Report of the Committee of the Honourable the Privy Council approved March 11, 1904. (Exhibit 3). This recommends the transfer of the control of the Shipyard and St. Lawrence Ship Channel operations to the Department of Marine and Fisheries.

(*d*) Orders in Council dated May 13, 1910. (Exhibit 4). The Order relates to the appointment of the present Director.

REAL ESTATE.

We have made further enquiry regarding the ownership of the property in which the yard is located. We have been unable to obtain definite information either as regards the ownership of the real estate or the leases; neither the deeds nor leases appear to be on file at the Marine and Fisheries Department.

From a perusal of the correspondence on file (No. 25821) it would appear that the ownership of part of the real estate is in doubt. It is important that definite information be obtained on this subject more particularly if further sums are to be invested in permanent structures at the yard.

With regard to rents paid it would appear that in addition to the $1,200 paid to the McCarthy Estate for the rent of a portion of the yard proper, a sum of $700 is paid annually for the use of a wharf on the opposite side of the river which is used for coaling purposes. It would appear that the purchase of this property has been recommended by the Director (letters September 1, 1909, and March 6, 1912, from Mr. Papineau). The correspondence indicates that the wharf requires a considerable amount of repair. It appears that this wharf was rented by the Director and not the Department.

RELATIONSHIP TO THE ACCOUNTING DIVISION OF THE MARINE AND FISHERIES DEPARTMENT.

So far as we can ascertain no responsibility is taken by the Accountant of the Marine and Fisheries Department in Ottawa for the costs of the operations at the yard nor for the accounting methods in force. A statement of the actual cash disbursed last year, made by the Auditor General and the Accountant in Ottawa, shows that all charges were taken up by Sorel, but no values representing the investment in inventories or plant appear to be carried on the books in Ottawa.

PURCHASING METHODS.

The Purchasing Agent in Ottawa states that he makes his purchases under Act 55-56, Chap. 17, sec. 3.

Tenders are advertised for material and supplies except in case of pressing emergency orders in which delay would be injurious, or where, from the nature of the work, the orders can be more expeditiously and economically executed by the officers of the Department.

The Act referred to above does not specify inspection requirements and we are informed that the inspection of the material supplied to the yard is carried out under the direction of the Director. It is stated that usually before a purchase is made a report of quantities on hand and a full statement of requirements are called for by Ottawa.

We have not made any examination of the tenders and requisitions in Ottawa.

INVENTORY.

On the 2nd instant we attended at Sorel with a view to assisting in the completion of the inventory. The inventory which was completed on the 14th instant may be summarized as follows:—

General stores	$ 44,175 31
Valve store	14,440 90
Metal store	2,008 73
Shed No. 7, miscellaneous material	9,176 78
" 11, bolts, nuts, rivets, nails, &c	5,205 40
" 12, rivets	7,693 40
" 13, manilla rope, fleet furniture and oil	3,316 74
" 15, lead pipes and sheet lead	819 09
" 22, iron and steel castings	14,984 18
Iron pipe	4,954 77
Bar iron, machine steel and cast steel	23,214 74
Pneumatic tools	8,331 26
Electrical supplies	6,621 21
Brass and copper castings	10,873 47
Iron, steel and manganese castings	43,268 74
Tool steel	753 16
Structural steel	21,890 00
Scrap	2,421 11
Coal	3,491 53
Logs	6,306 50
Logs	11,349 19
Sawn lumber	47,902 97
Steel shafts and tubes (shed No. 22)	3,520 15
Chains (shed No. 22)	3,138 98
Broken stone and sand	869 26
Asbestos	1,802 44
Cement	563 81
Electrical supplies	39 00
	$303,132 82

Owing to the adverse conditions under which the inventory was taken no great reliance can be placed on the figures herewith submitted.

The taking of the inventory was left to Mr. Chamberland who has only occupied the position of Storekeeper since January 22nd last and he was assisted by several of the staff who had little experience in the inventory taking.

The inventory was taken at varying dates between the 14th of March and the 11th of May and only in a few cases was it possible to adjust the quantities as taken to those which were on hand at the end of the fiscal year, March 31, 1912. This was largely due to the fact that the stock ledgers were found to be incomplete, badly arranged and in a most unsatisfactory condition generally. As has already been pointed out only a few of the stock ledger accounts were footed and little attention appears to have been given in the past to the important matter of making regular comparison between the balances of quantities on hand as shown by the ledger and the actual quantities of goods in the bins.

Our representative made an attempt to check the supplies as stated in the ledgers with the supplies as shown in the inventory. Owing, however, to the condition of the ledgers and the lack of arrangement in keeping the account it was found impossible to make even a comparison by commodities. The check which was made however sufficed to show that there was a number of articles carried on the stock ledgers which could not be traced in the inventory; this is no doubt largely due to requisitions having been mislaid and consequently not credited, or articles having been removed without report to the office.

We attempted to prepare a statement showing comparison between a year's issues and the amount of stock on hand. It was found, however, that such comparison would take a long time; but from the work done it is clear that in some cases there are sufficient goods on hand to meet the requirements of several years.

It is claimed that the large quantity of material carried is due to the fact that purchases made some years ago have not been utilized in recent construction work.

With regard to the valuation which is placed on the inventory, it is claimed that it is the invoice cost of the goods delivered at the works, and that it is not practicable at the present time to make an adjustment to bring the inventory to current market values.

With regard to the matter of obsolete and dead stock, the Director informs us that in some cases proper provision has been made, but there can be little doubt that considerable adjustment will be necessary to bring some of the articles to their actual present worth from an operating standpoint.

Whilst the inventory cannot be accepted as a correct valuation of the stores and supplies on hand on the 31st of March, 1912, nevertheless it should serve as a guide to the management and assist in determining whether or not the quantities of any particular class of goods carried are too large.

We would direct your attention to the importance of having a physical inventory taken at least once a year, of both supplies and work in process of construction. It is also of the utmost importance that the stock books be rearranged and subdivided according to the various classes of supplies. In this connection it will be necessary to engage the services of at least one store clerk whose duties should be to agree certain numbers of the quantities as shown by the ledger with the quantities actually on hand each day, so that in the course of a few months the balances as shown by the stock book will have been revised in accordance with the actual conditions. If such a plan were properly carried out the matter of taking a physical inventory at any given date should not prove a difficult task as is now the case.

It would appear to us that statements of manufacturing and cost generally should be rendered to the Accountant in Ottawa monthly, together with a report of the value of materials and supplies on hand and a comparative statement of direct and indirect labour.

The annual statements of account as issued are in a confused form and should be revised.

ORGANIZATION.

It would seem desirable that the management of the yard should be in closer relationship with the Department of Marine and Fisheries, and that it should not be left largely in the hands of the Director as it appears to be at present. It would also appear to us desirable to establish a closer sense of relationship and sense of interdependency between the various local officials. In this connection we would recommend that the Director or Superintendent be made directly responsible to the operating officials of the Marine and Fisheries Department, and that the Accountant at Sorel be directly responsible to the Chief Accountant of the Marine and Fisheries Department.

We would also suggest for your consideration the advisability of establishing a local board of control or management which should meet at least once a week and discuss estimates and current requirements in matters of management in general. Copies of the minutes of the meetings should be forwarded to the Department of Marine and Fisheries so that the Department may at all times keep in close touch with local conditions. This committee or board should be composed of the Superintendent, Assistant Superintendent, Accountant and the Storekeeper, and the Dredging Superintendent might also be included.

The statements of cost should be so arranged that they would show clearly the true cost of construction or maintenance, so, if thought desirable tenders could be called for from outside firms and comparisons as to the yard cost and outside cost made.

A study of existing conditions and methods makes it clear that adherence to precedent and lack of individual incentive has brought about conditions such as no private business concern or corporation could follow without a certainty of loss if not financial disaster.

We append hereto various Exhibits dealing with the Acts of Parliament and Orders in Privy Council referred to in this report, and shall be glad to furnish you with any further information desired.

Respectfully submitted,

PRICE, WATERHOUSE & CO.

EXHIBIT No. 1.

EDWARD VII, CHAP. 53.

AN ACT RESPECTING THE MANAGEMENT AND CONTROL OF PUBLIC AND OTHER WORKS.

OCTOBER 24, 1903.

His Majesty by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

(1) The Governor in Council may at any time transfer the management, charge and direction of any public work, or any power, duty or function with respect to any work or class of work, whether public or private, which is assigned to, or vested by Statute in any Minister or Department, to any other Minister or Department; and from the date appointed for the purpose by the Governor in Council such power, duty or function shall be transferred to and vested in such other Minister or Department; and the provisions of the Public Works Act, so far as they are applicable, shall apply to any work or property the maintenance, repair, control or management of which is transferred under the Act.

EXHIBIT No. 2.

55-56 VICTORIA, CHAP. 17.

AN ACT RESPECTING THE DEPARTMENT OF MARINE AND FISHERIES.

Assented to 12th April, 1892.

(1) Department to be called 'Department of Marine and Fisheries,' Minister to have the management and direction of said Department.

(2) The Governor in Council may appoint an officer who shall be called the Deputy Minister of Marine and Fisheries and who shall be the deputy head of the Department of Marine and Fisheries, and the Governor in Council may also appoint

such other officers as are necessary for the proper conduct of the business of the said Department, all of whom shall hold office during pleasure.

(3) The Minister shall invite tenders by public advertisement for the execution of all works except in cases of pressing emergency in which delay would be injurious to the public interest or where, from the nature of the work it can be more expeditiously and economically executed by the officers and servants of the Department, and the said Minister shall also in like manner invite tenders for all contracts for supplies.

EXHIBIT No. 3.

EXTRACT FROM A REPORT OF THE COMMITTEE OF THE HONOURABLE THE PRIVY COUNCIL APPROVED BY THE GOVERNOR GENERAL ON THE 11TH MARCH, 1904.

On a report dated 7th February, 1904, from the Right Honourable the President of the Privy Council, submitting that an Act passed at the last session of Parliament, respecting the management and control of Public and other works (3 Edward VII, Chap. 53) provides for the transfer by the Governor in Council of the management, charge and direction of any public works, or any power, duty or function with respect to any work or class of works, whether public or private, which is assigned to or vested by Statute in any Minister or Department, to any other Minister or Department.

The Minister recommends as follows:—

(1) With a view to systematizing and facilitating the work in connection with Hydrographic Surveys, the administration of which branch of the public service is assigned to the Department of Marine and Fisheries under the provisions of 55-56 Vic., Chap. 17, and the work whereof has been continuously performed by that Department for many years past, that all the Hydrographic work of the Department of Public Works and of Railways and Canals be transferred to the Department of Marine and Fisheries.

The Honourable the Minister of Marine and Fisheries and that Department alone be charged in future with the management and control of such surveys.

(2) That from and after the first of July next (1904) the management and control of the St. Lawrence Ship Channel together with the dredging and sweeping plant steamers and all other appliances now used by the Department of Public Works in connection with that work be transferred to the Department of Marine and Fisheries so as to place the supervision of the improvements to navigation on the St. Lawrence route under the jurisdiction of the Department which is directly responsible for the aids to navigation on that route.

(3) That all the duties, powers and functions with respect to any work or class of works conferred upon the Minister of Public Works by any of the Acts relating to Harbour Commissioners be transferred to and hereafter exercised by the Minister of Marine and Fisheries.

(4) That any records and plans in the possession of the Department of Public Works or of Railways and Canals which refer to any of the above mentioned works and which may be required by the Department of Marine and Fisheries for its information and guidance upon assuming control of the said works be transferred to the last named Department upon its making application.

(5) That all moneys voted by Parliament to either the Department of Public Works or that of Railways and Canals for the purpose of carrying out any of the works under the control of either Department and now transferred to the Department of Marine and Fisheries be placed to the credit of the last named Department.

(6) That the changes as recommended above take effect from this date except as hereinabove otherwise provided.

The Committee submit the same for approval.

J. J. McGEE,

Clerk of the Privy Council.

EXHIBIT No. 4.

CERTIFIED EXTRACT FROM THE MINUTES OF A MEETING OF THE TREASURY BOARD HELD ON THE 7TH MAY, 1910, APPROVED BY HIS EXCELLENCY THE GOVERNOR GENERAL IN COUNCIL ON THE 13TH MAY, 1910.

Marine and Fisheries.

The Board recommend that Mr. L. G. Papineau be appointed Director of the Government Shipyard at Sorel, to fill the vacancy caused by the transfer of Mr. G. J. Desbarats, with salary at the rate of $3,000 per annum from the 1st of April, 1910, payable out of the Parliamentary Appropriation 'River St. Lawrence Ship Channel.'

F. K. BENNETTS,

Asst. Clerk of the Privy Council.

SUB-REPORT

RE

MONTREAL HARBOUR COMMISSIONERS

MARINE AND FISHERIES DEPARTMENT

REPORT TO PUBLIC SERVICE COMMISSION BY MESSRS. PRICE, WATERHOUSE & CO.

MONTREAL, April 29, 1912.

To the Public Service Commission, Ottawa:

GENTLEMEN,—On February 16th last, we had the honour to receive instructions from your Commission to investigate the transactions of the Harbour Commissioners of Montreal. Our investigation has been conducted along the lines indicated by your verbal instructions and correspondence, the object and scope of which may be summarized as follows:—

To audit the transactions of the Harbour Commissioners for the five years ending December 31, 1911, and report thereon.

To prepare such statements of account and statistics as would place before your Commission the nature and volume of the business.

To enquire into the business methods in the several departments for the purpose of suggesting improvements which would result in greater efficiency and economy in operation; and to submit a report dealing with the administrative problem before the Commissioners, the organization and equipment provided for carrying out the work of the Commissioners and the methods and procedure employed by those in charge thereof.

INTRODUCTORY.

The Harbour Commission of Montreal is a corporate body constituted by Act of Parliament. The Commissioners are appointed by the Governor in Council upon the recommendation of the Minister of Marine and Fisheries. The powers and duties of the Commissioners are set forth in the Montreal Harbour Commissioners Act, 1894 (57-58 Victoria, Chap. 48, and Edward VII., Chap. 33). They receive remuneration for their services out of the revenue of the harbour, as the Governor in Council determines. The following are the names of the present Commissioners, who have held office during the past five years: Major George W. Stephens, President, and Messrs. L. E. Geoffrion and C. C. Ballantyne.

The Corporation has jurisdiction within the limits of the Port of Montreal, which, as defined by the Act, extend along the river front on both banks for about seventeen miles, but do not include the St. Lawrence Ship Channel which is under the direct control of the Department of Marine and Fisheries. The Commissioners in their capacity as trustees for the Government, hold the harbour lands and areas which consist of about 200 acres of frontage and 12,000 acres of river area.

Under Section 18 of the Harbour Commissioners Act, the Corporation appoints the Harbour Master and such other officers as it deems necessary, and allows them such compensation or salaries as the Commissioners determine from time to time. The Harbour Master, Deputy Harbour Master, and the Secretary, are the only officers referred to specifically in the Act.

The Harbour Commissioners have power to make by-laws regarding the shipping and traffic rates, which must be confirmed by the Governor in Council and be published in the *Canada Gazette* before they become effective.

The revenue of the port is derived from wharfages on freight inwards and outwards and from rentals of pier sheds and other harbour facilities.

The Commissioners are required to submit an account annually to the Governor

in Council, through the Department of Marine and Fisheries, in such manner and form as he sees fit to direct, the Act requiring the charges against revenue to be made in the following order:—

(*a*) Expense incurred in the collection of revenue.

(*b*) Expense attendant on keeping the harbour clean and on keeping the wharves and other works in a state of thorough repair.

(*c*) Payment of interest due on money borrowed.

(*d*) The repayment of the principal of such sums.

AUDIT OF PAST TRANSACTIONS.

Before dealing with our examination of the cash transactions, pay rolls, and the purchase and distribution of materials, supplies, &c., it may perhaps assist to a clearer understanding of the business and methods of the Commission if we first give some brief description of the receipts and disbursements entering into the accounts of the past five years.

We would refer you to the summarized statement of Revenue and Expenditures by years (Exhibits 2, 3 and 4), which are supported by various subsidiary exhibits of the income and expenditures of the different departments. The following is a summary of the total transactions for the five years under examination:

Gross revenue—		
Wharfage Dues, Rentals of spaces, etc.		$2,084,837 15
Elevators, Harbour Railway, Steel Sheds, etc.		1,352,841 70
		$3,437,678 85
Deduct—		
Expenses of Operating and Maintenance	$1,054,799 67	
Administrative and other expenses	311,194 00	
Adjustment of book inventories, the greater proportion of this loss being apparently chargeable against operations prior to year 1907	55,296 34	
		$1,421,290 01
Net operating Revenue		$2,016,388 84

The interest charges during the same period have amounted to $2,086,172.95, from which must be deducted the interest on the cost of improvements, etc., during the period of construction which has been charged to capital account, leaving a net interest charge of $1,675,771.75.

In considering the interest charges, we would mention that a proportion of that charged to the cost of construction, amounting to approximately $145,000, should properly be credited to the operations of the period prior to the investigation. On the other hand, however, it would appear that the Commissioners are entitled to a further credit on account of interest on construction now in progress, the amount of which cannot be determined at present. On reference to the statement of revenue which we submit (Exhibit 3) you will note that in the year 1909 an amount of $228,000 was charged to the cost of steel sheds and credited to revenue as representing interest during the period of construction of the sheds. It would appear that this amount includes a charge of $55,401.20 already made in the year 1907, and the surplus shown should accordingly be reduced by this amount.

It has not been the practice of the Commissioners to provide for accruing depreciation and renewals or to charge revenue with any sinking fund provision for the repayment of outstanding indebtedness. It will be evident, therefore, that the surplus account is subject to considerable adjustment in this respect.

The gross revenue for the year 1911 shows an increase of 86·5 per cent, as compared with that of the year 1907, the greater portion of this being due to the additional revenues received from elevators, harbour sheds, &c.

REVENUE.

Wharfage Dues.

These may be classified as transatlantic and maritime tonnage dues which are collected by the Customs Department, and those derived from local shipments which are collected by the Paymaster.

Particulars of the tariffs of wharfage rates will be found in a printed circular issued by the Commissioners, the Commissioners being empowered, subject to the approval of the Governor in Council, to fix and revise the tariff on the various commodities from time to time as they see fit. (57-58 Victoria, Chapter 48, Section 28).

The dues in connection with the transatlantic and maritime wharfages are collected by the Customs Department in accordance with Section 33 of the Act above referred to.

The Commissioners employ two inspectors of wharfages who have office accommodation at the Customs Department whose duties are to check the inwards declaration tickets with the bills of lading and in the case of outward wharfages with the ship's manifest and to assess the dues payable.

The Customs Department make payment of wharfages by cheque to the Secretary-Treasurer on the 15th and 30th of each month, the amounts being verified by comparison with the independent register kept by the wharfage inspectors. We submit (Exhibit 26) a statement of tonnage, inwards and outwards, classified according to tariff rates and showing the tonnage on which dues have been collected during the past five years. The maritime and transatlantic dues show an increase of 8·3 per cent in the five years, while the revenue on the tonnage, shows an increase of 11·3 per cent during the same period. The checks surrounding the collection of revenue by the Customs Department appear to be good in that the Customs Department make all collections, the wharfage rates being determined by the clerks of the Harbour Commissioners. We would suggest, however, that the wharfage tickets should be forwarded to the accounting department for audit.

The Customs Department does not receive any remuneration for the work done for the Commissioners, but gratuities have been given to the various employees connected with these collections of revenue each year at Christmas time.

Local wharfage dues are collected by the paymaster who also acts as wharfinger. A comparative statement of the revenues collected will be found in Exhibit 11, the number of local vessels and tonnage and particulars as to this revenue by commodities being also set forth in this and the four following exhibits.

Dues are charged on some of the materials used by the Commissioners in construction and other work. In order that better statistical information may be obtainable, we would suggest that dues on material for the use of the Harbour Commissioners should be kept in a separate account.

Rental of Spaces, Lands, Sheds, &c.

Collections on this account are made by the Secretary-Treasurer's Department, bills being made out as the accounts fall due, but no entry is made in the accounting books until the accounts are paid when the cash is credited direct to the revenue account. A rough memorandum book is kept in which are recorded particulars of some of the bills which are sent out, the bills being made in duplicate. This system is unsatisfactory, as there is little means of maintaining any real check on the collections. Records should be kept containing full particulars of the rentals of

spaces, sheds, &c., and as these rentals fall due they should be charged in a register provided with columns for the various classes of revenue, the total of which should be credited monthly to the revenue accounts.

This remark will also apply to all revenue derived from other sources, such as elevators, cranes, traffic department, &c.

EXPENDITURES.

Repairs and Maintenance.

It will be seen that there has been very little variation in these expenditures during the years under examination. It would not be unreasonable to expect that the repairs would show a tendency to increase in proportion to the revenue, and it is possible that there may be accruing repairs for which provision should have been made against the revenue of the past few years.

Operating.

These expenses represent the direct charges against the revenues of the various departments and consist principally of labour and supplies.

Miscellaneous.

We have grouped under this heading certain miscellaneous charges.

Administrative and Collection.

It will be seen that the total charged to this account shows little variation during the period.

The charges under the heading 'Harbour Expenses' were considerably higher in the first two years, which was mainly due to expenses incurred by the officials in visiting several of the principal ports with a view to recommending improvements at Montreal.

In connection with 'Harbour Expenses' we have made a detailed analysis and generally speaking this account is made up of petty items and also entertaining expenses which have averaged about $1,300 per annum. It also includes the cost of painting and renovating the harbour offices, amounting to $2,352.90.

Interest Charges.

We have shown interest paid on debentures separately from interest on bank overdrafts. Interest on bank overdrafts has averaged about $4,600 per annum.

PURCHASING METHODS.

Generally speaking estimates of material required for construction or maintenance work are approved by the Commissioners and the materials are called for by requisitions of the various departmental superintendents.

These requirements are met either by advertised tender and contract or in the case of the smaller commodities by the Purchasing Agent as described later.

We submit herewith a comparative statement by years showing the values of the principal commodities purchased (Exhibit 17). This statement is necessarily condensed as it is impracticable to give any elaborate analysis.

With regard to the purchases for the construction of Elevator No. 2, which is at present in course of erection, the contractors, Messrs. J. S. Metcalf & Co., make out specifications of the requirements, and requisition the Engineer for the necessary supplies. In the case of the more important purchases calls for tenders are made by

the contractors. These tenders are received by the Secretary-Treasurer and submitted to the Commissioners and they are then forwarded to the contractors, who report back to the Commissioners with their recommendation as to which should be accepted.

Purchases by Tender.

The system of purchasing by tender, except in the case of Elevator No. 2, is briefly as follows:—estimates of quantities of supplies required are submitted to the Commissioners who instruct the Secretary-Treasurer to advertise in the principal local papers, and the Chief Engineer furnishes inquirers with specification forms. The tenders are addressed to the Secretary-Treasurer in closed envelopes and are opened in the presence of the Commissioners on a stated day. Usually in the case of supplies the tenders are handed to the Engineering Department for tabulation after which they are returned to the Commissioners, through the Secretary-Treasurer, and the accepted tender is initialed on the tabulated statement by one of the Commissioners and the award entered in the minute book. The contracts are prepared by the Secretary-Treasurer for signature. Advertised tenders are not dealt with in any way by the Purchasing Agent.

It is required that tenders be accompanied by a certified cheque for not less than 5 per cent of the amount of the tender and in the case of the accepted tender, this is retained until the contract is completed. Usually an additional amount of 5 per cent of the total amount of the contract is also retained by the Chief Engineer from the first estimate until the satisfactory completion of the contract.

We have prepared, and submit herewith (Exhibit 27), a statement setting forth the names of the parties tendering, quantities called for and prices quoted for the principal commodities during the five years, this statement also showing the names of the firms to whom the contracts in connection with these purchases were awarded.

Generally speaking it was found that when the tenders complied with the specification as prepared by the Engineering Department the lowest tender was accepted.

The system of receiving tenders appears to be regularly carried out by the Commissioners. We would suggest, however, that the tenders after being tabulated, be attached to the tabulation together with the correspondence relating thereto and systematically filed according to commodities. It is customary in the case of large corporations to keep a contract register for the purpose of recording the necessary particulars; at present records of deliveries under the contracts are kept in the Engineering Department on loose sheets which is unsatisfactory.

Purchases by Purchasing Agent.

All purchases in small quantities are made by the Purchasing Agent. These purchases represent—

(1) Purchases made direct by the Purchasing Agent according to catalogue prices or telephone communication.

(2) Purchases for which tenders are asked by letter, signed by the Purchasing Agent.

These tenders are submitted to the Commissioners with the original requisition for the goods, and they initial the tender which is to be accepted. It would appear that it is the practice to accept the lowest tender.

The Purchasing Agent accepts responsibility as to the prices on the invoices and the various storekeepers certify as to the receipt of the goods. Certification as to the correctness of prices and receipt of goods is made by the initials of the employees responsible. It would be preferable to affix certifications by means of rubber stamps containing spaces for signatures.

Testing of Material.

It is the policy of the Commissioners to have the principal purchases passed upon as to quality by outside inspectors, with the exception of timber which is inspected by the Mill Superintendent. In the past five years the contract has been given to the Canadian Inspection Company which tests the material upon the requisition of the Chief Engineer or in the case of Elevator No. 2 of Messrs. J. S. Metcalf & Co.

The following information in regard to the methods of testing has been furnished to us:—

In the case of structural material inspected at the mills, the Inspection Company forward periodical reports of tests, giving details of that accepted as well as that rejected.

In the case of testing cement, the Inspection Company takes samples of cement at the mill, which are submitted to the usual tests as to fineness, specific gravity, breaking, &c.

Sand is occasionally tested for coarseness of grain and impurities. Samples are taken from the barge by the Inspection Company and prompt report made so that the sand may be rejected if found unsuitable.

The inspection of castings is made at the foundry by the Inspection Company and chemical tests are made occasionally.

When considered necessary tests are asked for on certain manufactured goods. Samples are sent out with identifying numbers and all evidence of the origin of the package is carefully removed so that the Inspection Company can have no knowledge of the maker's name.

So far as we could ascertain all timber is passed upon as to quality and accepted by Mr. W. R. Lunan, Superintendent of the saw mill, who is under the Chief Engineer. Owing to the fact that timber is purchased in very large quantities it might be considered more desirable to obtain independent opinion as to the quality, as is done in the case of other purchases.

APPROVAL AND DISTRIBUTION OF VOUCHERS.

Invoices and accounts are received partly by the Secretary-Treasurer and partly by the Purchasing Agent. All invoices are handed to the Purchasing Agent for examination unless they relate to contracts, when they are handed to the Engineer's Department.

The Purchasing Agent checks the invoices against the requisitions and reports of receiving clerks, compares the prices and makes any necessary deduction for discount. He returns the invoice to the department in which the purchase originated, i.e., the Engineer's Department, Traffic Department or Secretary-Treasurer's Department, with a note as to the terms of payment. The heads of the departments certify the correctness of the invoices after which they are sent to the Secretary-Treasurer for payment.

The Engineering Department keeps records in which are entered all invoices passed by that department for payment, and which contain detailed information as to the distribution of the material and the cost of the different work carried out.

The Traffic Department keeps a memorandum record of the principal purchases originating in that department and rough data as to cost.

All invoices received by the Secretary-Treasurer's Department for payment are recorded in a special register as well as being entered in the cash book. Cheques are sent out with the invoice, in some cases a written receipt being attached to the account for signature by the payee. The accounts on being returned after payment are numbered consecutively according to the cash book order and filed, and an index in alphabetical order by years is kept.

At stated periods the accounts paid or to be paid are initialed by one of the Commissioners. The practice is to make payments both by cash and by cheque.

At the present time all petty payments pass through the general cash book which appears to be unnecessary. We would recommend that the Treasurer or Cashier should have a Working Fund which would be reimbursed from time to time, as required, by cheque drawn from the general cash. All payments entered in the general cash book should be made by cheque. A Working Fund should also be kept by the Paymaster.

Cash discounts obtained are deducted on the face of the invoice, and the net amount entered in the cash book. It would be preferable to show on the face of the cash book the deduction for discount.

When the Commissioners purchase goods which are to be delivered f.o.b. Montreal they sometimes pay freight for the consignors. These payments should be deducted from the consignor's account before settlement, but under the present system it is difficult to obtain conclusive proof that this has been done. Generally speaking the necessary deductions appear to have been made, but there have been several small payments on account of freights which were apparently recoverable, and the refund of which we have been unable to trace. We would suggest that all payments of this character be debited to a clearance account which would be credited as the deductions were made.

At the present time the distribution of expenditures is partly made in the Secretary-Treasurer's Department through the cash book and partly in the Engineer's Department. We would suggest that a voucher record or purchase journal be kept which would facilitate the distribution of expenditures and would record them as they are incurred and not as when paid, as is now the case.

EXAMINATION OF CASH TRANSACTIONS.

We have examined the cash books of the Corporation for the five years ending December 31, 1911, both in regard to revenue and disbursements. We traced all bank deposits as shown by the cash book into the bank pass book and reconciled the balance thereon at December 31, 1911, with the bank balance carried on the ledger.

As already noted herein the records in regard to the collection of revenue, such as local wharfage dues, rents, &c., are incomplete, and while nothing has come to our notice during our examination which would raise doubt as to the correctness of the entries for these receipts, we have been unable to make any satisfactory verification of them. We would also mention here that all cash received is not deposited in the bank intact as is usually the practice in large corporations.

The cash payments for the five years were compared with the vouchers on file, and with the exception of about twenty payments for the year 1907 (for which cancelled endorsed cheques were produced) and a few small items in other years, the payments in the cash book have been fully vouched. In addition to examining the vouchers we examined the paid cheques for the same period, and compared them with the cash book. With a few unimportant exceptions all cheques were produced for our inspection.

Pay Lists.

The pay lists for the five years ending December 31, 1911, were compared with the cash book and were also examined as to certification. Labour pay lists are certified by the Chief Engineer and signed by the Engineering Department Accountant; the administrative staff pay lists are certified by the Secretary-Treasurer and those of the Traffic Department are certified by the Superintendent and signed by the Traffic Department's chief clerk. The general labour pay lists bear the certificates of the Paymaster and a witness (usually the Assistant Paymaster) as to payment, while the pay rolls of the permanent staff are signed by the individuals themselves. The pay

lists in connection with the construction of Elevator No. 2 bear, in addition, the certificate of Messrs. J. S. Metcalf & Co. All pay lists are approved by the Commissioners.

The clerical accuracy of the general labour and administrative pay lists for the year 1907, and for the months of October, November and December, 1908, were verified and the salary increases of the permanent staff during the five years were, with one or two minor exceptions, found to have been properly authorized by the minutes of the Commissioners.

In examining the pay lists it was noticed that those in connection with the new harbour office building, amounting to some $18,000, had not passed through the Engineering and Paymaster's Departments. In most cases these lists were certified by the Secretary-Treasurer and all bore the approval of the Commissioners, but in a few cases the Commissioners' initial was the only authorization for payment. The contract for the erection of this office building was let to one Charles Thackeray, who assigned in favour of his creditors before starting the work. The Commissioners purchased his plant for $3,000, and carried on the work with Thackeray as their foreman at a salary of $150 per month. We direct your attention to these pay rolls as they do not conform to the system of internal check devised for the regular pay rolls, and we would also suggest that you carefully scrutinize the signatures as in several cases there is quite a similarity in the handwriting.

The system in force for the payment of pay rolls appears to be satisfactory if properly carried out, but we would call your attention to the two following defects:—

(*a*) That the Paymaster certifies that all the persons enumerated on the roll have been paid, but this does not appear to be strictly in accordance with fact, as there are usually some envelopes uncalled for at the time of certification.

(*b*) That the duties of the Paymaster comprise the collection of local wharfage dues in addition to the payment of wages. It would appear that moneys received for wharfage are at times used to pay wages of employees leaving before the regular date of payment, and apart altogether from this feature, it is undesirable for any employee other than the cashier to be responsible for both the receipt and disbursement of money.

We submit (Exhibit 18) a summarized comparative statement of the wages during the five years ending December 31, 1911, and a comparative statement of rates paid (Exhibit 19); also a schedule of salaries of permanent staff (Exhibit 20).

GENERAL REVIEW OF ASSETS AND LIABILITIES.

We submit a balance sheet (Exhibit 1) setting forth the assets and liabilities of the corporation, as shown by the books at December 31, 1911.

Up to the time of preparation of this report the books had not been finally closed by the Commissioners and the statements submitted herewith for the year 1911 may not, therefore, be in exact agreement with those to be submitted by the Secretary-Treasurer.

CONSTRUCTION AND IMPROVEMENTS OF HARBOUR WORKS.

We may refer here briefly to the methods by which the capital expenditures are financed. A definite plan of construction and improvement is adopted by the Commissioners, and appropriations for this work, approved by the government, are made from time to time by Act of Parliament. Estimates are prepared and the work is commenced, and as the construction progresses, statements of expenditures are forwarded to the Department of Marine and Fisheries and applications are made for advances out of the amount appropriated.

On reference to the balance sheet it will be seen that the cost of harbour works and improvements, as carried on the books, amounts to $17,793,971.79, while the Commissioners have borrowed from the government and the public an amount of $16,607,000. It would appear from the records of the Engineering Department that the Commissioners were entitled to a further advance at December 31, 1911, of approximately $340,000 on capital outlays during the five years to that date.

We submit herewith a statement showing the position of the Capital Construction Accounts at the beginning and end of the period of our examination (Exhibit 21).

We have examined the vouchers for the payment of labour and material during the five years, but it is not practicable for the purpose of this report to thoroughly investigate the character of each piece of construction work, with a view to stating whether or not it is in the nature of replacement, renewal or reconstruction. No good classification of construction expenditures has been kept and we would recommend that this should be done in future. The expenditures might be classified under the following main groups:—

(*a*) Those in connection with the purchases of real estate outside the harbour limits.

(*b*) Those in connection with permanent improvements such as wharves, embankments, &c.

(*c*) The deepening of harbour channels and basins by dredging.

(*d*) The construction and dredging equipments such as machine shops, dredging fleet, &c.

(*e*) The equipment which is operated by the Commissioners with a view to obtaining revenue, such as elevators, harbour railway, wharf sheds, &c.

DEPRECIATION.

It is not practicable to state how much of the total expenditures on capital account represent construction on Harbour Works which has been replaced by modern improvements.

No consideration has been given during the period under review to the question of depreciation on the structures or equipment under the control of the Commissioners. Whilst obviously the corporation stands in a somewhat different position from an industrial company, it would seem that this important factor in the cost of operation should not be omitted from consideration; in fact, the determination of the true cost of operation, which must include a provision for depreciation, would seem to be the first requisite in the establishment of a correct and equitable scale of rates, the formulation of which is one of the principal duties of the Commission.

We quite recognize that the wide benefits to be derived from fostering the commerce of the port and other considerations of policy must necessarily enter into the final determination of the rates to be charged; but we think that it is essential that the true costs of service be first determined, which can only be done after the inclusion of a proper charge for depreciation so that any loss arising from the insufficiency of the rates charged may be compared with the broad benefits attained, and the wisdom of the policy judged accordingly. Much of the property is of a permanent nature, but at the same time there are considerable parts of the investment in structures and the entire investment in equipment which must admittedly suffer depreciation, and in this connection we might point out that the investment in such property having increased materially in recent years the current renewals and repairs cannot be sufficient to make good the accruing depreciation arising through wear or tear or obsolescence.

If it were decided to follow our recommendations regarding depreciation we should be glad to advise as to the rates which might be adopted on the various classes of construction, so that the annual charge against income might be adequate to provide for the reconstruction and eventual replacement of the structures.

REAL ESTATE.

Crown lands lying within the limits of the harbour of Montreal are vested in and held by the corporation (57-58 Victoria, chap. 48, sec. 21) and so far as we understand no value appears in the books for such lands. In addition the Commissioners hold the three following parcels acquired from time to time for the purpose of facilitating traffic operations:—

(*a*) Land and buildings of Commissioners offices on Common street. This property is carried on the books at $82,931.90, as compared with an assessed value of $91,000.

(*b*) Land in St. Mary's ward, Papineau avenue, purchased from Alex. Maclaren on March 23, 1903, carried at a value of $25,239.90. This property was purchased as a site for the old harbour yard.

(*c*) Land with buildings thereon at Notre Dame street, purchased January 19, 1911, from P. Rafferty for $72,000. The Commissioners paid $10,000 in cash, and assumed mortgages in favour of the Montreal Loan & Mortgage Company for $18,000 at 6 per cent. The balance of the purchase money which is payable within three years from January 1, 1911, bears interest at 5 per cent.

The usual city rates are paid upon the above properties, but no rates are paid on the property within the Harbour limits. The city of Montreal is, however, we are informed, claiming that the Commissioners are liable for rates on improvements.

The Commissioners allot and lease areas of land and wharves or parts of wharves within the port limits from year to year and also for extended periods. All leases, excepting those for wharf sheds (by-law 89) are authorized by by-law approved by Order in Council.

We append to this report (Exhibit 23) a schedule setting forth in summary form the allotments and leases as authorized by the various by-laws. In the case of by-laws 82, 83, 84 and 85 no leases have been granted, but the allottees are occupying the various premises subject to the pleasure of the Commissioners.

DREDGING.

We submit statements of dredging done during the past five years, which we have obtained from the Engineering Department. We are informed that the dredging charged to capital account is of a permanent character and that none of it represents expenses of maintaining the depth of the harbour. On reference to these statements (Exhibits 24 and 25) it will be noted that the cost per cubic yard varies considerably.

ELEVATOR No. 2.

The necessary excavation and preparation of the site for this elevator was completed by the Commissioners. The erection of the elevator is being carried out under contract awarded to Messrs. J. S. Metcalf & Co., in 1910, without tender, under the following conditions:—

(*a*) The entire construction is subject to the supervision of the Harbour Commissioners, but it is under the direct control of the contractor's superintendent, Mr. F. N. Hodge.

(*b*) Materials required in construction are furnished by the Commissioners on requisition of the contractors, who, however, recommend the placing of contracts. Wages are paid by the Commissioners, but the men are engaged by the contractors, the rates of pay being subject to the Commissioners' approval.

(*c*) The contractors supply certain equipment and machinery.

(*d*) The contractors are to receive 10 per cent on the cost of the construction, 8 per cent being paid as the work progresses and the remaining 2 per cent being held back until completion of the work.

Up to December 31, 1911, the labour and material cost of construction amounted to $1,323,593.99, and up to that date the contractors had been paid $85,568.83.

The entire completed cost of the elevator, including the extension in course of construction is estimated as follows:—

General construction	$1,657,207
Excavation and clearing	235,000
Extension	290,000
	$2,182,207

It is stated that this elevator will have a capacity of 2,620,000 bushels.

SHIP CHANNEL EXPENDITURES IN SUSPENSE.

The books show a debit balance against the Government of $1,112,890.72, which appears to represent expenditures incurred in connection with the ship channel. This expenditure was incurred a number of years ago, and there is no one at present in the office thoroughly conversant with the details, but so far as we can ascertain it is offset by an appropriation of surplus.

The following is an extract from a report of the Finance Committee, dated February 24, 1899, submitted to the board and approved on the 7th March, 1899:—

'It was decided to open an account in the ledger styled Dominion of Canada Suspense Account, and that it be debited with the following accounts to wit, the above acounts $3,986,243.72; the above being balance of expenditure on the 20-foot channel, for interest on the loans made for the 27½-foot channel and for the buoyage in the channel, these claims being justly due to the harbour of Montreal, and that the said account be credited by Dominion Government. $2,873,353 of this amount having been received during construction as loans and from the repayment of which the Government discharged the Commissioners by virtue of Act 51 Victoria, Chap. 5, leaving a balance due to the Commissioners of $1,112,890.72.'

The amounts originally expended on behalf of the Government were as follows:—

New channel operations	$2,307,691.70
Lake and river operations	295,471.00
New dredging plant	535,236.63
Buoys and beacons	53,816.44
Dominion Government interest account	794,027.95
	$3,986,243.72
Deduct: Amount for which the Government discharge the Commissioners	2,873,353.00
Leaving the amount referred to above	$1,112,890.72

With regard to the special surplus account appearing in the balance sheet—this is made up as follows:

Reserve set up out of surplus for interest account, commencing 1878	$794,027 95
Reserve set up out of surplus between the years 1851-1873	300,000 00
	$1,094,027 95

ADVANCE ON ACCOUNT OF ELGIN SEWER BASIN.

We are informed that it is necessary to extend the city sewer and that in order to expedite the completion of the work the Commissioners have arranged with the city to share the joint cost pending the result of a friendly action to decide who should pay for the extension.

ACCOUNTS RECEIVABLE.

We have discussed the value of these accounts with the officials of the Corporation and it would appear that balances amounting to about $32,555.44 are doubtful, and $1,774.78 are irrecoverable. Included among the accounts receivable are three accounts amounting to $485, which represent advances to employees.

DEFERRED CHARGES.

This asset represents the discount on debentures, series 'H' and 'J,' which were issued to the public. This account is being reduced each year by the addition made to interest account on the basis that the discount will be absorbed during the term of the debentures.

FUNDED DEBT.

The borrowing powers of the Commissioners are set forth in section 35, 57-58 Victoria, chapter 48, and subsequent Acts.

Particulars as to debentures outstanding according to the books at December 31, 1911, will be found in Exhibit 22. Of the total of $16,607,000 issued, $1,872,000 was in the hands of the public, and $14,735,000 is due to the Dominion Government. The balance due to the Government has not been verified by communication with the Minister of Finance.

During the five years the advances from the Government which are represented by debentures issued amounted to $7,895,000, of which $100,000 was to retire debentures, Series 'A' which matured July 5, 1910, the remainder being against construction expenditures.

We are informed that the debentures carry no sinking fund obligations, but we are unable to make a definite statement in this respect as no copy of the form of debentures is at present readily obtainable. The debentures Series 'A' which were retired have been destroyed by order of the Commissioners.

DEFERRED CREDIT, RENTAL RECEIVED IN ADVANCE.

This credit of $100,000 represents the consideration paid by the Canadian Pacific Railway for a lease for forty years of five parcels of land as authorized in by-law 108. This was offset by an agreement to purchase from the railway company 350,000 cubic yards of filling material to be used on the high level railway for a like consideration which has been charged to construction account.

PRESENT ORGANIZATION AND BUSINESS METHODS.

In order that you may readily follow the existing plan of organization of the corporation, we refer briefly in this caption to the duties of the various officers and the departments controlled by them.

The work carried out by the Commissioners, subject generally to the approval of the Governor in Council, may be divided into the following main subdivisions:—

(*a*) Construction of Harbour Works.

(*b*) Maintenance of Harbour Works.

(*c*) Collection of port dues and rentals.
(*d*) Operation of revenue producing equipment.
(*e*) Supervision of port traffic.

The various details of the work are in charge of the Secretary-Treasurer, Chief Engineer and Harbour Master, who report direct to the Commissioners. The Manager of the Traffic Department and the Purchasing Agent also report directly to the board, although subject to the direction of the officials named above. The Board is also advised by a Consulting Engineer, Mr. John Kennedy, who was for many years Engineer to the Corporation.

SECRETARY-TREASURER.

This office is held by Mr. David Seath, who acts in the capacity of Secretary-Treasurer and Comptroller of the Corporation. He attends the meetings of the Board, has charge of the usual secretarial duties; and all correspondence, excepting that attended to by the Chief Engineer, passes through his department.

As Treasurer he attends to the general financing of the corporation under the direction of the Commissioners, and to the disbursement and collection of revenue. The general books of account, such as cash book, ledger and journal, are under Mr. Seath's direct supervision, the cost books being in the control of the Chief Engineer. Mr. Seath is assisted by an Assistant Secretary, Mr. W. J. Fennell, and a bookkeeper.

A summarized statement of account, certified by independent auditors, is submitted annually to the Department of Marine and Fisheries, copies of which will be found in the annual reports published by the Commissioners.

Mr. Seath has also charge of the Paymaster's and Wharfingers' Departments, and the supervision of the Wharfage Inspection and Wharf Clerks, whose duties may be described as follows:—

Paymaster and Wharfinger.

This department is in charge of Mr. R. A. Eakin, who is directly responsible to the Secretary-Treasurer. He is assisted by an Assistant Paymaster, Mr. D. Stewart, and an Assistant Wharfinger, Mr. H. Sym.

The duties of these officers comprise the disbursement of pay rolls and the collection of local dues, rentals of spaces, local commutation dues, &c.

Pay Rolls.

The Paymaster receives from the Secretary-Treasurer the certified pay rolls of the entire organization with cheque in his favour for the amount of the rolls.

The rolls relating to unskilled workmen are payable weekly and the remainder semi-monthly.

The cheque is cashed and the amount due the individual employees put up in pay envelopes, on the face of which are noted the employee's name, number and amount due. The Paymaster visits each department with Assistant Paymaster and a constable, and the employees are paid in the presence of the foreman or timekeeper of the various departments.

When a pay list is discharged the Paymaster certifies as to the individual amounts in the following form:—

'Each of the above men was individually paid by me the amount opposite his name.'

The administrative staff sign the pay rolls individually in acknowledgment of the receipt of their salary. All officers and employees are paid in cash, excepting the Chief Engineer and Secretary-Treasurer who are paid by cheque.

We enquired into the matter of unclaimed wages and were informed that there were very few amounts outstanding. On further investigation we found that on the 9th March last there were 26 unopened pay envelopes amounting to $199.91 in possession of the Paymaster, all of which related to the year 1912, these envelopes remaining in the possession of the Paymaster until called for. We would point out that the certificate appearing on the pay rolls covering these envelopes states that these sums had been paid. All unclaimed wages should be handed to the Treasurer's Department for payment and the amounts certified as paid on the roll should be those actually disbursed on the date of payment.

In the case of payment of wages in advance, funds are usually provided by the Secretary-Treasurer and sometimes the cash is taken from the wharfage dues collected, the Paymaster later reimbursing himself from the pay roll cheque.

Collection of Local Wharfage Dues, &c.

The Paymaster in his capacity as Wharfinger collects all dues, rentals, commutations, &c., levied in connection with cargoes of local vessels inwards and outwards.

These dues are handed over to the Secretary-Treasurer from time to time and a settlement is made between the Secretary-Treasurer and Paymaster once a month. The Assistant Wharfinger, during the season of navigation, visits the wharves each morning and reports the various arrivals and departures during the twenty-four hours preceding; particulars of the vessels are recorded in a register showing the tonnage, nature of cargoes, &c. Under a penalty the agent or master of each vessel is required to attend at the Wharfinger's office and fill in a declaration form giving a description and the amount of his cargo. Payment of dues is either obtained at the time of declaration or from the consignee. The Paymaster gives a numbered receipt for payment and retains the stubs of the receipts which serve as his cash book.

Commutations and rentals of spaces are billed for usually once a month by the Paymaster and the amounts are handed to the Secretary-Treasurer.

As a matter of internal check it is undesirable for the Paymaster to be responsible for both the receipt and disbursement of money, more particularly if he does not hand in his receipts intact daily. We would suggest that the office of Wharfinger be entirely separated from that of the Paymaster, or as an alternative that the Wharfinger should make out a slip certifying as to the correctness of the dues, &c., which would be handed to the person making payment, who would present this slip with the cash to a cashier attached to the Treasurer's Department.

Customs Clerks.

Two clerks, Messrs. A. E. Beauvais and P. V. Seath, act as Inspectors of Transatlantic and Maritime Wharfage and have office accommodation at the Customs Department.

Wharf Clerks.

Two clerks are employed on the wharf in connection with the loading and unloading of vessels.

CHIEF ENGINEER.

The Chief Engineer, Mr. F. W. Cowie, is in direct charge of the land and river construction work and the operation of the various harbour facilities excepting the harbour railway. He is assisted in so far as construction and maintenance work is concerned, by a resident engineer, Mr. A. D. Swan, and five Assistant Engineers.

Mr. Cowie is responsible for the estimates submitted and the distribution of the expenditures to the various jobs. He has also direct charge of the records kept in connection with construction and maintenance expenditures and the timekeepers and storekeepers report to him. At the end of June, 1911, the employees directly under this department aggregated about 1,700 men, of which 700 were engaged in the construction of Elevator No. 2.

Cost Department.

The accountant to the Engineer, Mr. Geo. Smart, has general charge over the records kept in connection with construction and maintenance both at the main office and the shops, but the clerks employed outside the main office are not directly responsible to him. He is assisted by two clerks.

Pay Rolls.

The construction and maintenance pay rolls of the land works are made up by the accountant from the timekeeper's books and he checks the pay rolls of the river works, as to the rates, extensions and footings. He certifies to the correctness of these pay rolls and forwards them to the Chief Engineer for approval. The daily statements of labour expended are received and posted daily by the bookkeeper to the debit of the various jobs and each week the total of these daily statements is agreed with the amount of the pay rolls.

Materials.

All invoices for materials purchased for construction and maintenance are received and approved by the accountant on behalf of the Engineer. A record of these invoices is kept in memorandum form and postings are made direct from the invoices in the cost ledger. The invoices are thereupon returned to the Secretary-Treasurer's Department for payment. Daily statements of issues from stores are received and posted to the cost ledger.

Cost Ledger.

The accounts kept in this ledger may be grouped under three main headings:—

Inventory or Operating Department accounts, such as machine shop, sawmill, &c.
Construction accounts.
Maintenance accounts.

The charges to the various construction and maintenance jobs may also be grouped as—

Direct labour.
Indirect labour and expense, which is divided between engineering burden and departmental burden.
Direct material charges.
Indirect material charges or issues from shops.
Debits made by the Secretary-Treasurer's Department, independently of the Engineer's Department.

The sales of scrap material, which are relatively small, are made by tender. Adjustments are made at the end of the year bringing the book inventory figures into accord with the physical inventory. The indirect labour and expenses are distributed over the various jobs by charging percentages on the direct labour, these percentages varying according to the department, the machine shop burden being about 50 per cent of the direct labour, and that at the shipyard about 30 per cent of the direct labour.

With regard to the salaries of the Chief Engineer and Superintending Staff, these are apportioned over the various jobs on the basis of gross cost, maintenance jobs bearing their proportion.

The cost records at present appear to be carefully kept and the system of charging the construction accounts well carried out. Some changes in the system could, however, be made with advantage.

Machine Shop and Shipyard.

We visited the machine shop and shipyard plant and examined the accounting methods and the system in force for recording the delivery and supply of materials and recording the time of the employees.

Generally speaking we found the records up to date and well designed to safeguard the interests of the Commissioners. We give below a brief outline of the duties of these departments and the methods employed.

The plant consists of a machine shop fitted with lathes, planes and other necessary tools, storehouse, pattern shop, paint mixing shop and carpenters' shop, the latter being attached to the shipyard section of the work. The shops are located on the Guard Pier which is virtually reclaimed land.

The object of the plant and equipment is to carry out the necessary repairs for dredging, harbour fleet, building scows and dredges and providing a base from which the fleet is supplied. The shops are in most active operation in the winter, many of the mechanics and carpenters, &c., forming part of the crews of the fleet in the summer.

The direction of this part of the work is vested in Captain Yale, who reports to the Chief Engineer, and he has an assistant who superintends the construction work. Mr. Earle is in charge of the stores and the recording of the time of the employees, and he is assisted by two clerks.

The responsibility for repairs and construction work lies largely with Captain Yale who submits estimates from time to time to the Chief Engineer for approval. After approval a duplicate of the estimate is turned over to Mr. Earle who gives it an estimate number and enters it in a subsidiary cost ledger kept at the shops. In addition to estimates there are standing orders for small repairs. Estimates over $50 must be approved by the Engineer.

Requisition for the Purchase of Material.

The storekeeper makes out requisitions for supplies in triplicate which are approved by Captain Yale. One copy is forwarded to the purchasing agent, and one to the Chief Engineer. As a general rule all supplies, excepting large direct orders, are passed through the store accounts.

Checking of Supplies Received.

When goods are received they are entered in a goods received book and checked against the triplicate of the Purchasing Agent's order. When the invoice has been approved by the Purchasing Agent, the price is entered in the stock book and the invoice initialed as to the receipt of goods and forwarded to the Engineer's Department.

Stores.

The stores are kept under lock and key, and it would appear that no one has access except authorized individuals. The storehouses are accommodated with bins and receptacles for keeping the various kinds of stores separate. All bins are tagged, and when practicable bin cards are kept.

The store ledger is kept in quantities so that the amount of stock on hand of any class of active supply can be readily ascertained and a minimum and a maximum quantity to be carried is established. Inventories of supplies are stated to be physically taken whenever the supply on hand of a particular class of goods runs low.

Physical inventories are now taken at the end of each year, and improvements have been effected in the system in force from time to time within the five years under examination.

Requisition of Supplies.

Requisitions on the store must be initialed by a foreman and the employee receiving the supplies must sign in full for their receipt.

The requisitions are priced out daily by the clerks and a statement of issues duly priced and extended and approved by the storekeeper, is sent daily to the Cost Accountant of the Engineer's Department, where, as already noted, they are posted daily to the debit of the various construction or maintenance jobs in progress.

Recording and Distribution of Time of Employees.

In the machine shop and shipyard every employee is required to ring up on a time clock four times each day in the presence of the timekeeper or assistant. The time clerk visits the men during working hours and hands them slips or time tickets on which particulars of the work on which they are engaged are entered. These slips are signed by the foreman and returned to the time clerk each evening. The next morning the timekeeper checks these slips with the time clock list, making any necessary deduction on account of late arrival, &c., and he draws the attention of the employee to such correction. The time clerk then prices out the time tickets and enters them to the debit of the different estimate numbers, and at the same time makes out a daily report of wages by job numbers which is sent to the Cost Accountant for entry in the cost ledger.

If a man leaves the Commissioners' employ before pay day he receives a slip which is approved by the timekeeper and countersigned by the Engineering Department. His wages are paid by the Paymaster on presentation of these slips.

The authority for the employment of labour is given by Captain Yale.

Fleet.

In the case of crews of vessels the captain of the dredge or vessel is the timekeeper, subject to the supervision of the general timekeeper.

Coal Barge.

This barge is in charge of a foreman, Captain J. Smith. It is used to convey coal to the fleet during the summer months.

Harbour Yards.

This department was formerly in charge of the Superintendent of the Wharf Stock Department, but since March 1, Mr. J. A. Masse has been appointed to the work. He is assisted by a storekeeper and assistant storekeeper.

The Superintendent has general supervision over the repairing of tools used in construction and maintenance.

Authorizations or orders for work in this department must be approved by the Chief Engineer. When an estimate is approved a job number is allotted and the particulars of the work are entered in a cost ledger kept in this department.

Supplies.

Requisitions for purchases are made in triplicate on the Purchasing Agent, one copy being retained by the storekeeper. All goods upon receipt are entered in a stock book and when the invoice is received the receipt of the goods is acknowledged thereon and the prices entered in the stock book.

Requisition for deliveries of supplies are made out in duplicate and are approved by the foreman. The employee receiving the goods signs the requisition.

In the case of tools which are largely used on the land works a system of charging each workman with tools issued is maintained by means of brass checks, which works satisfactorily.

Daily statements of issues to various jobs, priced and extended are sent to the Engineering Department's Accountant.

Physical inventories of all supplies and tools on hand are taken once a year, and those are stated to be written down to their actual value.

Labour.

A small time clock is kept in this department, and the clock slips are checked with the daily time book. Daily statements of labour chargeable against the different jobs are forwarded to the Engineering Department, and these are checked up with the weekly pay rolls which are prepared by the timekeeper, and approved by the Superintendent.

Timber Boom and Sawmill.

Mr. W. R. Luman is superintendent of the mill and boom, and his staff consists of two men, a timekeper and an office clerk who are paid by the day.

The superintendent has charge of requisitioning the Chief Engineer for supplies required, certifying as to the correctness of quantities received at the boom, and also passing upon the grade and quality of the lumber. He also has charge of the operation of the mill and engages the labour.

The equipment was purchased in 1908 for $6,000, and has since been considerably improved. The mill is equipped with three circular saws and a permanent timber boom is adjacent to the mill where delivery of rafts is accepted.

No proper costs or statistics of operation are kept, but in order to obtain an idea of the work we totalled some weekly returns which serve to indicate the volume of business done in 1911.

Purchases	5,000,000 ft. B.M.
Cut	5,900,000 ft. B.M.
Mill wages (excluding boom)	$10,152

The Manager estimates that the mill cost per thousand feet for labour, &c., to be about $3.

The lumber is requisitioned by foremen on the approval of the Engineer in charge of the works, the lumber being usually taken away in scows or by tugs. This lumber is charged to the various departments at fixed prices which are claimed to be below market price. The saw-mill showed a profit of about $10,000 in 1911 which was apportioned to the credit of various jobs.

The supplies for the mill are requisitioned from the machine shop, and the time is kept by Mr. Luman's assistant. Daily returns both of labour and issues of lumber are made to the Engineering Department.

Wharf Stock.

Mr. Beauregard, the cost clerk is in charge of this section of the work, and his duties consist of comparing the cost of jobs with estimates and so effecting a check on the foremen who are responsible for the goods they receive from the stores. He also has charge of the stocks of cement, stone, sand, &c.

Harbour Repairs and Maintenance.

This section of the work is in charge of Mr. W. Porteous who reports direct to the Chief Engineer on the miscellaneous repairs and maintenance to be carried out on the land works, and he also inspects the work of the gangers.

Tarte Pier Sheds.

Certain sheds are in course of erection at this pier under contract and a representative of the Chief Engineer, Mr. L. DuPlessis, is engaged to look after the work.

ELEVATORS AND CONVEYORS.

This department has charge of the handling and storing of grain in the elevators. It is managed by a Superintendent, Mr. J. Nehin, and an assistant, Mr. J. P. McLean, who report to the Chief Engineer as to the operation and to the Secretary-Treasurer for all accounting records kept in connection with the storing of grain and the collection of revenue. The plant consists of an elevator (No. 1) equipped with an extended system of conveyors to the wharf sheds. A second elevator is in course of construction, but it is not expected that this will be ready for use before June next.

In addition to the above-mentioned Superintendent, the permanent staff consists of one clerk, three electricians, three sworn weighmen, two firemen and ten mechanics. When the elevator is in full operation during the summer months, additional labour is engaged as required.

The grain is received from either barges or railroad cars and is delivered to outgoing steamers or cars for local delivery, as required. For particulars as to the quantities handled we would refer you to the statement of elevator revenue (Exhibit 6); the tariff is set forth in by-law No. 104.

Storage Methods.

For the purpose of illustrating the system in force we outline below the practice followed in handling a grain shipment. When a cargo of grain is received a notice from either the consignor or captain of the transferring vessel is received by this department advising the quantities of grain to be stored, with bill of lading stating the quantity and grade of the grain. A weighman is thereupon assigned to the work of unloading and weighing the shipment, the grain being weighed at the top of the elevator before it goes into the allotted bin. The weighman then makes a report in a tally book as to the quantity received and when stored, which report the Superintendent initials before it is recorded by the bookkeeper. A storage number is allotted to the shipment and it is entered in a stock book and a delivery book. A report giving the total bushels stored is sent to the Secretary-Treasurer, this report being signed by the Elevator Superintendent. The Secretary-Treasurer reports the receipt of the grain to the consignor.

Requests for delivery are received by the Secretary-Treasurer, who forwards the request to the Superintendent. The Superintendent in turn checks it with the stock book and then hands the requisition to a weighman who weighs out the grain and records the delivery in a tally book kept for this purpose. The tally book is handed the bookkeeper who records the quantities delivered in his stock book. A detailed statement of deliveries is made out daily, which is forwarded to the Secretary-Treasurer and he renders bills for the handling and storage charges.

So far as the Superintendent's records are concerned, they appear to be well kept and the system of recording and checking would appear to be adequate.

Daily and weekly statements of grain handled are made out for the Commissioners and a weekly sworn report is sent to the Department of Trade and Commerce at Ottawa and to the Manitoba Grain Inspection Division.

Supplies and Repairs.

Only small quantities of supplies are kept on hand, requisitions being made in triplicate, on the regular forms, to the Purchasing Agent after approval of the Superintendent. In emergency cases repair supplies are sometimes ordered before the

requisition is forwarded to the Purchasing Agent. Requisitions are also made on other departments. No cash is handled at the elevator.

The electric power is furnished by contract by the Montreal Light and Power Company. The rates have been reduced in the past two years as will be seen from examination of the revenue account.

Labour.

The time books are kept by the foreman and scrutinized by the Superintendent. These time books are sent to the time-keeper of the Engineer's Department where the pay-rolls are made up. The Superintendent engages the men, but before doing so he has to apply to the time-keeper for a brass check of identification for payment purposes.

During the winter the operating staff is engaged largely in repair work.

Sheds Maintenance.

This section of the Engineer's Department is in charge of two foremen, Mr. Clermont and Mr. Clifton, and is maintained to look after the general repairs and condition of the sheds.

FLOATING ELEVATORS.

This department is virtually a division of the Elevator Department, and is in charge of Superintendent J. Hunault, who reports to the Chief Engineer so far as the vessels are concerned. The weighmen, who are under the control of Mr. Nehin, report through the elevator office to the Secretary-Treasurer.

The plant originally consisted of 17 floating elevators which were purchased for $100,000 in the early part of 1910. The elevators are used for transferring grain from one vessel to another and are consequently only in operation in summer, many of the crew being engaged on repair work during the winter months. All supplies for repairs, &c., are obtained through the machine shop. The charges for transferring grain are set forth in By-law 103.

Handling Methods.

Orders for the transfer of grain are made out on the special forms which are signed by the shipper. These orders are handed to the weighmen who proceed to make the transfer and who report to the elevator clerk as to the quantity and kind of grain transferred and the time consumed in handling. The elevator clerk records transfers of grain in a delivery book and notifies the Secretary-Treasurer of each shipment, and in addition he makes out a weekly and monthly report of transfers. The Secretary-Treasurer sends out the bills to the shipper and collects the charges.

Labour.

The time is kept by Mr. Hunault, who reports to the Engineering Department timekeeper, and the rolls are made out in the same manner as those for Elevator No. 1.

TRAFFIC DEPARTMENT.

This department is in charge of a superintendent, Mr. J. Vaughan, who reports direct to the Commissioners as to operations and to the Secretary-Treasurer as to earnings. He is assisted by a yardmaster, Mr. W. Goldsmith, and there is an office force of two clerks.

The operating staff consists of engineers, firemen and yardmen and checkers. This department operates about twenty-one miles of switching tracks located on Commissioners' property along the water front. At December last the equipment consisted of five switching locomotives and two additional locomotives have been purchased during

the current year. A separate storehouse is maintained for this department and one of the yardmen under the yardmaster is in control of the supplies.

The locomotives of the Commissioners alone operate over these harbour tracks, all cars being hauled from the various railroad yards and returned by the Commissioners. Some cars are also hauled between railroad yards over the tracks of the Commissioners. The tariff and conditions for handling cars are set forth in By-law No. 96. We would refer here to the Revenue Statement of this department (Exhibit 5) wherein it will be seen that in the years 1908 and 1909 the charges for freight on fuel exceed or equal the charges for fuel itself.

Method of Checking Cars.

When cars are delivered, a train report giving out number is made out in duplicate by the conductor of the delivering railroad, which is signed by the representative of both the railroad and the Commissioners. Each evening the checkers send a copy of each report to the Traffic Officer, the railroad retaining the original. The clerk records the number of the cars and the switching charges according to whether the car is loaded or unloaded. When cars are returned the checker makes out a train report in duplicate which is dealt with in a manner similar to the report of incoming cars.

From the office records information can readily be obtained showing the cars remaining on the wharves.

The bills against the railroads for switching and demurrage charges are made out by the Traffic Department clerks and handed to the Secretary-Treasurer for collection, a duplicate copy being retained in the Traffic Department.

Supplies.

All requisitions for purchase of supplies such as oil, waste, coal, &c., originate with the yardmaster and are approved by the Superintendent and forwarded to the Purchasing Agent.

When supplies are received the yardmaster checks and approves the invoice which is returned to the Secretary-Treasurer ready for payment. A requisition has to be made in duplicate for delivery of supplies, the requisition being signed by the yardmaster and the locomotive engineer receiving the supplies. One copy of the requisition is sent to the Traffic Department and the other retained on the department files.

Repairs to tracks are carried out by the Engineering Department upon requisition of the Traffic Superintendent. Repairs to locomotives are now made by outside contractors, but it is expected that when the locomotive shop is completed all repairs can be carried out by the department.

Labour.

Daily time tickets are made out in duplicate, the original being sent to the Traffic Superintendent's office where it is recorded in a time book.

At the end of each two weeks period the pay roll is made out in the Superintendent's office and sent to the Secretary-Treasurer, who provides for payment and forwards it to the paymaster.

HARBOUR MASTER.

The Harbour Master, Mr. J. McShane, who is assisted by a Deputy Harbour Master, has charge of the general supervision of the shipping traffic at the port. He keeps a record of all vessels arriving at and leaving the port, with a description of each.

CONCLUSION.

Our investigation of the transactions of the Commissioners for the five years ending December 31, 1911, has been of an exhaustive character and in concluding our report it may be convenient to summarize the principal results of our inquiry as follows:—

(1) We have satisfied ourselves that the cash disbursements have been made in the regular course of business and are supported by invoices certified by the proper officials as to price, clerical accuracy and receipt of the goods or authorization of the expense, except in a few minor instances where the vouchers have apparently been mislaid.

(2) We have found that the salary lists and pay rolls have been certified by the heads of the various departments and proper safeguards appear to have been adopted in the keeping of time of employees and in the payment of salaries and wages.

(3) While we are unable to definitely state that all local wharfage dues, rentals, &c., have been collected (as the system of accounting does not admit of a satisfactory verification of these receipts) nothing has come to our notice during the course of our investigation which would throw doubt on the honesty of those handling the cash.

(4) In the case of the large purchases of materials and supplies it has been the practice of the Commissioners to call for tenders and to award the contracts to the lowest bidders fulfilling the requirements specified. In regard to the purchase or construction of certain special equipment such as elevators, dry dock, &c., considerations as to efficiency and prompt delivery are such material factors that the award of the contracts is clearly a matter of executive judgment which is outside the scope of our report.

(5) The safeguards at present installed should provide for the correct distribution of materials and supplies, and nothing has arisen in the course of our investigation to indicate irregularities.

(6) Generally speaking the books and accounts have been carefully kept, but the accounting system does not fully meet the requirements of the business, and should be improved in order to provide for an effective check over the work of the various departments and a more complete analysis of the expenditures.

(7) The present organization is defective in the following respects, firstly, that the Secretary-Treasurer, who has charge of both the collection and disbursement of moneys, has also the direct control of the general ledger and certain principal accounting records; secondly, that the Chief Engineer who prepares and is responsible for the estimates has control of the distribution of material and supplies and the keeping of time, and also the engineering cost records.

This plan of organization does not, in our opinion, provide an effective system of internal check, and we would recommend that all the accounting and cost records of every department be placed in charge of a Chief Accountant or Comptroller, who should have the entire responsibility for all the accounting, including the preparation of bills, certification of vouchers, timekeeping and store records, and he should submit periodical statements of account and statistics to the Commissioners and to the other officials as required; he should be directly responsible to the Commissioners and all employees engaged on the accounting records should report to him.

The Secretary-Treasurer should be responsible for the collection and disbursement of all cash and the general financing of the corporation; in addition he should have charge of the general secretarial duties as at present.

The Chief Engineer should be in complete charge of all construction and maintenance work and the estimates prepared in connection therewith, and he should be furnished with information with regard to the actual cost of the work by the accountant.

(8) The present departmental costs are incomplete in that no consideration has been given to the question of accruing depreciation and the apportionment of general and administrative expenditure.

We have pleasure in stating that we have received the cordial co-operation of the officers and employees of the Harbour Commission, and that every facility has been afforded us in connection with our investigation.

Respectfully submitted,

PRICE, WATERHOUSE & CO.

PUBLIC SERVICE COMMISSION

1912

SPECIAL REPORTS ON DREDGING

Public Works Department

To His Royal Highness the Governor General in Council.

May it Please Your Royal Highness:—

The Public Service Commission have the honour to present a report of progress in an inquiry they are holding into the matter of dredging by and under the Department of Public Works.

In the decade between 1900 and the termination of 1910, about $19,000,000 was expended by the Department in dredging, not including the amount for purchase and improvement of departmental plant. In the last seven years of the period, the annual expenditure increased rapidly and continuously, and in 1910 it amounted to more than during the first four years of the decade. In the Maritime Provinces, in Quebec, and in Ontario, dredging is done each year in part by contractors and in part by departmental plant, and inquiry into the various expenditures has proven to be a task requiring much time, persistency and concentration on the part of the Commission and those persons whom it has employed in the investigation. Much remains to be done, but it is apparent that certain reforms should be undertaken at the opening of the dredging season for the current year, and, therefore, the Commission have considered it urgent to present a report.

By departmental regulation, all matters relating to dredging are under the supervision of the Assistant Chief Engineer of Public Works. The present occupant of this office has held it for little more than one year, but he has during that time made an earnest endeavour to procure the adoption of improved methods. Recently, he decided to withdraw from the Public Service, but, at the request of the Minister, he has consented to retain his office and the Commission feel that his experience will enable him to give good public service. They have had his evidence and opinion to assist them in their inquiry.

The Assistant Chief Engineer has a small staff in his office at Ottawa, directly under his personal control, and subordinate to him there is also what is known as the Dredging Branch of the Department, presided over by the General Superintendent of Dredging, with an Assistant Superintendent, and inside and outside assistants. This Branch, as now constituted, has no other work than the care and control of departmental dredging plant. This it exercises directly in respect of the plant in Ontario and Quebec, and through local superintendents in respect of the plant in the Maritime Provinces and British Columbia. In the Prairie Provinces the Resident Engineers superintend the plant.

The Commission find that the existing Assistant Engineer's staff requires some rearrangement to enable it to deal efficiently with dredging generally, and especially in relation to contract dredging. They also find that the organization for the care and control of departmental plant is very unsatisfactory. The offices now used are inadequate; those occupied by the General Superintendent and his subordinates should be abandoned, and these officers should be brought into closer contact with the Assistant Chief Engineer.

The present General Superintendent is about seventy-three years old, and he is now and has been for some time unable by reason of illness to attend to his duties. The Commission understand that he has been an efficient officer. If it is deemed desirable to retain his services, the Commission feel that he should in reality occupy a consulting position only, and should relinquish all active participation in the management of the Branch. It seems to the Commission that a person with good executive qualities, having some practical knowledge of dredging, and preferably one familiar

with dredging machinery should be appointed in his place as General Superintendent, and that under him a very complete reorganization of the Branch should take place. A very inadequate and unreliable attempt at cost accounting now made in the Branch should be abandoned, and a complete system installed.

The Commission understand that Mr. T. H. Schwitzer has been named for appointment as Mechanical Engineer for the Branch. He has been for some time the Mechanical Superintendent of the Printing Bureau, and is now engaged in making an inquiry for this Commission at Sorel Ship-Yard. The Commission think that Mr. Schwitzer may, after some experience in the Dredging Branch, prove to be a proper person for the position of General Superintendent, the duties of which position he might discharge temporarily, with a view to his permanent appointment should his work prove in every way to be satisfactory. They do not think, however, that a Mechanical Engineer as well as a General Superintendent will eventually be needed in the Branch.

The system of management and accounting differs somewhat in the Maritime Provinces from that in vogue in the other parts of the Dominion, and it is here that the need for reorganization is most urgent. In the Maritime Provinces there are two Superintendents, one at St. John, N. B., and the other at New Glasgow, N. S., both receiving $2,000 per year. The departmental plant in these provinces is valued at about $1,500,000, and includes ten dredges, three tug-boats, and scows, etc. One of the dredges is valued at about $700,000. All accounts are payable at the office in St. John, N.B. The local Superintendent there, Mr. Scovil, has a credit given to him for that purpose from time to time by the Department here. In regard to the Provinces of New Brunswick and Prince Edward Island he has also wide duties; hiring officers and crews, purchasing supplies, and exercising control over the movements of dredges. In regard to Nova Scotia, these latter duties are performed by the Superintendent at New Glasgow, though his accounts are payable at St. John. The expenditure in the dredging season of 1910 for towage by private tugs in the Maritime Provinces amounted to $62,454.40, the contracts being made by the local Superintendents. This was in addition to the cost of operating departmental tugs and dredges. Vouchers for the payments by the office at St. John are sent in monthly to the Department in Ottawa, but the credit to the office is accounted for annually only. Purchases should be made by tender and contract more largely than at present, and better supervision should be exercised concerning the dredges and their movements. The practice of paying the accounts at St. John should be continued, but a closer supervision should be exercised from the Department at Ottawa.

The Commission find that it will tend to efficiency to have one Superintendent only for the Maritime Provinces, with an office at St. John, and that a suitable man should be appointed. An inspector recently appointed from Prince Edward Island should be made responsible to the local Superintendent for general service.

An Inspector is already attached to the office at St. John, N.B. It is desirable that the duties of Inspectors should be widened, by requiring them not merely to examine machinery, as at pre-ent, but to inquire and report upon the movements of dredges, the discipline of their crews, and generally any matters affecting their usefulness. Two inspectors may prove insufficient for this work, in which case the number should be increased.

The Assistant Chief Engineer says that the present local Superintendent at St. John is not qualified for the position he now holds, and much less so for the wider authority which should be exercised by one local Superintendent for the Maritime Provinces. He does not appear to exercise effective control over his subordinates, lacks initiative in combating abuses, and does not show zeal in carrying out reforms ordered by the Head Office. In 1911, the local Superintendent in Nova Scotia arranged for the services of a tug-boat, neglected to place her at work or to cancel the engage-

ment, and deceived the Department at Ottawa as to the real facts, the final results being that in October, 1911, over $3,000 was paid for hire of a tug which was not used even for one day. Other causes exist for dissatisfaction with this office.

The Commission find that neither Mr. Scovil nor Mr. Graham could efficiently perform the duties of local Superintendent for the Maritime Provinces.

CONTRACT DREDGING.

Considerable capital is required for individuals or companies to procure and operate an efficient dredging plant. Where keen competition for contracts exists, dividends are not likely to be either large or certain. It is expensive to move dredging plant frequently or for long distances, for which and other reasons it is more or less local in its very nature. Where work is to be done at various places at the same time, few contractors have sufficient plant to undertake many contracts. Where there is much dredging to be done at one place in one season, few contractors have plant enough to undertake it. For these and other reasons, a very strong tendency exists towards monopoly, merger or collusion. The Commission are persuaded that less actual competition in contracting than is desirable exists in Canada at the present time. Competition is frequently more apparent than real. Tenderers often bid for work at more places than they could attend to if given contracts for all, because when tendering they do not expect to be the lowest in every case. Their inability to perform all the work they are lowest tenderer for is sometimes advanced as a reason for giving a contract to one who is, in fact, not the lowest tenderer. It is not unusual to give a contract to one person or company at prices quoted by another, the explanation given being that the lowest tenderer has been given all the work he has plant to perform. Within recent years certain contractors have been told to commence operations before tendering, upon the understanding that the price they would receive would be that which was quoted in the lowest tender afterwards received. This fact being well known, the only tender received has naturally been that of the contractor doing the work. The condition, hitherto insisted on, that the plant to be used should prior to or at the very time of tendering be registered in Canada has probably restricted competition, and the same result has, perhaps, been brought about sometimes by restricting too much the period between calling for tenders and the time fixed for the commencement of work.

The Commission are of opinion that competition can be increased, and dredging be made less costly to the public, while at the same time assuming more and more the condition of an industry instead of a gamble, by the adoption of a sound and consistent practice. They suggest that more care than heretofore should be taken to ascertain the extent of dredging that will be required at any particular place; and that when it is so considerable that more than one season's work will be necessary, tenders should be asked for the whole work, or for the work required for a period of years. This is being done to a limited extent. The objection that Parliament makes grants annually only, would be no stronger than in the case of public buildings, which are seldom completed in one year. Parliament should be apprised at the outset of the extent of the work to be done, and that further yearly amounts will be needed. Advertisements calling for tenders should be published in the beginning of the year, and the successful tenderers should be notified early enough to permit them to acquire all necessary plant before the time to commence work has arrived. It is said that a practical objection on this point is, that until Parliament has voted supply, the Department cannot safely award contracts, but this should be met by adopting the practice of asking Parliament to deal with dredging votes early in each session, for they are subject to special circumstances, and the reason for early votes could easily be demonstrated.

It sometimes happens that only one tender is received for dredging at a particular place; a number of instances of this kind happen almost every year. It has then to

be considered whether any contract should be awarded, and it would appear as if in many instances contracts have been awarded at high prices simply because no lower price was tendered for. It seems to the Commission also that even where competition apparently exists, the prices contracted for are frequently higher than they should be. Sometimes the prices asked and given are much higher than resident engineers have estimated to be fair and reasonable, and it has even happened that resident engineers have certified accounts for payment as fair and reasonable at prices much higher than their own estimates, giving reasons for their change of opinion that might reasonably be open to the suspicion that they were made to suit the exigency. The material to be dredged is so varied, the difficulties resulting from location are often so great, and the matters to be considered in each case are so numerous, that the Commission readily perceive and willingly admit that the subject is one demanding the exercise of great discretion. Nevertheless, they feel that a proper solution would often be easier, if the Department were provided with statistics and other data which not only could but should be procured. The kind of material to be dredged, and the difficulties of location in each case, should be carefully reported upon in advance. Material can be classified, and with experience the actual cost of dredging each kind could be calculated very closely. The Department should adopt for itself a standard of prices for kinds of material and of location by which it should test the fairness of prices asked by tenderers. No contract should be awarded if these prices exceed the standard fixed by the Department, unless after careful inquiry and special report, special circumstances justify an excess rate. In preparing for the work of a season, it has been the practice to plan that departmental plant shall be used at certain places, and tenders asked for others, with the result that it is sometimes alleged that a high tender must be acceded to or the work be delayed. It would be wise, it is suggested, that the Department should not allocate all its plant at the very outset, but that some should be kept in reserve till tenders have been considered, so that if work has to be done quickly for which the prices asked by contractors are too high, departmental plant could be used to make tenderers reasonable.

The Commission find that the creation of a departmental board, which should be convened from time to time to consider matters relating to dredging would be advantageous. Where dredging should be done, whether tenders should be accepted, and many other incidental matters should be passed on by such a board, for the purpose of advising the Minister. Neither the Head nor the Deputy Head should be charged with the task of considering the very many matters of detail and principle of great importance which constantly arise, and on the other hand, the Assistant Chief Engineer, charged with the administration of this work, would be greatly strengthened by the assistance of such a board. Pressure from outside the Department is often exercised, and the head of the Branch thereby placed in a very difficult position, from which he would be often relieved if it were the fact that the questions arising would be passed upon by a responsible and capable departmental board.

TOWAGE OF SPOIL.

Specifications in use fix a maximum of 3½ miles for towage of spoil at the rate quoted in the tenders, and also fix a cent or more per cubic yard of spoil for every additional mile beyond the maximum, any fraction of a mile being paid for as a full mile. The maximum fixed in the specifications does not differ in different places, but is the same in all cases. If the distance towed be less than 3½ miles, the full rate fixed for dredging is paid in full, though the towage may be for only one mile or less. Large amounts have been paid for towage over 3½ miles under this provision; and in most instances, the distances towed have been little in excess of the maximum, thus suggesting the thought that the towage has exceeded the limit by a fraction merely to give a claim for the full mile allowed. The Commission find that it should be

specified that any fraction of a mile less than one half shall not be counted, and any fraction of a mile more than one half shall be paid for as a full mile.

The specifications to tenders have hitherto contained the following clause:—

"The dredges which are intended to be employed on this work shall have been "duly registered in Canada at the time of the filing of this tender with the Depart- "ment, or shall have been built in Canada after the filing of this tender."

It has been said that this condition was intended to protect Canadian capital and labour as a national policy. Its precise form has not been necessary to that end, which could have been as well secured by the proviso which the Commission now suggest should replace it. It is possible and even probable that by requiring that tenderers should be owners of dredging plant before they tender, persons and companies have been deterred from tendering, who were financially able and quite willing to purchase, after the acceptance of their tenders, all the plant which should prove to be necessary. For these and for many other reasons, the Commission find that it is desirable to amend the specifications in use by substituting the following for the provision referred to:—

"Dredges and tugs not owned and registered in Canada shall not be employed "in the performance of the work contracted for."

The change if adopted should be specially referred to in advertisements for tenders, and while it may be now too late to have much effect this year, the Commission believe that good results will hereafter accrue from the change.

It may be said that this change will give opportunities for speculation in contracts by permitting persons to tender who have no plant, but who will assign their contracts. It is sufficient reply to this, the Commission think, to say that tenders not accompanied by security should not be accepted; that no contract should be entered into unless and until the tenderer has satisfied the Department of his ability to perform it; and that no contract can be assigned without the consent of the Department.

It has been stated to the Commission that the Department of Public Works seldom insists on the forfeiture of security for contracts when a tenderer fails to enter into or a contractor fails to carry out a contract. The Commission feel that no deposit should be returned before a contract is completely carried out, except upon the authority of an Order in Council, and that there should be legislation requiring that all Orders in Council authorizing return of deposits should be placed before Parliament within ten days of the opening of a session.

DREDGING INSPECTION.

The greatest opportunities for fraudulent practices in connection with contract dredging are afforded by insufficient, inefficient or even dishonest inspection, when payments are made by scow measurement. Hitherto the Inspectors have been nominated by the members of Parliament or defeated candidates supporting the Government for the time being, and nomination has almost universally been followed by appointment. The fact that employment as Inspector is only temporary has increased the difficulty of procuring reliable and capable men. The Commission find that appointment as Inspectors should be made on the recommendation of the Assistant Chief Engineer, after great care has been taken to inquire into the record and the qualities of applicants; that written certificates of character, from responsible and reputable citizens, should in all cases be required and filed; and that where large contracts have to be performed, such as at Fort William, Midland, Victoria Harbour and St. John, N.B., yearly salaries should be paid for the services of qualified and satisfactory men.

In concluding this preliminary report the Commission desire to express their very strong feeling that the proper administration of matters relating to dredging

is in a very special degree dependent upon the skill, care and good-faith of the departmental staff. Many questions have to be decided, for which no general rules can be laid down, and subsequent competent criticism is so extremely difficult, that with every precaution which can be prescribed, good results will nevertheless still depend very largely on the ability, the executive capacity and the firmness of the Assistant Chief Engineer and those under him, and upon the extent to which he and they have the support of their superiors in office.

All of which is respectfully submitted.

ALFRED B. MORINE,
Chairman.

G. N. DUCHARME,
R. S. LAKE,
Commissioners.

Ottawa, 3rd April, 1912.

To His Royal Highness the Governor General in Council.

MAY IT PLEASE YOUR ROYAL HIGHNESS:—

The Public Service Commission have the honour to make the following report:—

For some time past the Commission have had under consideration the subject of dredging as carried on by and through the Public Works Department, who placed at their disposal a large number of files and other documents.

On the 3rd April last they presented a report of progress which set forth certain findings which they had been able to make at that time; and on these findings they based certain recommendations, both in regard to that branch of the work which is carried on directly by the Department by means of its own dredges, and in regard to that part of the work which is carried out by private enterprise under contract with the Government.

The number and importance of other matters, which have since been engaging their attention, have prevented them devoting all the attention they would have wished to this question. The absence from the files of much material upon which they must assume decisions were based, as well as of the reasons of the Minister for those decisions, has also been a serious drawback, and prevents them making as complete a report as they would otherwise have been able to do.

Beyond some inquiry into the actual cost of the dredging performed by the Government itself, with its own plant, the Commission have been inclined to leave that branch of the question as it stood when they made their previous report. The present Assistant Chief Engineer in charge of dredging, as it was then pointed out, had only been a short time in office. He is a gentleman who had shown anxiety to improve the service, and the Commission had recommended certain measures, many of which he was already endeavouring to have adopted. Time had to be given for him to show results. The Commission, therefore, confined themselves mainly to a closer inquiry into the conditions under which dredging is performed for the Government by contract, the methods of assigning the work and giving the contracts, and the cost of dredging by contract in comparison with that of dredging directly by the Government itself.

Practically speaking, the duty of dredging the harbours and rivers of the Dominion, wherever commercial interests are concerned, has now come to be looked upon as a matter entirely and solely of Government concern. The Government appears to have assumed the obligation for the dredging required, not only for the improvement of our rivers, harbours and existing ports, but also that which is necessary for the creation of the new ports and new shipping centres, which are being created from time to time by railway and transportation companies. The amount of dredging now done in the Dominion, other than that carried out by, or through the Government itself, is so small as to be a negligible quantity. The position is, therefore, that any private corporation or individual, who owns a dredging plant, is entirely dependent for any returns from that plant upon its employment by the Government. The dredging business is in this respect different from perhaps any other in the country. It is a business in which a considerable amount of capital is required; and from the outset the person engaging in it is confronted with the position that he must either himself get the Government work, or failing this, get his plant used by some one who is more fortunate in that respect. The inevitable result is to encourage the owners of dredging outfits to arrange matters amongst themselves in advance of tendering, and to eliminate healthy competition. It also places an enormous power of patronage in the hands of the Minister in the exercise of his discretion as to the

persons to whom the contracts are to be awarded. That the Minister has exercised personal supervision over this question is quite apparent from the material placed in the hands of the Commission. There are some features in connection with it, which they feel it desirable to touch upon before mentioning the general conclusion at which they have arrived.

MUTUAL UNDERSTANDING BETWEEN TENDERERS.

That persons, who put in what are ostensibly competitive tenders, frequently have an understanding with each other in advance, as to what prices each shall bid, is quite evident on the face of the tenders themselves. The following is a clear instance, though it is not the only one. In 1907, tenders were called for dredging at Midland and Waubaushene, and the Canadian Dredge and Construction Company, and the Penetanguishene Dredge Company each put in separate tenders for the work to be done at each of these two points, the tender of one company being the lower of the two at Midland, and the tender of the other company being the lower at Waubaushene. All four tenders bore the same date, were apparently filled out in the same handwriting, and were enclosed in envelopes endorsed by the same person. That no importance was assigned to this incident is shown by the fact that the contract for Midland was nevertheless awarded to one of these two tenderers.

ALTERNATIVE TENDERS.

That there has been a practice of putting in alternative tenders in the hope that, if one was not successful in getting the contract, the other might be, is evident from more than one instance of both of the tenders appearing on the files. In one case, which may be described here, both tenders were for the same work, dated the same day and filled in and signed by the same firm in the same handwriting. One, which bore the initials of the Minister of Public Works, was for thirty-nine cents scow measurement, and thirty-five cents cast-over; the other, which bore no initials, was for twenty-six cents scow measurement, and eighteen cents cast-over. The contract was awarded to the tender which was not initialed. In the Order in Council the Minister stated that it was the lowest tender; although in fact there was another tender put in on the same day for exactly the same amount, which had been duly received and initialed by the Minister. Several interesting questions are suggested in connection with this transaction. Why were the persons who put in the alternative tender given the contract; and is it not more than a coincidence that the prices they quoted were exactly the same as those of their competitor? Why was the difference between scow measurement and cast-over measurement twice as great in one of their tenders as it was in the other? If they were prepared to do the work for the lower figures, why did they put in another tender at half as much again: and if there had been no competition, would they have got the contract at the higher figures?

LOWEST TENDERS NOT ACCEPTED.

The statement that the lowest tender is usually accepted is not borne out by the files. In the year 1907, out of forty-three contracts entered into by the Government with various firms for dredging in Ontario and Quebec, fourteen were with firms who had not put in the lowest tender. In three of these cases they were not even the second lowest tender. The contracts awarded in these fourteen cases were for prices which averaged thirty-four per cent higher than the lowest tender. One firm tendered lower than any other for work at eight of these places, but did not get any of the contracts. It is true that they got contracts at other points, but this would not appear to be any reason why they should not have been awarded the contract wherever

they were lowest. They had put up their deposits, and these could have been forfeited if they had failed to carry out the work at the prices tendered. There appears, however, to be no record of forfeiture of deposits in connection with tenders for dredging, and putting them up seems to have become a mere matter of form. Unless there be some penalty, the habit will grow up of firms putting in blanket tenders and, after the contracts are awarded, of picking and choosing those which are likely to be the most remunerative.

CONTRACTS MADE WITHOUT COMPETITION.

There appear to have been frequent instances of the Chief Engineer reporting prices to be fair and reasonable, and of contracts being subsequently let at higher prices; and this, in some cases, in the face of vigorous protests by the responsible officials. In some instances contractors have been set to work on the understanding that, if when the tenders were opened theirs was not the lowest, they would accept payment at the price of the lowest tender. Under such circumstances, it is not to be expected that there would be much competition. Apart from this, morever, it would appear to amount to a breach of faith with would-be contractors to advertise for tenders when it had already been decided who was to get the work. Even if persons desiring to tender were not deceived, such a course is calculated to bring the whole system into contempt. Another practice which appeared to be common, was not to accept the lowest tender, but to award the contract to some other firm, provided they would accept it, at the prices of the lowest tenderer. This on more than one occasion resulted in the contractors holding out until they got their own prices.

Altogether the peculiar conditions, which have already been referred to, under which the Government is practically the only employer to whom owners of dredges can look for employment, and the fact that work is generally provided for all available plant, are not conducive to the close cutting of prices. Indeed it would be remarkable if there really was any bona fide competition. This, in the past, has undoubtedly led to many contracts being given at prices which were unduly high, either because there were no other tenders, or such tenders as there were, were not really competitive.

It seems impossible to arrive, with even a small degree of accuracy, at any conclusion as to the principles which governed the granting of many of the contracts in the past; and a comparison of the prices paid for dredging at the same points for a number of years in succession shows an amazing amount of variation.

COMPARATIVE COST OF GOVERNMENT AND CONTRACT WORK.

A reference has already been made to the fact that the Commission has been studying the cost of dredging performed by the Government with its own plant compared with that performed by contractors.

It must not be forgotten that private owners, in addition to cost of operation, wintering, repairs, equipment, superintendence and other expenses, have to take into consideration interest on the capital invested, depreciation and insurance. The Government on the other hand, while taking into consideration the former items, does not include the three latter in its calculations; and in the figures which are given below, so far as the Government plant is concerned, no cognizance is taken of them.

It may be mentioned here that comparisons are possible only in the Maritime Provinces, and in portions of Ontario and Quebec, as these are the only parts of the Dominion where both Government-owned plant and private plant are in operation. West of the Great Lakes all the dredging is done by the Government with its own plant; while on Lake Superior and Georgian Bay, with comparatively insignificant exceptions, it is all done by contract work. The St. Lawrence Ship Channel is done

entirely by Government dredges, which, up to the year 1904, were operated by the Public Works Department; but since then have been under the control of the Marine and Fisheries Department.

The comparative cost of Departmental and Contract Dredging for the four years ending 31st March, 1911, is as follows:—

Dredging—Maritime Provinces—1908-1911.

	Cub. Yards.	Cost.	Average per c. yd.
Departmental	3,705,874	$ 707,790 01	19·1 cts.
Contract	5,933,968	2,839,190 32	47·84 "

At the average price of Departmental dredging, viz., 19·1 cents, the cost of 5,933,968 yards would be $1,133,387.88. A saving of $1,705,802 would therefore have been effected in these four years if Departmental plant only had been employed. It may be noted further that during the present year great economies have been effected in the management of the Departmental plant in the Maritime Provinces, and that results for the future will be much better than in the past.

The following comparisons are given as they deal with the only other localities where both private and Government dredges are used, but they are not of the same value owing to variations in the nature of the work.

Dredging—Lakes Erie & Ontario—1910-11.

	Cub. Yards.	Cost.	Average per c. yd.
Departmental	591,187	$ 59,234	10·01 cts.
Contract	315,845	64,753	20·50 "

Dredging—St. Lawrence River & Tributaries,—1910-11.

	Cub. Yards.	Cost.	Average per c. yd.
Departmental	521,263	$128,325	24·62 cts.
Contract	1,586,710	351,368	22·14 "

Owing to the incompleteness of the Departmental reports, in the figures immediately preceding, and in those next following, it was found necessary to confine the comparison to the last year for which returns are given, viz., 1910-11.

The next comparison deals with dredging throughout the Dominion. It includes the St. Lawrence Ship Channel; but the Prairie Provinces have been omitted as no accurate account has been kept of the amount of material dredged there.

Dredging throughout the Dominion—1910-11.

	Cub. Yards.	Cost.	Average per c. y.
Departmental	9,671,032	$1,189,552	12·3 cts.
Contracts	9,644,671	2,694,336	27·93 "

At the average price of the dredging carried on by the Government with its own plant, the cost of 9,644,671 yards would have been $1,189,597. A saving of $1,504,739 would therefore have been effected in a single year if the Government had owned sufficient plant to do the whole work itself.

An even more striking comparison between the cost of Departmental as compared with Contract dredging is shown by the results in the Harbour of St. John, where Government and private dredges were working side by side. Had all the dredging carried out there by contractors during the last four years, been done by the Department with its own dredges, the saving to the public would have been $1,012,002.

An interesting comparison might also be made between the cost of contract work at Fort William and Port Arthur, and of that performed by the dredging fleet of the Department of Marine and Fisheries in the St. Lawrence Ship Channel. During the last three years, the earnings of the Great Lakes Dredging Company, principally for work at Fort William and Port Arthur, amounted to $1,908,704.56 for 9,718,763 yards dredged, or about 19·64 cents per cubic yard. In the same three years the Ship Channel fleet, under the Government, dredged 17,763,608 yards at a total cost of $1,583,792.82, or 8·92 cents per cubic yard, which is less than half the cost of the Great Lakes Dredging Company's work, although according to official reports a considerable portion of the material dredged in the Ship Channel consisted of 'boulders and hard rock'.

It must be remembered in all these comparisons that much of the work undertaken by the Government dredges is on the smaller and more difficult jobs, and in out of the way localities. It is consequently not at all popular with the contractors who look for the best of what is going. Furthermore, the work performed by the Government plant is usually of a much higher quality. The principal object of the master of a Government dredge is to do a good job; the principal aim of the ordinary contractor is to get financial results. If he can increase his profits by dredging deeper than necessary where the material is good, and scamping the work where the material is more difficult, there is a temptation to do so. Then again, if the Inspector makes a mistake as to the class of material, or the number of scow loads which leave the dredge, the mistake is likely to be against the Government and not against the dredge-owner.

BRITISH COLUMBIA.

In British Columbia all dredging has been performed by a plant owned by the Government, and the quantity of material dredged there for 1910-11 amounted to 1,728,420 cubic yards, of which according to available returns, at least 85,000 cubic yards were rock. This was performed at a total cost of $177,834.75, or an average of 10·28 cents per cubic yard.

It must not be forgotten that wages, food, and other expenses are higher in British Columbia than in any other part of the Dominion. In spite of this fact however, the cost of dredging there compares very favourably with contract work in Eastern Canada.

CONTRACTOR'S PROFITS.

The present system of letting contracts to private dredge owners at the rate of so much a cubic yard, according to the class of material to be dredged, is of recent date. Up to the year 1905 the general practice had been to pay for the services of dredges by the hour. The amount most commonly paid was $8.00 an hour, though there were instances of $10.00, or even $12.00 being paid. The number of working hours a day averaged about ten, so that the amount earned by a dredge ranged from $80.00 to $120.00 a day. Coincident with the change, the Government ought, in advance of tenders being called for, to have compiled the most accurate information obtainable regarding the amount and nature of the material to be dredged, the difficulties likely to be met with, and the estimated cost. Contracts ought not to have been awarded unless the prices reasonably conformed to this estimate, and payments ought wherever possible to have been based on place, instead of scow, measurement. This does not appear to have been done and the change in the system has proved to be considerably in favour of the contractors.

A perusal of the Auditor General's Reports, and the long list of firms now engaged in the business, lead to the belief that it has been extremely remunerative to some of the contractors. One or two examples of this may not be out of place. In the spring of 1907, in St. John Harbour, for eighteen days' work with a single dredge, Mr. G. S. Mayes received the sum of $29,515, being an average of $1,639 a

day. A reference has already been made to the amount paid to the Great Lakes Dredging Company in the last three years, viz., $1,908,704. The Dominion Dredge Company for the two years 1907-1909, for work in the Maritime Provinces and Quebec, received $708,580 for 1,164,209 cubic yards, being an average rate of 60·8 cents; while the Departmental dredges during the same period dredged 2,045,307 cubic yards at an average rate of 20·7 cents. The Canadian Dredge and Construction Company, organized in 1907 with a paid up capital of $22,500, received for two years' work the sum of $685,391. In the year 1910-11 the dredge *Cynthia*, belonging to the Maritime Dredging Company, received $276,585 for ten months' work, dredging 700,194 cubic yards at Beacon Bar, Harbour of St. John. This was an average of considerably over $1,000 a day for every working day. The rate paid for this work was $4.30 a cubic yard for boulders and 39½ cents for clay, but less than three cubic yards of boulders were met with during the season. The *W. S. Fielding* owned by the Government, was also working at St. John, in the Harbour Channel, at much more difficult work, and in a more difficult location, and dredged 460,970 cubic yards boulders, sand and clay at an average cost of 18·27 cents per cubic yard, or $386 a day. Had the Government done the work at Beacon Bar with their own plant, the work done by the *Cynthia* alone could have been accomplished for $127,925, or a saving of $148,363.

It has already been pointed out that interest on capital, and depreciation are not included in the cost of dredging by the Departmental plant. The figures given are compiled from the Annual Reports of the Department, and are inclusive of cost of operation, repairs, renewals, towage, etc. If interest on capital were added, it would not materially affect the result as the Government borrows at a very low rate. As to depreciation, the aim of the Department is to keep the dredges as good as new, the repairs being charged to the annual expenses of the dredge.

GENERAL CONCLUSIONS.

It would appear to the Commission that the comparisons which they have given would in themselves indicate the desirability for discontinuance of contract dredging and the execution of the whole work by means of plant owned by the Government.

Other considerations, however, point just as strongly in the same direction. In the first place it should be borne in mind that there is no special inducement to exaggerate the amount of material dredged by a Government dredge; while on the other hand, it is to a contractor's interest to get credit for as large an amount as possible. Until the present year contractors' accounts have been made up almost entirely by scow measurement, certified to by the Dredge Inspectors. These are a body of men who hold purely temporary positions, being employed only during the dredging season and not very well paid. They are practically the only check upon the contractors. Instances have been brought to light in which they have neglected their duty, leaving opportunities not only for overcharges in respect of the quantity, but also for overclassification, of the material dredged. To what extent they may have certified to larger amounts than contractors were entitled to, it is impossible to say, but there can be no doubt that it has been done. To a certain extent this difficulty could be overcome by the substitution of place measurement for scow measurement wherever possible, but there are many cases in which this cannot be done. Added to all this is the difficulty of getting real competition in tendering, owing to the conditions which have been already pointed out, and to the method of dealing with the tenders when received. This has led to wasteful expenditure in the past, and might do so again in the future.

There can be no question that the amount of dredging to be done in the years to come will be just as great or greater than in the past. The constantly increasing business of the Dominion will ensure this. It would appear to the Commission, there-

fore, that the proper way to provide for it is for the Government to extend the system of Departmental dredging which they are now operating with some success, and which there is good reason to hope may be improved in the future. The Government are in a position to do the work more cheaply than private individuals, owing to the large amount of capital expenditure involved. Contractors have to provide for this, and for a profit; and owing to the uncertainty of always being able to secure Government contracts, must make the profit as large as possible.

There have been complaints in the past that the patronage evil has prevented the best results being obtained from Government operation. The Department should be given an absolutely free hand to employ only the best men obtainable, and to insist upon discipline among their employees. This rule should prevail all through the Service from the highest to the lowest.

At present, two Departments of the Government are engaged in the Dredging business on a large scale, and a third Department to a lesser degree. The dredging of the St. Lawrence Ship Channel was under the Public Works Department previous to the year 1905, when it was transferred to the Marine and Fisheries Department. The Commission cannot see that any good purpose was served by this. It created two separate Dredging Services, each under its own administration and entirely independent of the other. They think that the time has arrived when both Services should again be placed under one Head, who should be adequately paid for his services, and provided with the best expert assistance procurable, as the business is of a technical character.

It has already been mentioned that dredging on a smaller scale is now being carried on by another Department, that of Railways and Canals. It is of a somewhat different character and carried on under different conditions, and is moreover confined to canals and waterways, for the good condition and proper administration of which that Department is solely responsible. For these reasons, the Commission are of opinion that the control should remain where it is, but that Department should keep in touch with the Dredging Branch, and avail itself of the advice of the technical experts employed there.

While the earliest possible action should be taken looking to the gradual acquirement of sufficient plant to enable the Government for the future to discontinue contract dredging altogether, and to carry out this service entirely with its own employees, the Commission would again urge that in regard to existing contracts which have some years to run, all payments should, so far as the circumstances may render it possible, be made on the basis of place measurement rather than by the scow load.

All of which is respectfully submitted.

G. N. DUCHARME,

R. S. LAKE,

Commissioners.

Ottawa, November 9, 1912.

PUBLIC SERVICE COMMISSION

1912

SPECIAL REPORT

ON

DISMISSAL OF R. E. COOK

Department of Public Printing and Stationery

To His Royal Highness the Governor General in Council.

May it Please Your Royal Highness:—

Soon after being appointed, the Public Service Commission was very urgently requested by Mr. R. E. Cook, of Ottawa, to make inquiry into his conduct as an official of the Department of Public Printing and Stationery, and the circumstances surrounding his dismissal in 1910. In the belief that such an inquiry was not merely a matter of justice to Mr. Cook personally, but that it might incidentally afford valuable information regarding the Printing Bureau, so-called, the Commission commenced the desired inquiry in January last, and now have the honour to present their report, and the evidence taken before the Commission on oath.

Mr. Cook entered the Public Service in 1887, as a compositor; was promoted several times; in 1897 was entrusted with the supervision of the work to be done outside for the Bureau by private persons and companies (particularly lithographing), and attained Sub-division 'A' of the Second Division in the Civil Service, with a salary of $1,800 per year, and the rights and privileges conferred by the Civil Service Act.

He was dismissed from the Public Service in 1910, in the manner and under the circumstances hereinafter referred to:

An inquiry into the affairs of the Department of Public Printing and Stationery was made by the Honourable Mr. Murphy, then Secretary of State, during 1910. A report of the result was made to the Governor General in Council, dated November 8th, 1910, with certain evidence and sub-reports, and this material was placed before Parliament in a printed form during the Session of 1910-11. In the Commons, on January 30th, 1911, the Honourable Mr. Murphy said:—

> 'The blue book contains all the evidence of which any written record was made. In addition to the witnesses examined at the Printing Bureau, many other persons were interrogated at different times and places, but no record was made of their statements . . . . . No person was examined under oath, as the investigation was a departmental inquiry, and it was not deemed necessary to issue a Commission authorizing the taking of evidence under oath.'

In the course of the inquiry, Mr. Cook himself was examined by the Minister, and the evidence of various other persons was taken in relation to matters in which his conduct seemed to be called in question. But no charges against Mr. Cook were definitely made at any time, nor was any statement made to him as to the matters concerning which he was suspected to have been guilty of dereliction of duty. Mr. Cook was not permitted to ask questions of witnesses, nor even to be present at all times when they were being examined; he was not afforded any opportunity to call witnesses on his own behalf, and was not represented by counsel. The Minister himself examined the witnesses, all of whom were his subordinates or receiving patronage from his Department, and the printed report of the inquiry he held indicates very clearly that his questions were improperly leading in character and tinged by hostility to certain witnesses. It was improper for the Minister himself to be both prosecutor, judge and executioner, especially in view of the fact that the witnesses were all subject to his influence.

An examination of the evidence thus taken, reported and published; a consideration of the remarks in relation to the matter made in the Commons by the Honourable Mr. Murphy, on April 25th, 1911; and especially a comparison of what is

attributed in the blue book to certain witnesses with the evidence of the same witnesses given on oath before us, conclusively proves that the material so published as evidence, in the blue book, is incomplete and untrustworthy, and should not have been given circulation.

In the administration of a Department it may sometimes be necessary to obtain information relative to the conduct of affairs otherwise than by testimony on oath, taken in the presence of a person or persons to whose conduct it relates, but no man should be condemned and punished without fair trial; and, when, as in this case, the man is in reality the subject of suspicion, and his retention of office is in jeopardy, it is gross injustice to treat him as Mr. Cook was treated. Most certainly no man's reputation should be aspersed by the publication of evidence concerning him which has not been taken with all the safeguards which experience has proven to be essential to justice, even in public courts. No matter how cruelly unjust the matter published in a blue book may be, the victim cannot take any proceeding at law or any other action which will at all adequately vindicate his reputation, and therefore the publication, in an official form, of any matter concerning any person should not be resorted to or permitted without the greatest care. Mr. Cook has in this way been injured by the publication referred to.

In the Commons, on April 25th, 1911, the Honourable Mr. Murphy defended his action in the dismissal of Mr. Cook, making frequent reference to the blue book, and also made assertions and insinuations reflecting on Mr. Cook's conduct which even this evidence does not support, and in some cases contradicts. For instance, Mr. Murphy charged Mr. Cook with sending, "without the knowledge of the King's Printer," a letter which the Honourable Mr. Murphy denounced as improper. It was, in fact, the King's Printer himself who originated the idea of sending the letter in question; he had not denied it, and has before us adopted and justified it, as the result of a desire on his part to comply with what he understood to be the wish of the Honourable Mr. Murphy himself. For another instance, the Honourable Mr. Murphy represented that Mr. Cook made a contract for printing without his knowledge, and subsequently, to deceive him, obtained quotations for the work from several parties, which he presented to Mr. Murphy while the work was actually in progress. The real truth was: the Honourable Mr. Murphy being informed by Mr. Cook that he had arranged for the work, wrote to the persons who were doing it stating that no (official) order had been given for it; and directed Mr. Cook to procure quotations from other parties, which Mr. Cook did after he also had countermanded the order he had previously given for the work. Throughout the speech, there were many other misrepresentations or distortions of what Mr. Cook had done which would have been impossible, we think, if a full and fair inquiry had been made, and evidence on oath had been properly taken. Nothing that is said in the Commons can be the subject of an action at law, and, therefore, Mr. Cook has been forced to suffer without a remedy all the torments which must be experienced by any man with a keen sense of honour who has been unjustly assailed when and where he could offer no defence. Just because they cannot be called in question in the courts of justice, remarks ought not to be made in Parliament aspersing the character of any absent man, when not unavoidable, and they ought not to be permitted in any case when they obviously are not based on evidence given on oath in the presence of the accused, at a fair hearing, with full liberty to that accused to examine, cross-examine, tender evidence and otherwise justify himself. The case of Mr. Cook is an instance in point. His conduct was assailed in Parliament when he could make no defence, when only distorted evidence had been made public, and when the effect even of that distorted evidence had not been studied by any person except the Minister who took it. The speech was most unjust to Mr. Cook, necessarily inflicting great pain on him, and doing his reputation an injury from which, it may be, it can never completely recover.

If for any reason, information concerning the conduct of an official be received in any manner less formal than we have described, and if in the absence of such formality the dismissal or other punishment of the official take place, it seems to us that the information obtained should not be made public, but that the punishment imposed, if called in question publicly, should be defended on the sole ground that it was so imposed in the discretion of the Minister, or by the Governor in Council, as the case may be. In no case should evidence be published which has not been taken as described, and assertions derogatory to any man's character should not be made in Parliament on any basis less substantial.

A very striking instance of the worse than worthlessness of the evidence taken in the inquiry by the Honourable Mr. Murphy, is afforded by the circumstances surrounding a letter published in the blue book referred to, at page 297. This letter was referred to in the Commons on April 25th, 1911, by Mr. Northrup, M.P., who denounced it as shameful, but it was defended and explained by the Honourable Mr. Murphy, in the speech above referred to. He did not, however, explain the circumstances under which that extraordinary and reprehensible document had been procured and placed in evidence. Those facts are, briefly, as follows:—In April, 1910, Mr. William Mortimer orally quoted to Mr. Cook the prices at which the Mortimer Company, Limited, would do certain lithograph work and supply certain paper, respectively. In June, 1910, Mr. William Mortimer was requested in writing, by letters ante-dated April 20th, to give quotations for the same things. It was explained to Mr. William Mortimer, in June, when these letters were given to him, that the reason for dating as of April the letters asking for quotations in writing which he had already given orally was this, that the official file in the Bureau might show in writing what had in reality taken place orally. The device was the King's Printer's, done with innocent intention, in fact, and without injury to anybody, but over this matter a great pother was made in the Commons by the Honourable Mr. Murphy. Testifying about this matter, months before, viz., on the 7th of July, 1910, to the Honourable Mr. Murphy himself, the King's Printer said: "It was my own view." Yet on April 25th, 1911, the Honourable Mr. Murphy represented this as an instance of deceitful conduct on the part of Mr. Cook.

On September 16, 1910, Mr. William Mortimer gave unsworn evidence to the Honourable Mr. Murphy. The blue book (page 297) reports as follows:—

> "Q. Do you remember having an interview in the Printing Bureau with Mr. Cook in April last regarding a work called 'Farm Grasses?'—A. Yes.
>
> "Q. The substance of that interview was committed to paper by you in August last in a letter addressed to me, and which I will now read to you?—A. Yes."

The assertion, implied in the last quoted question by the Honourable Mr. Murphy, that the letter referred to was written by Mr. William Mortimer, was untrue. It was, in fact, written on the direction of the Honourable Mr. Murphy himself, by his stenographer, in Mr. Murphy's office, after discussion with the brother of Mr. William Mortimer, a Mr. A. E. Mortimer, who knew nothing personally about the matter. Mr. A. E. Mortimer very reluctantly gave evidence on oath before us relative to this letter. His evidence in full appears in the appendix hereto, but the following extracts accurately comprehend what he said on the question of authorship:—

> "I first saw the letter in Mr. Murphy's office. I was sent for (to go there). The letter was already written, and was read over to me. The letter was discussed for only a few minutes. Then I signed it. I said if I were writing it, I would express it somewhat differently, it is somewhat bald or raw. It is all hear-

say so far as I am concerned. The language of the letter is not my choice. If I had known it was to go out in public I would never have signed it. Mr. Murphy said he was not going to make any use of it."

Feeling that the Honourable Mr. Murphy ought to be afforded an opportunity to explain his connection with this letter, before the evidence of Mr. A. E. Mortimer concerning it was published, your Commissioners supplied the Honourable Mr. Murphy with a statement of the evidence on the question of authorship, and asked the Honourable Mr. Murphy if he desired to testify before them on oath. He did not accept the opportunity thus offered, but instead tendered a statement made by him, and verified by his affidavit. The Commission on the 28th February, 1912, caused the following reply to be made:—

"It is their practice to receive evidence in the ordinary manner, orally, under oath and by question and answer, and they see no reason for departing from this safe rule, by placing in the record of evidence the ex parte statement you now tender. On the contrary, the statement obviously contains matters that it would be unfair to both Mr. Cook and Mr. Mortimer to place on record, except after the most careful examination and cross-examination.

"If the inquiry now pending before the Commissioners directly placed your conduct in issue, a summons for you to give evidence would have been served on you in the regular way, but it has been incidentally only, and in relation to the Mortimer letter, that your personal action has been referred to: and in offering you an opportunity to testify, the Commission has acted upon a sense of courtesy and fair play, desiring that evidence referring to your conduct should not be published without giving you an opportunity to place your explanation on record at the same time. That explanation, I am directed to say, must be given with the same formality and under the same safeguards as all the other evidence. The Commission desire to report at an early date. The time has already been extended to accommodate you. It is now further extended to the end of this week. If you desire to deliver your evidence verbally, the Commission will be obliged if you will intimate your decision as speedily as possible."

The Honourable Mr. Murphy has not expressed any desire to avail himself of the privilege thus accorded.

The Mortimer letter, so-called, was as follows:—

"OTTAWA, August 16, 1910.

"DEAR SIR,—Referring to our letter of April 22 last, addressed to the King's Printer and containing prices for an edition of Farm Grasses, we beg to say that the circumstances under which Mr. R. E. Cook obtained the letter mentioned are as follows:—

"At an interview in the Printing Bureau in April last, Mr. Cook stated to our Mr. Wm. Mortimer that you had given a contract for the edition of Farm Grasses to the Toronto Lithographing Company, and that as the contract amounted to more than $5,000 you desired to have on file correspondence showing that you had invited tenders for the work, and that the Toronto Lithographing Company was the lowest tenderer. Mr. Cook added that this correspondence was required in case a question was asked about the matter. Mr. Cook asked Mr. Mortimer to put in a tender slightly higher than that of the Toronto Lithographing Company, and as the tender of the latter company had been placed on Mr. Cook's desk where Mr. Mortimer could see it, the latter copied the figures and returning to our office made up a tender as requested by Mr. Cook. We assumed that Mr. Cook's statements were correct and did not make any inquiry from you. We were, however, aware when we wrote the letter of April 22 that

the contract had previously been given to the Toronto Lithographing Company, and that our figures were not in the nature of a tender, but were to be used merely for the purpose of justifying the giving of the contract to the Toronto Lithographing Company as explained to our Mr. Wm. Mortimer by R. E. Cook.

"Yours truly,

"THE MORTIMER COMPANY, LIMITED.

"A. E. Mortimer."

Man. Dr.

It will be noticed that the letter refers to one interview only as taking place between Mr. William Mortimer and Mr. Cook, which it fixes as in April, 1910, and as resulting in an offer of prices by the Mortimer Company dated 22nd April, 1910. It says that Mr. Cook represented at that time that this offer was required for the purpose of "fixing" the official file of correspondence, and as justifying the previous giving of a contract to the Toronto Lithographing Company, and that the offer was not to be regarded as a bona fide one. It is also represented in the letter that to enable Mr. Wm. Mortimer to make this bogus offer efficient for its deceptive purposes, the offer of the Toronto Lithographing Company was left where the figures quoted could be seen by Mr. Mortimer.

Careful criticism of this letter, in the light of all the evidence given before the Honourable Mr. Murphy and, on oath, before us, proves that this letter was a very deliberate concoction for the express purpose of destroying Mr. Cook's reputation, and that it is as wholly false as it is obviously despicable. The fact is, the thought of making the official correspondence agree with what had occurred in April did not occur to anybody until June, and consequently the statement that Mr. Mortimer was told in April of this desire was not and could not be true. The offer was asked for in April because the Honourable Mr. Murphy had refused to permit the Toronto Lithographing Company to proceed with the work, and had insisted on prices being obtained from others, and, therefore, the story that the offer was asked for by Mr. Cook for the mere purpose of justifying the contract with the Toronto Lithographing Company is obviously false. Mr. A. E. Mortimer has sworn before us that Mr. William Mortimer did in April see on Mr. Cook's desk the offer made by the Toronto Lithographing Company, and did copy the figures therefrom to aid himself in making an offer for the Mortimer Company, but Mr. A. E. Mortimer declares that this was done by his brother surreptitiously, and that neither he nor his brother wished it to be implied that Mr. Cook had left the letter on his desk for the purpose of permitting Mr. William Mortimer to see it.

Mr. William Mortimer has been absent from Ottawa for a long time, and, therefore, his evidence was not taken by us, but there is no reason to believe that it would alter the present appearance of the situation.

In the Mortimer letter it is represented that the Mortimers entered into collusion with Mr. Cook, to falsify a public record, and to deceive those who might rely on it. Mr. A. E. Mortimer signed the letter, but on oath repudiates its authorship and denounces its contents. Mr. William Mortimer in an unsworn statement to the Honourable Mr. Murphy, in the course of an inquiry, assented to the letter as a true relation of facts, including, of course, its admission of intent to deceive, and assented also to Mr. Murphy's untrue assertion that Mr. William Mortimer had written this letter. In face of all this, it is perhaps unnecessary to add that in our opinion both Mr. William and Mr. A. E. Mortimer are unreliable witnesses.

That the Mortimer letter was dictated by the Honourable Mr. Murphy himself, to his own stenographer, in his own office, is now admitted by the Honourable Mr. Murphy in his statement verified by affidavit. He, however, claims that the dictation was based on the oral narrative of Mr. A. E. Mortimer to him.

The Mortimer Company, when the evidence was given to Mr. Murphy and the letter signed, was, and it continued to be, in the receipt of printing patronage, which the Honourable Mr. Murphy absolutely controlled.

It was asserted by the Minister, in the Commons, on 25th April, 1911, that Mr. Cook was dismissed for causes shown in the course of the inquiry referred to above. It is probable that there were mixed causes for the Minister's action, but it is quite certain that the immediate occasion for dismissal was not anything alluded to in the course of the inquiry, but a very different matter altogether. The Montreal *Herald,* in July, 1910, was doing certain printing for the Bureau. On the 9th day of July—a Saturday morning—the Minister directed Mr. Mulvey, Under Secretary of State, to procure to be made a remittance of $5,000 to the *Herald,* on account of work done. Mr. Mulvey personally visited the Bureau, between 11 a.m. and 12 a.m. on the same day, and ordered Mr. Cook to have the remittance made. Mr. Cook objected that the vouchers had not been received which the practice of the Bureau required should be in hand before a remittance was sent, and that this was more important than usual because $5,000 had already been irregularly paid to the *Herald* by the Interior Department on account of the same work. Mr. Cook stated, however, that he would immediately telegraph for the necessary documents, which he did. Mr. Mulvey became very angry, left the Bureau, proceeded to the office of the Secretary of State, and informed him of Mr. Cook's refusal, whereupon the Minister by telphone ordered the King's Printer to suspend Mr. Cook. Mr. Mulvey, testifying before us, was of opinion that on the occasion in question he spoke of the desired remittance to both the King's Printer and Mr. Cook, but they both distinctly deny this, and being pressed as to his recollection of the facts, Mr. Mulvey was not able to satisfy us that his memory was good on this point. The circumstances seem to confirm the evidence of the King's Printer and Mr. Cook, and we conclude, therefore, that Mr. Mulvey, without the sanction of the King's Printer, asked Mr. Cook to do a thing which would have been a violation of the sound practice of the Department. We find, therefore, that the immediate cause of Mr. Cook's dismissal was a refusal which Mr. Cook was wholly right in making, and that Mr. Cook's conduct and demeanour on the occasion were proper, and the Under Secretary's action irregular.

In the House of Commons, on January 30th, 1911, the Honourable Mr. Murphy said that the dismissal of Mr. Cook was due to facts elicited in the course of the investigation held by him, and was for:—

(*a*) Disobeying instructions.
(*b*) Wasting public moneys.
(*c*) Placing orders outside the Bureau without securing competitive prices, and for
(*d*) Untruthfulness and incompetence.

From a perusal of the speech delivered in the Commons on the 25th day of April, 1911, by the Honourable Mr. Murphy, and from a consideration of all the evidence published in the blue book and taken before them, the Commissioners conclude that the verdict thus formulated refers chiefly to the circumstances surrounding,—

(*a*) The conduct of Mr. Cook in reference to the proposed publication of a book known as "Farm Grasses," for the Department of Agriculture; and

(*b*) A payment to the Gananoque *Reporter* for printing an immigration pamphlet for the Department of the Interior.

The salient, material facts in relation to these two matters are as follows:—

(1) *"Farm Grasses."*

A large amount of very high class lithograph work and a special kind of paper were necessary to the production of "Farm Grasses." Similar lithograph work had been done in 1909 by the Toronto Lithographing Company in the printing of a book

called "Farm Weeds," and the workmanship was of very high quality indeed. In February, 1910, Mr. Cook, with the approval of the King's Printer, arranged with the same company for the lithographing of "Farm Grasses," and also for the importation for the Bureau of the paper required for the work. It is admitted by the King's Printer that he directed Mr. Cook to ascertain what arrangement could be made with the Toronto Company, and while the King's Printer is not quite clear that Mr. Cook reported that an agreement had been made, and the work commenced, we see no reason to doubt that Mr. Cook reported in due course, for the King's Printer was so much in the habit of relying on what Mr. Cook did that the fact of a report or no report would probably not impress itself upon his mind.

In March, after several unavailing attempts, the King's Printer and Mr. Cook obtained an audience with the Honourable Mr. Murphy, and Mr. Cook informed him that an arrangement had been made with the Toronto Company to do the lithographing and import the paper. Mr. Murphy was very angry, for he had previously instructed the King's Printer to obtain competitive tenders for doing the lithographing of this very work, which instructions, however, the King's Printer had omitted to mention to Mr. Cook. In his speech in the Commons, the Honourable Mr. Murphy sought to make it appear that on this occasion he was not told about the work having been given to the Toronto Lithographing Company, but only that the paper had been ordered through that company; and he says that he wrote to the company regarding the "paper," saying that he would not recognize the transaction. But the letter he did write to the Toronto company said, "You have been interviewed * * * * regarding the publication of a book * * * *. No order has been given (by himself) for any part of the publication mentioned.' This is not language which one would use regarding a purchase of paper; it does apply to the production of a book. It is admitted by all that Mr. Cook informed the Honourable Mr. Murphy on this occasion that he had obtained prices for lithographing from the Toronto company, and had arranged for a purchase of paper, and it is said by all the parties that the Honourable Mr. Murphy was very angry that competitive prices for the lithographing had not been obtained. But why should paper be ordered if no arrangements had been made for the printing, and why should the Honourable Mr. Murphy be angry over the absence of competitive prices for printing if no price had been accepted? We find that Mr. Cook's account of what took place at this interview is the correct one.

The interview was abruptly closed by the Honourable Mr. Murphy, who refused to approve of what had been done, and who ordered that competitive prices should be procured as speedily as possible. With the approval of the King's Printer, Mr. Cook, in April, proceeded to Toronto, Buffalo and New York, and obtained oral offers for the lithographing from various firms. Mr. Cook on this occasion informed the Toronto Company of the Minister's refusal to confirm what he had previously done. On his return, Mr. Cook prepared a tabulated statement of all the offers received, which statement the King's Printer conveyed to the Honourable Mr. Murphy, but the latter asked to see the offers, and on being told they were verbal, refused to approve action on them at that time.

On the 19th of June, 1910, the Honourable Mr. Murphy wrote to the King's Printer, and sent the letter by a clerk employed in his office. It is said by Mr. Murphy that this communication was intended to direct that a letter should be placed on the correspondence file "to show exactly what Mr. Cook had asked each tenderer for from whom he had asked prices." The King's Printer, aided by Mr. Murphy's clerk, construed this to mean that the minister wished that offers in writing, in the terms of the oral offers, should be obtained. Letters dated April 20, 1910, were sent out in June, 1910, to the firms who had in April made verbal offers, asking formally for offers, and covering letters explained that this course was followed in order that the official file might be in accordance with the facts. The fact that letters

dated in April were sent out in June opened the door for an assumption of much mystery about the matter by the Honourable Mr. Murphy in the Commons, who spoke of it as "a solemn farce," and said that the covering letters were sent "without the knowledge of the King's Printer." In the inquiry held by himself, the Honourable Mr. Murphy had been told by the King's Printer the reasons for this proceeding, and the King's Printer said "it was my own view," so that there is no excuse for blaming this on Mr. Cook. The expedient adopted was clumsy, but its author was quite innocent of any motive other than a desire to carry out the directions of the Honourable Mr. Murphy himself.

In perusing the evidence given before the Honourable Mr. Murphy, it is necessary to a right understanding thereof, to bear in mind that the words "contract" and "tender" were understood by the witnesses, Cook and Parmelee, to refer to written documents, and not to include oral agreements or offers. For instance, Mr. Cook says, "there was no contract with the Toronto Company," he means no written contract, and Mr. Parmelee places the same meaning on "contract." When they say "tender," they mean written tender, and do not include oral offers. The Honourable Mr. Murphy should have noticed this confusion in the minds of his witnesses, but it must have escaped his observation, for his comments in the Commons upon much of the evidence would have had no point in them if this distinction had been borne in mind.

None of the offers obtained in April by Mr. Cook were as good as the offer by the Toronto Company, but during the inquiry held by the Honourable Mr. Murphy one of his experts obtained a lower offer from a Montreal Company, which has only recently completed the lithographing. The lower price was largely consequent upon printing sixteen plates at one impression, whereas the Toronto and other Companies were of opinion that good work could not be done if more than eight plates were printed on one sheet. But the work has been well done, and the Montreal Company receives a lower price than the Toronto Company asked. Nevertheless, the Toronto Company is claiming damages, and a book which should have been published in 1910, has only now been produced, so that the delay must be set off against the lower price received by one company as compared with that asked by the other. The question of time was a factor in the original offer, for speed was desired by the Department of Agriculture, and lower prices might have been quoted by the Toronto Company and others if it had not been represented that early publication was necessary.

(2) "*Gananoque Reporter*".

The Interior Department requisitioned the Bureau for the printing of 100,000 copies of a pamphlet. It was decided to have the work done outside the Bureau. Mr. Cook suggested to the King's Printer that the printing should be given to the Gananoque *Reporter* in the office of which newspaper Mr. Cook had learned his trade as a compositor. The King's Printer assented, and Mr. Cook visited Gananoque to ascertain if the *Reporter* office was fitted out to do the work, and, if so, to arrange for it. The proprietor, Mr. Britton, thought $2,000 about the price he should have, but dropped to $1,600. Mr. Cook proposed $1,160, and Mr. Britton intimated that he would rely on Mr. Cook's judgment. The King's Printer, after consultation with Mr. Cook, agreed to give $1,160, which amount was arrived at by comparison with prices which had been paid other offices for similar work. Before the *Reporter* had actually been notified of the King's Printer's decision, but after that decision had been made, a Mr. A. H. Barker, Manager of the Ottawa *Free Press*, called at the Bureau, looking for printing work to do in the office of the *Free Press*. He was told by Mr. Cook that there was none to be given out at the time, but that an order had been placed with the *Reporter* for 100,000 pamphlets, which otherwise the *Free Press* might have got, and that the *Free Press* might get the work to do from the *Reporter*

if the price it would take were low enough. Later on that day Mr. Barker named $950 as the price he would take from the *Reporter*, saying that the *Free Press* job staff were idle at the moment, and this job would do as a "filler". On the same day, the *Reporter* was informed that the work had been awarded to it for $1,160, and that it must be completed within one month. It had been the intention of the *Reporter*, up to this time, to do the work in its own office, which had a sufficient supply of plant to do the job in an ordinary way, but when the *Reporter* was informed that only a month would be allowed for the printing, the *Reporter* doubted its ability to do the work in so short a time, whereupon Mr. Cook informed the proprietor of the offer made by the *Free Press*, and the *Reporter* decided to accept the order for $1,160, intending to sub-let the work to the *Free Press* or some other office. The *Reporter* was paid $1,160 on the completion of the work; the *Free Press* received $950 from the *Reporter*; and the latter, therefore, obtained a profit of $210.

It appears that the price paid by the Bureau to the *Reporter* was fair and reasonable; and that the price paid the *Free Press* by the *Reporter* was unusually low; lower, probably, than the *Free Press* would have asked the Bureau for the same work if the order had been given directly. The only statement by Mr. A. H. Barker relative to the matter is in the form of a letter read by the Honourable Mr. Murphy, in the Commons, and as Mr. Barker now lives in the Northwest, we could not examine him on oath without more expense than seemed warranted. Remembering the manner in which the Mortimer letter was procured, we have not felt compelled to lay much stress on the exact form of the Barker letter, but it does not in any material matter differ from the above account of what occurred between Mr. Barker and Mr. Cook.

Undoubtedly, before he had actually completed the agreement with the *Reporter*, Mr. Cook was aware that the *Free Press* would do the work for the *Reporter* for $210 less than the amount it had been decided to give the *Reporter*. It cannot be questioned that the Bureau was at that moment legally in a position to withhold the order from the *Reporter*. But can it be said that Mr. Cook was morally bound to withhold the order in view of all the circumstances, or that he did any moral wrong in not withholding it? He and the proprietor of the *Reporter* had agreed that the *Reporter* should have the work to do for $1,160, if the King's Printer approved of that price, and the King's Printer had given his approval before Mr. Cook knew that the *Free Press* would do the work for the *Reporter* for a smaller amount. The approval of the King's Printer having been given, might it not have been a breach of faith to withhold the order from the *Reporter*, because of subsequent information that the price would allow the *Reporter* to make a profit by sub-letting the work?

It was the uniform practice of the Bureau to give out work without prior agreement as to price, and to pay for it at rates which had been revised and approved by the Honourable Mr. Murphy himself. Minister and King's Printer alike have known that in many cases, perhaps in a majority, competition by tender would result in lower prices. It has been the practice to keep at the Bureau a list of persons or companies to whom alone work was to be given, a proceeding which deliberately shut out competition by all those who were not on the list, and by shutting out such competition must have had the effect of compelling the Bureau in many cases to pay higher prices for printing than would otherwise have been necessary. By debarring opponents from any share in public printing, and confining that printing to those persons who are recognized to be supporters of the Government, and by paying those supporters upon an established scale, without asking them to tender or to name special prices, succeeding Governments have established the custom that printing work is not necessarily to be done at the lowest possible price, but is to be treated to a considerable extent as patronage, to be divided amongst friends and supporters of the Government, and not necessarily to be given at the lowest prices which could be obtained even from amongst these, by competition.

It is clear that Mr. Cook did not have any personal interest in the matter, except a friendly feeling towards an office in which he had been trained as a compositor; that he did not profit in any way by what was done, and that no thought of personal profit had anything whatever to do with his decision. The *Reporter* was a supporter of the Liberal Government of the day, and Mr. Cook's sentiments were Liberal-Conservative, so that he did not have even a partisan motive for patronizing the *Reporter*.

It was an error of judgment on his part not to withhold the order to the *Reporter* until he had informed the King's Printer, but it certainly was not anything more, and if on becoming aware of what had been done, the Minister felt that a different course should be pursued thereafter, a direction to that effect would have been quite sufficient, and would doubtless have been obeyed by Mr. Cook.

In the Commons, the Honourable Mr. Murphy complained that Mr. Cook had not been frank to him in reference to the time at which he knew that the *Free Press* would do the work for a lower price than the *Reporter* was to be paid, and in proof of this charge, he produced the letter signed by Mr. A. H. Barker to which reference has been made herein, stating the time when Mr. Cook really did know about the lower price. We are of opinion that Mr. Cook was not frank to the Honourable Mr. Murphy on this point; he told no untruth, but he did not tell all the truth. It is not remarkable, however, that he told as little as he could at the inquiry by the Honourable Mr. Murphy, for he was asked certain leading questions, and not generally to tell what he knew, and he was obviously made to feel that he was in the grasp of an enemy.

In any case, lack of frankness on this occasion had nothing to do with Mr. Cook's dismissal, for that had taken place before the Honourable Mr. Murphy obtained the evidence in Mr. Barker's letter.

Mr. Cook was twenty-three years in the Public Service, during which time he was known as a more than ordinarily active official, and it is noteworthy that though he occupied a position which gave him virtual control of considerable patronage, at a period when affairs in the Bureau were loosely managed, not a single charge of dishonesty was ever made against Mr. Cook. It was said by experts who examined the Bureau affairs in 1910, for the Honourable Mr. Murphy, that Mr. Cook had not a thorough knowledge of lithographing work, which he supervised for the Bureau. This was unfortunately true; it was Mr. Cook's misfortune, not his fault, that he had been placed by Dr. Dawson in charge of work of a technical character in which he had no training. Yet it appears that he did his work at all times to the best of his ability, and that he possessed the respect and confidence of Dr. Dawson and Mr. Parmelee, King's Printers at different times, and not of these alone, but also of those outside with whom he came in contact in a business way. Mr. A. E. Mortimer says of Mr. Cook, "I thought he was too strict, as I told the Minister (Honourable Mr. Murphy), and straight-laced." The managing director of the Montreal *Herald*, Mr. J. S. Brierly, wrote to the Honourable Mr. Murphy a letter in which the following appears:—"I have uniformly found Cook not merely courteous, attentive and industrious, but apparently one of the few men who was devoted to his work, who took an interest in it, who appeared thoroughly competent, and who deplored the lax conditions which prevented the best results from being secured." The Reverend Wm. Briggs, of the Methodist Book Room, Toronto, wrote as follows to the Honourable Mr. Murphy:—"We always found Mr. Cook to be the soul of honour in all business transactions, ever watchful of the interests of the Government he represented, and never by word or suggestion did we see anything improper in him; in fact, we had learned in the progress of the years to hold him in very great respect."

The examination of Mr. Cook himself, at the inquiry referred to, took place on the 7th day of July, 1910; two days later, the *Herald* incident having occurred in the meantime, Mr. Cook was suspended for three months, and at the expiration of

that period he was dismissed. The suspension was by order of the Minister, the dismissal by Order-in-Council, on the Minister's recommendation, but the sentences of suspension and dismissal were conveyed to Mr. Cook by the King's Printer, who says that he did not recommend either, and was not accorded any reason for either. The sole responsibility, therefore, rests in fact on the Minister himself.

In conclusion, the Commissioners find that Mr. Cook was harshly treated, unfairly dismissed, and publicly misrepresented; that he had been, and is now capable of being, a valuable public servant, and that no sufficient evidence was adduced or cause shown to justify the treatment accorded him. We find that he should if possible be reinstated in the Civil Service in the status and with all the rights which he would now have if he had not been dismissed.

All of which is respectfully submitted.

ALFRED B. MORINE,
Chairman.

G. N. DUCHARME,
R. S. LAKE,
Commissioners.

OTTAWA, May 31st, 1912.

PUBLIC SERVICE COMMISSION

1912

SPECIAL REPORT

ON

Department of Public Printing and Stationery

To His Royal Highness the Governor General in Council.

MAY IT PLEASE YOUR ROYAL HIGHNESS:—

The Public Service Commission have the honour to present the following Report concerning the Department of Public Printing and Stationery:—

The Department of Public Printing and Stationery was organized by Act of Parliament in the year 1886, prior to which time all the printing for the Public Service had been done by contract. It did not, however, enter upon the actual business of printing until 1st July, 1888, when it took over the establishment of Messrs. McLean & Roger, the then contractors, leasing their premises and plant for one year, and transferring the working staff as it existed. The construction of the Printing Bureau was begun in the latter part of 1886, and progressed so that at intervals during the year 1889 the employees were moved into the new building, and the leased premises finally vacated on the 15th October of that year.

The new building was designed to accommodate the business of the Government as it existed at the time of the passing of the Act, without making provision for further increase. The consequence was that within three months of occupying it, the then Queen's Printer reported that every part of the building was occupied, and that in order to provide for the requirements of the law it should be enlarged.

Two years later Dr. Dawson, who had recently been appointed Queen's Printer, described the Bureau as occupied from attic to cellar and the work overflowing the limits of the building. Year after year he urged the necessity for additional accommodation; but it was not till 1904, and again in 1905-6, that the building was enlarged. Even then the increased accommodation was not sufficient to provide for all the services required by the Act.

These requirements are set forth in Sec. 5, Chap. 80, R.S.C., as follows:—

"The Department shall be charged exclusively with the following duties in relation to services required for the Senate and House of Commons and the several Departments of the Government, namely:—

"(*a*) The execution and audit of all printing, stereotyping, electrotyping, lithography, binding work, or work of the like nature, and the procuring of the material therefor;

"(*b*) The purchase and distribution of all paper, books and other articles of stationery of whatsoever kind, except books which are required for the use of the chaplains, libraries or schools in the penitentiaries which may be procured as heretofore;

"(*c*) The sale of all books or publications issued by order of either or both Houses of Parliament or by any Department of the Government;

"(*d*) The audit of all accounts for advertising.

"2. The aforesaid services shall be executed by or under the superintendence of the proper officers respectively of the Department."

While Section 16 of the same Act provides as follows:—

"A Government establishment shall be organized at Ottawa, and shall be under the management of the Superintendent of Printing, in which establishment all printing, electrotyping, stereotyping, lithographing and binding and other work of like nature required for the service of the Parliament and the several departments of the Government shall be executed."

On the 20th March, 1902, the Auditor General called the attention of the King's Printer to the provisions of Sections 5 and 16 quoted above, in view of the fact that for the six months ending the 31st December preceding, printing, lithographing, binding, etc., had been executed for the several Departments in outside offices, and payments had been made therefor amounting to $20,728.32. In his reply Dr. Dawson pointed out that in regard to lithographing, no lithographic establishment had ever been supplied by Parliament to do the work; and that for many years he had called attention to the inadequacy of the facilities for the work committed to the Printing Bureau.

Up to the present day, no steps have been taken to remedy these conditions; and the payments by the King's Printer for lithographing, printing, etc., done outside of the Bureau amounted for the fiscal year ending 31st March, 1912, to $292,219.11. This is equal to about thirty-three per cent of the value of the work done in the Bureau. There is nothing to show what proportion of this was for printing and what for lithographing, but an estimate places it at the ratio of ten for the former to twenty-three for the latter. The foregoing figures do not include the printing done for the Intercolonial and Prince Edward Island Railway, which amounts to about $100,000 annually. This work should be done by the Bureau itself when there is sufficient accommodation. In addition to this, the Immigration Branch of the Department of the Interior, contracts for a large portion of its own work without reference to the King's Printer at all. During the year ended 31st March, 1911, nearly $74,000 was paid by this Branch to one firm in the United States for work ordered from them without competition.

LACK OF SPACE IN PRESENT BUILDING.

Owing to the enormous increase in the demands of the Public Service during recent years, the present building has become utterly inadequate for the business required of it. There is insufficient accommodation for either the plant or the employees. The storage capacity is inadequate and the corridors are piled up with stores of all kinds. Not only does this add to the risk of fire, but should a fire occur during working hours it would be a serious obstacle in the way of getting the employees, male and female, safely out of the building.

The internal arrangements for supervision, and for facilitating co-operation and communication between the various Branches, and for economy in the cost of handling, are all defective from the lack of space.

In 1889 the number of hands employed was two hundred and eighty-seven, with forty additional men during the session. This year they number about eight hundred and seventy-five.

To provide adequate space for the business now carried on in the Bureau itself, there should be fifty per cent more floor room; and to this should be added the space which would be required for the printing which the officials of the Bureau now find themselves compelled to give to outside firms. Added to this also should be the additional accommodation required for a lithographing establishment as well as provision for electrotyping and other processes, which, in the opinion of the Commission, should be included in order to comply with the requirements of Parliament as embodied in the Act. It will thus be seen that in order to carry out conveniently all the printing and lithographing work of the present day, the floor space of the present building should be nearly doubled. This increase, however, will only provide for present day requirements. The business transacted in the Department has grown enormously since the Bureau was built; and the King's Printer in his last annual report quotes figures to show that it practically doubles itself every ten years. By the time any possible extensions to the present building could be completed, there would again be

the necessity for further space. The mistake made in 1886 of providing only for the business as it existed at the moment should not be repeated.

It should be pointed out, too, that the present overcrowded and inconvenient conditions at the Bureau form a serious obstacle to efficient and economical production. If space permitted of a more convenient arrangement of the different branches in their relation to each other, there would not only be a saving in cost, but the work could be turned out more expeditiously. While defective organization has in the past been probably mainly responsible for the criticisms levelled at the Department, the difficult conditions from lack of space and modern conveniences are also contributing factors.

NEW BUREAU SHOULD BE BUILT.

The Commissioners have considered the question of enlarging the present building and have come to the conclusion that such a course would not meet the situation. At present the whole arrangement of the building is so inconvenient that in order to fit it with modern conveniences an immense sum would have to be spent on reconstruction. In addition to this no possible extensions would be adequate to meet the requirements of even five years hence and give an efficient and economical service.

It was the intention of Parliament that all lithographing and other work of like nature required for the Government should be executed at the Bureau. This has never been carried out because no plant was provided for the purpose.

Moreover, in addition to the ordinary work of this nature, which has up to the present been executed for the Bureau by commercial establishments, we are of the opinion that the time has now come when all Dominion bank notes, postage and inland revenue stamps, postal notes, etc., should be printed in a Government establishment, as they are in the United States and other countries. At present this work is done under contract by the American Bank Note Company, who for the year ending 31st March, 1911, were paid a sum of $343,779.40 for this service. A building to accommodate the necessary establishment for such a purpose in the future would have to be capable of far greater expansion than the present Bureau. The Commissioners, therefore, recommend that, in view of the recent and prospective development of the business of the country, in order to carry out the provisions of the Act respecting Public Printing, a new building should be provided at the earliest possible date. It should have three times the floor space of the present one, and careful consideration should be given to the question of sanitation, light, ventilation and the comfort and convenience of the employees, which are notably deficient in the present edifice.

Two leading officials of the Bureau have been good enough to submit to the Commissioners plans for a new Printing Bureau which appear to have been carefully thought out with a view to convenience and economy of administration; but the Commission are of opinion that the services of experts familiar with the largest printing establishments in Canada, England and the United States, should be obtained to advise in such a matter, and their views taken into consideration in conjunction with those of the officials above mentioned who have the practical experience of conditions as they exist at Ottawa. The Commission did not, however, think that they would be warranted in going to the expense of obtaining such expert opinion until the Government had decided on their policy in regard to the whole question.

We would point out, however, that there is urgency for an early decision in regard to this matter. At the present time, the Act is being disregarded in what must be accepted as its most important feature, viz.:—that all printing lithographing, electrotyping, stereotyping and binding and other work of like nature should be executed in a Government establishment.

It is of course open to Parliament to change the present Act and to carry on the existing practice under which part of the work is done in the Bureau and part by private establishments. The Commissioners would not, however, favour such a

policy. The difficulties and troubles which existed under the system prevailing before the establishment of the Bureau would probably reappear. Besides which the giving out of printing and lithographing work to private firms from its very nature is and must be open to abuse. The methods of doing this in the past have been open to serious criticism; and it seems impossible to devise others that will not allow some loopholes.

The present establishment performs valuable services which could not be done by private offices as efficiently or conveniently as the Bureau should be able to perform them under proper conditions. It must always be borne in mind that Government establishments, being regulated by specific Acts of Parliament and subject to the more rigorous and complex system of accounting and checking which is demanded in the safe-guarding of public money, is at a great disadvantage as compared with an ordinary commercial undertaking, in the production of financial profits. The hands of the Departmental Head are tied. He cannot introduce improvements or effect economies like the manager of a commercial institution. In addition to this, he is liable at any time to be called upon for a variety of returns and information which would never be asked for in a private establishment.

It may not be out of place here to recall the fact that under the old contract system the printing for the Government was most unsatisfactory, both as regards quality and price. Mr. J. Blackburn, of London, Ontario, employed as an expert to look into the question in 1885, reported that it was notorious that the Parliamentary and Departmental printing of Canada was of a very inferior kind; and Mr. Chamberlin, the King's Printer, stated that it had never been first class since before Confederation. During their inquiry the Commission have had no complaints regarding the quality of the work turned out by the Bureau. It appears to be generally conceded that it is first class; and in this respect at least, the present system must be regarded as a great improvement upon the old.

CONSTITUTION AND MANAGEMENT.

It has already been pointed out that the provisions of the Public Printing and Stationery Act are not being complied with in so far as having all printing, lithographing, etc., for the Government performed in the Printing Bureau. The same statement can be made in regard to the provisions for constitution and management, and especially in connection with the status and duties of several of the leading officials.

During the year 1910 an investigation into the affairs of the Department of Public Printing and Stationery was carried out; and during its course two experts, Messrs. John Hyde and E. G. O'Connor, were employed. Their report was a valuable one and a number of their recommendations have been carried into effect. In his report to Council, dated the 8th November, 1910, the then Secretary of State announced his intention to introduce a Bill to amend the present Act. This was necessary if some of the changes in management which he made were to have the authority of the law behind them. Mr. Murphy's intention, however, was never carried out, and in consequence more than one of the present leading officials are holding offices and performing functions not contemplated by Parliament. While Messrs. Hyde and O'Connor's report, as has been said already, was a valuable one, it did not in the opinion of the Commission go deeply enough into questions of internal check and accounting; nor did it offer a sufficiently comprehensive plan for efficient administration and strict control of expenditures. The Commission, therefore, decided to request Messrs. Price, Waterhouse & Company to make an inquiry into the Bureau and report to them, with especial attention to the question of management and accounting. We append their very complete and valuable report, and concur gener-

ally in their findings and recommendations. An earnest effort should be made to have their proposals carried out, especially in regard to accounting and auditing, and the checking of goods received and issued by the Stationery Branch.

MANAGEMENT.

From the first there appear to have been difficulties and friction in the Bureau owing to indefiniteness in the Act as to the relative status and duties of the Superintendent of Printing and the Superintendent of Stationery in their relationship to the King's Printer. The Act should be amended so as to provide:—

(*a*) That the King's Printer, as Deputy Head of the Department, should be responsible for its proper administration to the Secretary of State; that all the officials of the Department should be subordinate to him; that all official correspondence should be carried on through his office; and

(*b*) That the duties of the Heads of the Branches under him should be clearly set forth.

It may be pointed out, that while the Minister has and must always have absolute authority over the Bureau, that authority should always be exercised through the King's Printer. Departure from this principle has been most detrimental to the discipline of the Service. The King's Printer should be freed from all routine work and minor and unimportant details. As head of a great establishment he should be able to devote his whole time to the larger questions of policy and general supervision.

ADMINISTRATION.

For administrative purposes, the Bureau should be divided into five branches, each of which should be under a head official directly responsible to the King's Printer. These branches and their official heads should be as follows:—

Accountants' Branch—Chief Accountant.
Printing Branch—Superintendent of Printing.
Stores Branch—Superintendent of Stores and Distribution.
Secretary's Branch—Secretary of the Department.
Purchasing Branch—Purchasing Agent.

The duties to be assigned to each Branch are briefly as follows:—

ACCOUNTANTS' BRANCH.

The Chief Accountant should have complete control of all the accounting, stock and cost records of the Bureau. The audit of the printing for the Intercolonial and Prince Edward Island Railways should come under his jurisdiction; and he should keep all records in connection with time-keeping and the preparation of the pay-roll. He should also be in charge of the preparation of statistics; which should be kept constantly up to date and be of such a complete nature that he can at all times keep the Advisory Board—which it is hereinafter proposed to create—informed as to the condition of business at the Bureau. He should be freed from all detail work and thus enabled to devote the whole of his time to supervision.

A Cashier should be appointed in this Branch who would relieve the Accountant of all duties connected with the receipt and disbursement of cash.

PRINTING BRANCH.

The Superintendent of Printing should be in charge of all printing, stereotyping, electrotyping, lithographing, engraving, binding and all the processes necessary for

the production of the completed work in the Department. He should also be in charge of the mechanical staff.

He should, however, be relieved of the supervision of the cost accounting system though he should furnish the necessary data, and be constantly in touch with it, and be regularly informed as to its results. He should have nothing to do with contracting for work to be done outside of the Bureau, the arrangements for which, when approved by the King's Printer, should come within the duties of the Purchasing Agent. He should have another Assistant, in addition to the Controller of Composition, who would relieve him of ordinary routine work and enable him to exercise a more direct personal supervision over the Composition, Press, Bindery and other Branches of his Department. It is essential that one of his Assistants at least should be thoroughly proficient in both the English and French language.

STORES BRANCH.

The Superintendent of Stores and Distribution should be in charge of the receipt, care and distribution of all printing stores, stationery, and office supplies required either for the Printing Bureau itself, or for the other Departments of the Government. He should be relieved by the Purchasing Agent of all work in connection with the actual ordering or purchasing of the same. He should, however, be responsible for the proper specification of all supplies required, and for ensuring that the goods received from the contractors are up to the specifications, both as regards quality and quantity. He should also have charge of the distribution of printed documents.

SECRETARY'S BRANCH.

The Secretary should have general charge of the correspondence of the Bureau and act as Secretary to the Board. The preparation of the *Canada Gazette* and the office for the revision of the voters' lists should also come under his control. The official in charge of this latter office informs us that except at election times, his work is not sufficient to occupy his whole time. The duties of the office are, however, of a very responsible nature and should continue to receive the direct supervision of a senior official. The gentleman at present in charge might be able to take over the duties of Secretary and at the same time continue his personal oversight of the Franchise Room.

PURCHASING AGENT.

The Purchasing Agent was appointed to his position without any instructions being issued as to what his duties were to be. These should be clearly defined. He should have charge of the entire purchasing of all goods required by the Department of Public Printing and Stationery in the execution of its duties. This should be understood to include also miscellaneous supplies, and the contracting for outside printing and lithographing work. The latter should include work of this character now done in the United States for the Immigration Branch of the Department of the Interior which appears to have been given without competition to a single firm in Chicago for many years past. His purchases should, except in the case of trivial amounts, be by contract after public competition. Tenders for Stationery Stores or for Printing should be opened in the presence of the Superintendent of Stationery or the Superintendent of Printing, as the case may be, as well as of the King's Printer. He should also contract for all the advertising for all the Departments, including that of the Immigration Branch, which last year expended about $150,000 through its own officials on this service.

ADVISORY BOARD.

With the object in view of encouraging the sense of unity and the necessity for combined action and co-operation for the successful carrying out of the work of the Bureau, the Commissioners recommend that a Board should be constituted under the Chairmanship of the King's Printer, which should meet at least once a week and whose minutes should be recorded.

This Board should consist as follows:—

The King's Printer, President.
Chief Accountant,
Superintendent of Printing,
Superintendent of Stores,
Secretary,
Purchasing Agent.

The Secretary should act as Secretary to the Board. Periodical statements regarding the state of business in each Branch, of accounts, and generally of such information as is required for the Annual Report to Parliament should be laid each week before the Board; and all questions of importance, having a bearing upon the policy of the Department as a whole, should be the subject of discussion. In addition, it should be the duty of every member to bring before the Board any question of importance respecting his own Branch. The decision of the King's Printer should be final on all questions, but any dissenting member should be entitled to have his opinion recorded in writing upon the minutes. A copy of the minutes should be forwarded each week to the Secretary of State.

In making the foregoing proposals for the distribution of work the Commission have had in mind the necessity which exists in all well regulated establishments for a complete internal check upon all transactions. Experience in the past has shown that the most trusted officials may be imperceptibly led, by the absence of such checks, first into irregularities, and later into actual frauds. It has been proposed that certain duties should be taken from the Superintendents of Printing and of Stationery, and assigned to the Purchasing Agent, solely on the principle that the person who in the first instance advises as to what work is to be given outside or what goods are to be purchased, and later has to certify that the order has been properly filled and the goods received, should not be the same person whose duty it is to decide to whom the work should be given and the price that is to be paid for it.

The heads of the different branches should, in our opinion, be given equal rank and as early as possible advanced to the same position as regards pay. They should each of them be held personally responsible for the efficiency of their various branches, and only hold their positions so long as their branches are producing results satisfactory to the Minister.

The Minister should specify which member of the Board is to act for the King's Printer should the latter be absent at any time.

BINDERY.

It has already been stated in this report that very little criticism was heard in regard to the quality of the work done by the Printing Bureau. There was, however, considerable complaint in regard to delays in the filling of requisitions; and this was especially marked in regard to work which has to pass through the Bindery, where it is stated great congestion exists. It has been contended that the facilities for handling the work in that Branch are not equal to those that exist in either the Composition or Press rooms; that the spout through which it has to go becomes

more restricted as the work proceeds. While it is true that the crowded condition of the Bindery, owing to lack of space, must be a serious handicap, there has been some evidence of a lack of good management. This ought not to be attributed entirely to the persons in charge of the Branch. Although it would appear that at least the same amount of supervision should be exercised over the employees of the Bindery as over the other rooms, there are fewer foremen in this part of the Bureau than are allowed on the average in the composition, press and other rooms in the Printing Branch. This should be remedied. The Commission have recommended elsewhere that there should be a second Assistant to the Superintendent of Printing which would enable the Superintendent, when relieved of the supervision of the cost accounting system and of contracting for the printing and lithographing done outside of the Bureau, to devote more of his time to general supervision and more especially to the Bindery.

COMPOSITION.

Some criticism has been made of the small output of the composition rooms as compared with what would be done in a private establishment. The Superintendent of Printing stated that he had conducted special tests in regard to work on the monotypes; but that while there was some improvement he was unable to get really satisfactory results from his men. We would suggest that as vacancies occur for monotype operators, they should be filled by those who show the greatest skill in the operation of these machines. The same suggestion applies also to the linotype operators. There should be little difficulty in examining applicants for appointment to these rooms and in this way the best and quickest workmen would be selected.

In their report dated October 19th, 1910, Messrs. Hyde and O'Connor condemned the excessive amount of hand composition done at the Bureau. They stated that one hundred and sixty men were so employed, on salaries aggregating $133,120 annually, and that it was a fair estimate that half of this amount might be saved by machine composition. They proposed that monotype machines should be introduced as fast as they could be assimilated, that the most capable of the present hand compositors be taught to use them, and that no new ones be taken on for a considerable period.

Since that report, the number of monotype machines has been considerably increased, but no effort appears to have been made to decrease the number of hand compositors. The reverse seems to have been the case; and we noticed in a return furnished to us that ten additional compositors were taken on in July, August and the early part of September, 1911. The principal reason advanced for the number of men on hand composition is that additional machine operators are always required during sessions, and the only way to be certain of having them when required is to give them employment on hand work during the slack season. It is obvious that there is a point where such a policy involves expense altogether out of proportion to its usefulness. The increase in the number of machines must render it possible to reduce the number of employees on hand work.

THE QUESTION OF SUPERANNUATION.

Any contemplated reduction of employees necessarily brings up the question of what is to be done with faithful employees who have grown old in the Service of the Government. The solution of this problem becomes more and more urgent each year. Mr. Secretary Norton is responsible for the statement that in the United States probably twenty-five per cent of the Servants have become incompetent from age or other reasons, and that "Administrators cannot and will not thrust out of the Civil Service old and faithful employees when they have worn themselves out and are no longer efficient." This will apply shortly with equal force to the Canadian Civil

Service. We are even now reminded of it by the Printing Bureau. Twenty-five years ago the Government took over the printing establishment of Messrs. Maclean & Roger together with their working staff. The majority of these men, then probably in the prime of life, are gradually getting beyond the age at which the retention of their services can be considered profitable. Among the hand compositors we hear of several men of sixty-five and seventy or more who are of very little use. In some cases, they are a hindrance to the employment of younger men, and their presence reduces the standard of efficiency of the whole Bureau to a greater or less extent. We are convinced that some equitable arrangement must be made whereby a living allowance can be assured to old Servants who have passed the age of usefulness and whose retention in the Service is no longer desirable.

STEADY EMPLOYMENT.

During the earlier existence of the Bureau, it was the custom to take on a number of additional men during the Session, when the work was particularly pressing, and to dismiss them when the pressure was relieved. On account of the great amount of business now always on hand, this practice has for some years been discontinued; and the principle seems to prevail that once a man is appointed to the Bureau, his position is permanent so long as he continues to behave himself. It should be possible under existing circumstances to arrange that the printing of all matter not of an urgent nature, should be delayed till the House is not in Session. Efforts are now being made to do this and with a more cordial co-operation on the part of the various Departments, it should be possible to keep all hands steadily employed throughout the year. This is not altogether the case at present, however, and we observed that some of the employees in different parts of the Bureau did not appear to be very busy.

PROOFREADERS.

This was specially noticable in the proofreading branch, where during the Session a double staff has to be employed, half for night work and half for day work. Evidence has been given to us that the proofreaders do not get through the amount of work that they did formerly and that some of the appointees of recent years are not of so high a standard of education. We believe that in future nobody should be appointed a proofreader unless he has passed a qualifying examination for the position. Messrs. Hyde and O'Connor in their report stated that there were at that time thirty-five proofreaders, and recommended that there should be more copyholders in proportion to the proof-readers; and that if this were done and certain arrangements which they suggested carried out, the staff might easily be reduced. As a matter of fact, the staff was not long after gradually increased to fifty. We are glad to learn, however, that since this inquiry was started this number has been decreased. We are of opinion that a reduction of thirty per cent in the number employed might be easily made when Parliament is not in session. One of the staff stated that in his opinion the number could be reduced to fifteen. Any reduction might first take place among the copyholders for whom special experience or qualifications beyond that of a good education are not so necessary as in the case of proofreaders, and who could be easily replaced when the Session recommences. In the meantime, proofreaders could hold copy for each other where assistance in that line is necessary.

COST ACCOUNTING.

In order to arrive as near as possible at the proper charge to be made for work performed, as well as for the purpose of making the Bureau self supporting, it has been the practice in the Printing Branch to calculate the direct and indirect cost of

manufacture and certain of the overhead charges upon each individual job, and charge it against the Department for which the work is done. In the Stationery Branch, the practice is to charge a percentage on the actual cost of handling. The object is that the King's Printer's advance account, which forms the working capital of the Bureau, should show neither profit nor loss; but come out even after the accounts with the various Departments of the Government are settled.

This procedure would have a certain value if it were fully carried out, and were on a fixed and definite basis. It might prove a useful check to ensure that Printing and Stationery, when executed by, or obtained through the Bureau, were not more costly than if obtained through private establishments. In practice, however, it is of little use for this purpose as many of the usual overhead charges are omitted. The salaries of those officials who are paid out of the appropriations for Civil Government, for instance, are not reckoned in as part of the cost; nor are depreciation and renewals of buildings, plant, and equipment, interest on capital, light, heat and power, etc., calculated. It is, therefore, clear that the amounts charged do not represent the whole cost of production. We should not, however, be prepared to take such serious exception to this were we not of opinion that the method of reckoning the percentage to be charged, over and above the actual cost, is unsatisfactory. Especially is this the case with the Stationery Branch, where the percentage is fixed arbitrarily and varies according to the nature of the goods. For example, the percentage charged on printing paper varies from ten per cent to twenty per cent on its cost value; while on small stock such as pencils, etc., it is five per cent, and on such articles as typewriters, no percentage is charged. The great objection to the present system is that it would be possible under certain circumstances by its means to cover up shortages or shrinkages in the stock. According to the Auditor General, stock taking under existing conditions is very unsatisfactory. Stock is now taken of the goods at the prices marked on them for distribution, i.e., with the percentages added. In his opinion, to cover up shortages or peculation, "all that would be necessary would be to mark a higher percentage on the goods." It tends also to make the system of accounting more complicated.

The new system of cost accounting installed in the Printing Branch by the present Superintendent is undoubtedly an improvement on that previously in force. That the rates chargeable under it for the various processes are still somewhat arbitrary will be easily seen by a reference to page 360 and Exhibit VIII. of Messrs. Price, Waterhouse & Company's report. It will be seen that four revisions of the rates took place between 1st April, 1911, when the new system was put in force, and the 18th March, 1912. Still another revision was made on the 24th August last. The tendency of these revisions would appear to be to gradually increase the rate chargeable for hand composition above, and to reduce the rate chargeable for machine composition below, the cost of the actual processes. Since the 31st March, 1911, the rate chargeable for hand composition has been increased from forty-five cents an hour to seventy-five cents an hour. The magnitude of this change will be realized when it it pointed out that the hours employed on hand composition are two and a half times as many as those employed on machine composition.

One of the chief reasons for the recommendation that the cost accounting system should be placed under the control of the chief accountant, apart from the general principle that all accounting work should be under him, is that the calculation and working out of the results of the various processes would be of greater value when done by a second party than when done by the person who is responsible for the processes themselves. The one acts as a check upon the other and their value to the Superintendent of Printing for the purpose of following the efficiency of the various operations under his charge should be enhanced thereby.

It appears to us that, as in the case of the Stationery Branch, so also in the Printing Branch the practice of calculating a percentage to be added to the actual

cost for the purpose of covering overhead charges is unsatisfactory and should be discontinued. In lieu thereof we recommend that in the case of printing, only the actual cost, direct and indirect, of the labour actually employed upon any particular job, as closely as it can be ascertained by the cost accounting system, without regard to overhead expenses, as well as the actual cost of the paper and ink used, should be charged for work executed for Parliament or for any Department of the Government; and that in the case of stationery and stores the actual invoice price only of the goods should be charged.

The overhead expenses and the cost of carrying on the Department generally could be met either, (1) by an appropriation by Parliament for the purpose, or (2) by a pro rata charge against Parliament and the various Government Departments, to be calculated proportionately to the amounts charged against them for the printing and stationery supplied to them.

It may be pointed out that as the Government has in the end to pay for everything whether it is charged to the Departments in the first instance or not, no additional cost whatever would be incurred by making either of these changes.

Their sole effect would be to simplify the accounts and to enable a better check to be kept on the proper administration of the Department.

STATUS OF OFFICIALS.

A fruitful source of trouble is due to the fact that some of the employees are members of the permanent Civil Service and others are not. Men working side by side at the same work serve under different conditions. Some can come later and leave earlier than others and some are docked their pay if they are five minutes late, while others are not. Some have three weeks holidays with full pay and some only two weeks. One clerk is granted certain privileges which his fellow worker at his side does not enjoy. There appears to be no good reason why all should not be upon the same footing. We are of opinion that all who perform what may be classed as administrative and accounting work should be made members of the permanent Civil Service. The present situation conduces to jealousy and lack of united work. Moreover, the Bureau has many cases of men doing important duties who are worse paid than those who have less important ones to perform. Routine work should be assigned to the junior officials while the more important and responsible work should be done by their seniors.

Considerable comment also is current in regard to the fact that two persons are borne on the pay-sheets, credited with full time, and receive pay regularly without ever coming near the Bureau. We understand these cases are of long standing and one of them may be considered in the nature of a pension. If that is so, it should appear as such and be sanctioned by Parliament; the man should not appear as a wage-earner. The moral effect upon other employees is bad. Besides which the Timekeeper now has to certify as correct time-sheets which in this respect are incorrect.

POLITICAL INFLUENCE.

There appears to be a very general feeling throughout the Bureau that party politics enter largely into the running of the institution. New employees are taken on in the first instance rather on account of their party affiliations than of their fitness to fill the situation to which they are assigned. Once in the Bureau, they practically become permanent employees, and have a disposition to look to political influence outside to gain them preferment, rather than to their own efficiency. We have had various complaints as to the difficulty of maintaining discipline among such men. One foreman described a certain occasion when, after having suspended an employee for constant drunkenness, in spite of innumerable warnings, he was

threatened by the Party organization, and even advised by the Superintendent of his Branch, that he would probably lose his own job if he did not take him back. The man was, however, drunk again on the day he was to be reinstated and the King's Printer dismissed him.

It is impossible to speak too strongly as to the necessity of keeeping politics out of the Printing Bureau. The majority of the work is technical, and new appointees should be selected solely on account of their fitness for the position. There should not be any great difficulty in examining persons in advance as to their qualifications for filling most of the vacancies in the Bureau. Once in the Bureau, promotion should be entirely by merit, and a man who endeavours to bring political influence to bear should be thereby disqualified.

Nothing will more certainly destroy the efficiency and usefulness of the Bureau than political interference. A statement which was drawn up for us showed a total of seventy-nine new appointments made for the four months ending 1st November, 1911, of which there were no less than seventy-two who were taken in between the 31st July and the 21st September, that is betweeen the dissolution of Parliament and the General Election.

It is impossible to speak too strongly as to the necessity of keeping politics out of additional help being required for the preparation of Voters Lists. The positions to which most of these new employees were appointed precludes such an assumption, especially as they were all kept on after the Voters Lists were completed. During the month of September a large number of employees were away on vacation and on the Election Day there were one hundred and twelve absentees.

Again, we cannot help thinking that it was with a pretty good idea as to its political effect in their minds that the deputation waited on the then Secretary of State, when the General Election was imminent last year, and pressed their request for the grant of an annual vacation for all employees. In spite of the fact that only a few months previously he had proposed to abolish the five minutes grace granted on arriving at and leaving the Bureau, on the ground that it involved a loss to the country of some $10,000 annually, Mr. Murphy not only took no action in this respect, but he granted two weeks additional holidays which, according to a calculation based on the same grounds, would involve a further loss to the country of $20,000 annually. This vacation was in addition to the sixteen Statutory and special holidays the employees were already receiving, and made an aggregate of twenty-eight holidays without loss of pay.

It may be mentioned that a number of the employees of the Bureau were constituents of the then Secretary of State, and that more than one of them took an active part in the Election. The caretaker testified to us that he was more than once summoned to the Liberal Committee Rooms during office hours where he had consultation with Mr. Murphy.

OUTPUT NOT EQUAL TO PRIVATE ESTABLISHMENTS.

While it may be true that in all Government establishments, the employees have a tendency to feel that they are not called upon to work as hard for the Government as they would for a private employer, it would appear that matters are even worse in this respect at the Bureau than they are in other Government establishments. The Superintendent of Printing has expressed the opinion that "a commercial institution with the same number of people, not the same people," and with the same staff, would do twenty per cent more work than the Bureau. One reason advanced for this opinion was that the Bureau is restricted in the wages it is permitted to pay to the employees, to the scale fixed by the Printers Unions for similar work in Toronto, Montreal and other centres and cannot, as is the custom in private establishments, pay higher wages to exceptionally competent workmen; and that this

takes away from the employee the incentive to increase his output. It may be pointed out, however, that the larger amount of holidays that are granted to the employees of the Bureau than would be granted to those of a private establishment, is equivalent to an increase of nearly nine per cent of their wages, and should be sufficient when permanency of employment is reckoned to attract the highest grade of workmen to the Government Service.

We noticed also that the cleaning of the Bureau is costing over $15,000 a year, which is paid partly out of Civil Government Contingencies and partly out of the King's Printer's advance account. This appears to be an extravagant charge and is, in proportion to the floor space, about double the cost of the cleaning of other Government establishments. If a new Bureau is built vacuum cleaners should be installed as the elimination of dust is especially desirable in a printing establishment.

The cost of the Bureau has been increasing rapidly of late years. The salaries and wages paid on the 31st March, 1910, amounted to $523,360.25, while on the 31st March, 1912, they had increased to $645,872.52, or about twenty-nine per cent in two years. The reasons given are the increase in the work and in the wages of mechanics which took place in June, 1911. Another contributory reason advanced was the additional holidays to the employees granted in August, 1911. We scarcely think, however, that the reasons given are sufficient.

LIST OF EMPLOYEES.

A permanent record should be kept by the Secretary of all persons employed in the Bureau, showing the date of their first employment, age, services, wages, etc. The King's Printer should also be supplied periodically with a confidential report as to the efficiency of all the employees, whether in the Civil Service or not, with a note of any cases of misconduct. A statement should be drawn up monthly for the information of the Minister, showing the number of employees and wages paid in each branch and section to enable him to keep a better check on what is going on in the Bureau.

A definite age limit should be fixed beyond which no person should be eligible to enter the service of the Department.

DEPARTMENTAL REPORTS.

We are informed that the lack of system in some of the Departments in the preparation of their Reports for publication is such as to cause a great deal of unnecessary expense and loss of time at the Bureau. In some instances, Reports or portions of Reports have been sent in to be printed before the officials who edit them have apparently made up their minds as to the form in which they are finally to appear. It is doubtless an advantage to have copy sent in from time to time as it is prepared without having to wait for the completion of the whole report; but every effort should be made to have it in such shape that the Compositors can set it up in the form in which it will ultimately appear without the necessity for extensive revision. We are informed that the penmanship in some cases is poor and difficult to read; and not only causes the Compositor to make more mistakes than he would if it were thoroughly legible or typewritten, but occasions him great loss of time in trying to decipher it. The routine through which a Report has to go before it finally appears in print is as follows:—The copy on receipt is set up in type and a proof taken which is read in the Proofreaders' room. The type is then corrected and a further proof taken, which is sent to the Department concerned, who correct and revise the proof. It is then returned to the Bureau and the type again corrected. A proof is then taken and read again in the Bureau, after which it is sent to the Department for final approval. It will readily be seen, therefore, that should the

Editor change his mind as to the material to be printed or make many additions or alterations, a great loss of time and money takes place. Unfortunately, we are informed that this not infrequently happens and that alterations are sometimes so extensive that the work has practically to be set up afresh, and there is no end to the number of revises asked for. In cases of rush orders, the Bureau officials complain that no special efforts are made in the Departments to correct and return the proofs to them without delay and by special messenger. No order should be marked "rush" by the officials of a Department unless they themselves are ready to deal expeditiously with it when it again comes into their hands.

Copy which is difficult to decipher is responsible for far greater expense and loss of time than is generally realized. Especially is this the case with machine composition. Not only is the Compositor forced to work slowly, but in the case of the linotype machine for instance, the one most commonly in use, the misplacing of a single letter involves the resetting and recasting of a whole line. Then if the alterations to the proof are such as to overrun even one line, it may be necessary to reset whole paragraphs and overrun paragraphs and pages. Moreover, as the alteration of a single letter in the linotype involves the recasting of a whole line, there is always danger of another mistake not previously made appearing in another part of the line, where there is a possibility of its being overlooked by the Proofreader.

Most of the Departmental Reports have to be presented to Parliament within the first few weeks after the opening of each session. This, if properly observed, would result in having them printed between the sessions, when other work is not so pressing, and would be of great assistance to the Bureau. Efforts have been frequently made in the past to have the Reports sent to the Bureau as early as possible, but they have not been as successful as they might have been. There should be greater co-operation between the Bureau and the Departments, both in regard to this matter and in regard to the way in which the Reports are sent in. It must be borne in mind that poor copy is not only a cause of expense and delay to the Department which sends it in, but takes up valuable time in the Bureau, and restricts the volume of work they might otherwise be able to do; thereby creating an excuse to give work to outside firms which should be done in the Bureau. In both cases the Government is a loser.

FRENCH TRANSLATION.

The delay which takes place in the production of the French version of some of the Departmental Reports ordered by Parliament is the cause of great dissatisfaction. With the exception of some six or eight Departments which have recently shown great improvement in this respect, the ordinary course pursued at the present time is as follows:—

The Report is prepared in the Department in English and forwarded to the Bureau, where after the final revision takes place, it goes to press. Ordinarily copies of the "signatures" (sheets containing sixteen pages at a time, which are ultimately bound together to make the completed volume), as soon as they are printed are sent to the Translation Staff in the House of Commons who proceed to translate them into French. If the Translators are pressed for time, part or whole of the Report may be sent by them outside to be translated by parties designated by the Speaker for such employment. The translation is then sent to the Bureau, where delay is again liable to take place, as the signatures sometimes arrive irregularly and out of order and the Bureau does not print the French translation while Parliament is in session, the excuse being no doubt, that other pressing demands for printing should have precedence over Reports which have already appeared in one language.

The Translators blame the Bureau for the delay and the Bureau blames the Translators. The Chief Translator testifies that he sometimes cannot get any portion of the Report until the whole thing is printed and bound; that if he could get the

"signatures" regularly as soon as they are struck off, he could keep the translation going *pari passu* with the printing, and have the whole French version ready for the printer by the time the English edition is printed.

The Bureau officials on the other hand complain that the French copy, which they receive from the Translators, is generally in such shape when it arrives at the Bureau that it causes a great deal of delay and annoyance to the Compositors. It is frequently badly edited, and often so badly prepared as to be almost undecipherable.

Then again, after it has been set up in type and a proof sent to the Chief Translator, it is often returned, not only with typographical corrections, but with corrections to the translation itself. The Chief Translator's remark in regard to this was that in reading the manuscript they were more likely to overlook faults and poor translation than in reading the printed form. In these days of typewriting there is no excuse for having copy put into print before it is edited and corrected.

The Confederation agreement, crystallized into law in the British North America Act, makes the use of the French language obligatory in the records and journals of the Houses of Parliament; and Parliament has provided that official publications ordered by it shall be printed in both languages. It is not a proper compliance with this provision to delay the French version of these official publications for more than a year before they are printed. Some of the French versions of Departmental Reports for the year ending 31st March, 1911, have not yet been published. Sooner or later the French edition must appear and it will be not only more economical and useful, but much more in keeping with the spirit and letter of the law as it now exists, if publications were issued as nearly as possible simultaneously in both languages.

We strongly recommend that the translation into French of Departmental Reports be made in the Department itself while the English copy is in course of preparation and before it is sent to the Printer. The six or eight Departments referred to above as being an exception to the rule, already pursue this course; and they send the English and French versions of their Reports to the Bureau at the same time and in good shape of printing. For the purpose of translation and especially for the better translation of technical expressions, the Department should employ one of its own officials; or failing one qualified in every way for the work, employ one of the official translators, the Department being held responsible for the correctness of the translation, and for keeping it up to time. In Reports in which technical expressions appear, the necessity for this is obvious. Both English and French versions should be corrected and typewritten, and carefully punctuated and edited before being sent to the Bureau. Correcting translation or editing after the copy has been put in print is not only extravagant and costly, but the cause of annoying delays. In the matter of Reports composed mostly of tabular matter, the bilingual method adopted in such Reports as "Criminal Statistics" and "Unclaimed Balances" could be extended to other Reports with advantage. This can best be done when the translation is made in the Department of origin itself. One Report with the headlines printed in both languages is an economy over two, both in time and money.

FRENCH HANSARD.

In the matter of Hansard, there is not so much cause for complaint of delay or discrimination between the two languages. Indeed here, the French language is granted greater privileges than the English. Speeches made in the House are taken down as delivered, whether in English or French, and are printed and distributed as "Unrevised Hansard" the following morning. We have made inquiries into the feasibility of having the French translation of the English portion of Hansard reports printed concurrently with Unrevised Hansard; but if it were attempted, it would necessarily for various reasons be so imperfect that we do not recommend it. After

the original Unrevised Hansard is in print, a translation into French is made of all speeches delivered in English and this is printed and distributed the following day as the French Unrevised Edition. No similar service is performed for the English reader by the translation of speeches delivered in French into English at this stage, and the English speaking public do not get a translation of the French portion until considerably later on when the revised edition appears. Moreover, a fortnightly index is issued of the French unrevised version, while no similar index is issued in English, although it could be compiled with very great advantage to Members of Parliament at a very slight additional expense. Later on, after corrections of their speeches have been made by the Members themselves, "Revised Hansard" is prepared and translated into both languages, and indexed, and distributed. As a general rule the French Unrevised Hansard is distributed within thirty-six hours of the delivery of the speeches. Delays, however, occasionally take place which are sometimes attributable to delay in sending the translation to the Bureau and sometimes to carelessness among the distribution officials, either at the Bureau or in the House of Commons. There is no good reason why the French Unrevised Hansard should not be distributed at the House of Commons before noon on the second day after the debate has taken place.

It may be well to mention at this point that the staff which translates Hansard is entirely separate and distinct from that which translates the Departmental reports and other Parliamentary publications. The former, composed of a Chief Translator and eleven other translators, have offices in Sussex Street; two of their number being permanently stationed at the Bureau for the purpose of proofreading and correcting translation. The latter, composed of a Chief Translater and nine translators, have their offices in the House of Commons. Just as in the case of the French copy supplied by the Parliamentary translators, the officials of the Bureau complain of the poor copy supplied by the Hansard translators. The chief cause of complaint is that after the type is set up the proof is amended, not only for typographical errors, but for the purpose of improving the translation itself. It has been admitted by the Chief Translator of Hansard that this is true in some cases; and his explanation is that some members of the staff are incompetent and others do not attend to their duties. He himself is at a serious disadvantage; for though styled Chief Translator and under the Rules of the House having special duties assigned to him, he is in the same grade of the Civil Service and receives the same salary as all but one of the other translators. This condition renders the exercise of efficient control by him a matter of great difficulty. His office should carry with it a higher position in the Service and a better salary than that of the other translators in the Debates Branch, who should be definitely placed under him; and he should be made in fact, as he is now in name, the head of the branch.

Five typewriting machines have been supplied to the Hansard Translators; but they are only used in cases of great pressure, as the translators have to pay for the services of the persons who operate them out of their own pockets. We consider that persons to operate these typewriting machines should be employed and paid for by the Government and that all copy should be sent to the Bureau in typewriting, properly edited and with the translation properly corrected in advance. If typewriter assistants were employed and inefficient and careless translators dismissed, there is no doubt that better results could be obtained and a saving effected, not only in the Printing account, but also in respect of the staff of translators.

The whole matter of the French version of official publications demands serious attention. We satisfied ourselves by personal inspection that the complaints of the officers of the Printing Bureau regarding the copy are well founded. The same condition existed at the time of the investigation of 1910 and Messrs. Hyde and O'Connor called attention to it in strong terms. When they are face to face with the

conditions complained of and no effort is made to remedy them, there is no wonder that the Bureau officials become discouraged and take little interest in turning out the French Edition in good condition and up to time.

PARLIAMENTARY BLUE BOOKS.

There can be little question that a great improvement could be effected in the character and material of the Annual Departmental Reports printed by Order of Parliament. Not only is there in some instances, duplication and overlapping in the reports printed by different Departments, but in some reports the material is ill-arranged. Some of it, we would consider unnecessary and apparently inserted for the purpose of filling. We would not wish it to be understood that these remarks apply generally—some of the Blue Books are excellent compilations.

In both England and the United States, the question has received much attention and different methods have been employed to deal with it. Neither of these methods, in our opinion, quite meet the situation in Canada. The Civil Service Commission in 1907 recommended that the Blue Books should be reviewed by some authoritative body with a view to their simplification and co-ordination, and suggested a joint Committee of the two Houses. Later on, the then Secretary of State in his report of November 8th, 1910, spoke of the importance of the question and the saving to be effected by a satisfactory solution and recoommended another method of dealing with it. The late Government, however, took no action. Pending the creation of some authoritative body which could go thoroughly into the matter, we beg to offer some suggestions regarding the handling and distribution of the Blue Books in their present form, which we hope may prevent much of the waste which now takes place.

DISTRIBUTION OF OFFICIAL DOCUMENTS.

The free distribution is carried out from two separate mailing lists—Parliamentary and Departmental. The Parliamentary distribution is done direct from the Bureau, while the Departmental is done by the Departments themselves, with the exception of the *Labour Gazette* and the Exchequer Court Reports, which are distributed by the Bureau. For the Parliamentary distribution, two lists are supplied —one by the Joint Committee on Printing and the other by the Debates Committee. The former list is never revised, while the latter is corrected each year. No comparison is ever made between these lists and the Departmental lists. The official in charge of the Distribution Room at the Bureau has only held the office for a short time. He gave it as his opinion that not only are there cases of duplication of names, but even of triplication, when the distribution by Members of Parliament is taken into consideration. In looking over the lists, he had found the names of men who had been dead for years and of Clubs and other institutions that to his knowledge had gone out of existence, to whom reports of all kinds, including bound copies of Hansard, etc., were being sent. Strange as it may seem, even in the Bureau itself, there is a second branch sending out mailing matter, including the *Canada Gazette*, *Labour Gazette* and Court Reports. The mailing list of the *Canada Gazette* a few weeks ago showed amongst other such instances, that the *Gazette* was still being sent out addressed to a Judge who had been dead for more than ten years. The Distribution Branch has been working short-handed for some time. It should be strengthened at once and the official in charge given an opportunity to go thoroughly into this question.

Each Department has its own mailing list also; and some of them which send out a large quantity of printed matter have a considerable staff constantly engaged in the work of mailing.

EXTRA COPIES.

That there is a great deal of waste cannot be doubted. A reference to the annual report of the Department of Printing and Stationery for 1911 shows that some 12,500 copies of various Annual Reports were that year printed at the Bureau over and above those that were distributed or taken into stock. On inquiring as to what became of these we were told that there was nearly always a surplus of each Departmental Report after the distribution was made, and that these were thrown into the waste-paper basket. If these figures are correctly given, they show that on the average two hundred and forty more copies of every annual report, both English and French, are printed than are required and that the surplus copies are immediately thrown away—a condition that seems almost incredible. The head of the Distribution Branch gave us a list of some fourteen hundred and sixty volumes of Blue Books just printed that, within the last two or three weeks, he had had to consign to the waste-paper basket as the Departments refused to take any more and he had no place to keep them. Waste paper is collected from the Houses of Parliament, Government Departments, and the Printing Bureau, by a contractor who pays so much for the privilege; collects perhaps from three hundred to four hundred tons a year of paper of all descriptions, including bound books; and sells it to various paper manufacturing companies. One of the companies informed us that in a single year they had themselves received fifty-seven and a half tons of books alone from this source. And it must be remembered that this only accounts for a portion of the waste in Ottawa. Outside of Ottawa, the waste is probably as bad or worse. People have a fancy that they would like a certain Blue Book and by some means get on the mailing list. Once there, the book is regularly sent; although the person to whom it is addressed may long have got over his fancy and may throw the book away as soon as received. Two copies of every Departmental report, as well as large numbers of the reports of Standing Committees are sent to every Member of Parliament, whether they want them or not. To many Members they are simply a nuisance, and after encumbering the mail, are consigned to the waste-paper basket. Certain of the Blue Books are of special interest to certain Members and are the only ones they look at; while other Blue Books are of interest to other Members. Why should not a Member select what books he wants and have those only sent to him? Nor does the only waste occur when the books arrive at their destination. As we have already pointed out, thousands more are printed than can be disposed of or even kept in stock; and within a few hours of completion are consigned to the waste-paper basket without ever leaving the Bureau. We have little doubt also that there are more sent to some Departments than are wanted there.

DISTRIBUTION DIRECT FROM THE BUREAU.

We would urge most strongly that the distribution of all printed documents be carried out direct from the Bureau. Each Department should send its regular mailing list there, as the Department of Labour already does in respect of the *Labour Gazette*. These lists should be scrutinized carefully and compared with the Parliamentary lists to see that there is no duplication, and one general mailing list for the free distribution of documents should be made out. Copies of the list should be sent to the various Departments, and revisions thereof forwarded monthly by them to the Bureau, where there should be an official regularly charged with keeping the mailing lists up to date. This official should keep in close touch with all Departments for mutual assistance with this end in view. He should also communicate from time to time with private individuals, institutions, and newspapers who are on the list, with a view to ascertain whether they make use of the reports, and desire any or all of them continued. We believe that by the use of care and discretion, it would be found possible to reduce the free mailing list to an enormous extent, and to do so

without preventing any one entitled to receive official publications from obtaining all reports that he is able to make use of. These latter proposals would not, of course, apply to documents such as those issued by the Agriculture, Immigration or other Departments for educational and like purposes, which are printed at the expense of the Departments themselves. The distribution of these would still be at the discretion of the Departmental officials, though the actual work of despatching would be done direct by the Bureau; nor would they prevent each Department receiving a supply for casual distribution or for its own use.

DISTRIBUTION TO MEMBERS.

In regard to distribution to Members of Parliament, we would suggest that a printed list of all documents, as published, be sent to each Member weekly, with a requisition attached, in convenient form for mailing, whereon he could indicate which of them he desires to have sent to him.

METHOD OF DISTRIBUTION.

If the foregoing proposals are carried out, we are satisfied that they will result in an enormous annual saving to the Government, both in respect of the number of documents required and also in respect of the cost of folding, addressing and mailing those which are sent out. The Printing of Parliament last year cost $314,053.41. The substantial reduction which may be looked for in the number of copies printed and sent out, would mean a considerable diminution in this sum, as well as a considerable saving to the mail service.

The saving which can be brought about by centralizing the distribution of documents at the Bureau will mount up into many thousands of dollars. There are many millions of documents distributed annually by the Departments as well as those sent out direct from the Bureau. Several of the Departments have addressing machines, but the Bureau, although it has an addressing machine, still in the main adheres to the old method of sticking on a printed address by hand. None of them have wrapping machinery and a very large number of publications are sent out in envelopes. The saving in envelopes alone by the use of a modern mailing machine should amount to some $6,000 or $8,000 annually. For instance, envelopes to the value of nearly $5,500 are used yearly for this purpose by the Departments of Agriculture, Trade and Commerce and the Post Office alone.

A mailing machine such as is in use in many establishments in the United States, not only addresses, but wraps and pastes the documents ready for mailing and delivers them into mail bags ready for despatch direct to the mail car.

The amount of matter which would be daily despatched from the Bureau would justify the creation of a Sub-Post Office there and the documents could be sorted into the bags for the different points on the spot. This would be done by the machine automatically. The expense of handling many times over would be saved.

At present, the usual process that a single document has to go through is as follows:—It is tied up roughly into a bundle with others, at the Bureau and delivered to the carter who drives it to the Department. There it has to be carried in and deposited in the office where it is to be prepared for mailing. Then it is separated from its companions, wrapped and pasted by hand and passed through the addressing machine. Or, it may be, it is placed in an envelope already addressed. It is then again carried to a mail cart, which takes it to the Post Office where it is sorted into its proper bag and conveyed from the Post Office to the train.

The plan we propose saves all this. The book as it comes from the printer passes direct to the distribution room where it is put through the mailing machine, which in turn delivers it into the mail bag, which is conveyed direct to the train.

The saving effected by one of these large mailing machines is very great. The makers claim that the machine worked by one man and two girls will handle from 3,000 to 5,000 publications per hour. That is, it will wrap, paste, address and deliver them into the mail bags. We belive that the salaries of probably some fifteen men at least now employed throughout the Service, on this work alone, could be saved; the number of carters necessitated by the double handling reduced; and the Post Office work greatly facilitated. Further, by having documents sent out direct from the Bureau, the official in charge there could be able to see that no larger number of copies of each document were printed then were actually necessary. Let us reiterate that in making these recommendations we are referring only to documents sent out on regular mailing lists. The Departments will still keep in their own hands what may be termed "casual" distribution.

STANDARDIZATION OF STATIONERY.

The question of the Standardization of Stationery and office Supplies is one of long standing. In the year 1910, the Under Secretary of State held a conference with the Deputy Heads of the various Departments, at which this question among others was the subject of discussion. Mr. Mulvey reported that the project was highly approved of by all, and that there was no reason why it should not be brought about when the then surplus stock of stationery at the Bureau was disposed of. In addition to corresponding with the Deputies, the Commissioners took evidence from the officials in charge of stationery in various Departments, in order to learn their views from a practical standpoint. There was a general consensus of opinion in its favour, and the Commissioners recommend that standardization be undertaken without delay, with a view to having regular standard sizes and qualities of stationery definitely established, and the present very large variety of articles which may be requisitioned for greatly reduced. The Superintendent of Stationery informed us that he had for some time been at work on this subject, but while we do not wish to minimize in any way the great value his experience must be in such a matter, we feel that any individual who sets out by himself to draw up a list of articles to the use of which the various Departments are to be restricted, would work under a serious handicap. We would, therefore, propose that a Committee be formed composed of Mr. Patenaude and the Clerks in charge of Stationery in three or four of the largest Departments. In addition to standardization in the ordinary sense, they might consider the question of uniformity in size and style of Government cheques, pay-lists, invoices, etc. They should also take into special consideration the qualities of paper, ink, and carbon paper with a view to ensuring the permanency of official documents. We are of opinion that one of the aims of the Committee should be to reduce the number of the various grades, qualities and sizes of stationery supplies to the lowest figure, consistent with efficiency. Concentration in a smaller list of articles would mean a saving both in the Bureau and the Departments. By reason of the larger quantity of each article that would be required, it would also enable tenders to be more easily called for their supply; and by bringing in competition, reduce the prices paid. There would also be less probability of articles deteriorating, or getting out of date, and the stock on hand as a whole need not be so large as at present. As far as possible all paper supplies should be watermarked and other articles stamped "Government of Canada."

As soon as the work of the Committee is completed and a revised stock list has been approved of by the Governor-in-Council, a distinguishing number, or letter, or both should be assigned to each and every item for the purpose of identification and of facilitating requisitions. These distinguishing numbers or letters should be arranged in series in such a way as in themselves to indicate the nature of the item.

A stock book should be kept in the stores branch in which should be assigned to each item, in regular order, sufficient space to keep a continuous record of the quantities received and issued and the balance on hand after each entry.

In regard to each separate item a certain quantity should be established as the minimum to which the stock may be reduced before being replenished. This minimum quantity should be entered against each item so that a report can be made instantly to the Superintendent when the stock falls below it.

This procedure would enable a comparison to be made at any moment of the quantity of any goods actually in stock with the quantity appearing in the books.

TYPEWRITER MACHINES.

In regard to typewriters we have made special inquiries. There are a number of different makes in use, and the prices paid for them are little if anything lower than those for which they can be purchased individually by the public. A large number of typewriters are purchased each year, some for renewal of worn out stock, and some on account of increasing business. Last year the number of new typewriters bought was four hundred and thirty for a sum of nearly $56,000 or an average price of $130 each. A report on the subject shows that eighty-eight worn typewriters replaced by new ones during that time were allowed for by the agents at an average of $25 apiece. It is open to question whether many of these could not have been made serviceable at small cost. A typewriter was purchased in 1910 for $145 and was allowed for on a new purchase nineteen months later at $15. The Commissioners are of opinion in view of the fact that the single keyboard is now coming almost universally into use, there would be little inconvenience if in future one make of typewriter were supplied for the whole Service. There is no doubt but that like some of the large commercial establishments, the Government would be able to obtain their typewriters at a greatly reduced price, by advertising for tenders for the whole Government supply for one or more years, and having the different manufacturers compete with each other for the order. Tenders might be asked for the supply of say four or five hundred machines, to be delivered from time to time as required and, as regards the Outside Service, at any points where they might be wanted. Most firms are prepared to deliver machines at about the same price in any part of the Dominion. It has been currently reported in the Press that the prices quoted to the Western Union Telegraph Company for the filling of a large contract by the makers of the best known machines ranged from $42 to $65. Similarly the Government should be able to make a contract which would save half of the large sum at present annually expended.

The Commissioners believe that, in addition to the apparently excessive number of old machines being discarded, there is some loss to the Government in the repairing of typewriters. There should either be an expert specially engaged to keep all Government typewriters in order; or an Inspector to look at machines to which repairs are required, estimate the nature and value of such repairs, and check the amount chargeable for the same. In either case, such official should be borne on the staff of the Superintendent of Stores.

STATIONERY STOCK ON HAND.

The inventory of stock on hand in the Stationery Branch on the 8th August, 1910, given in the report of Messrs. Hyde and O'Connor, showed a valuation of $283,424.30. The present Superintendent has been able to reduce this until in the inventory taken in the present year the stock amounted to only $174,423. The former valuation, however, was at the "issue" price, while the latter was at "cost" price.

On the other hand Bureau supplies to the value of $13,492.35, which have not previously been calculated, have now been included in the valuation. It has been pointed out to us, that this inventory still includes typewriter ribbons to the value of about $21,000.00, which have now become useless, in so far as the Government Service is concerned, and carbon paper to the value of about $5,000.00, which is also now of no value. We are of opinion that this useless stock should not appear year after year as an asset, but that it should now be disposed of by auction. This is an exceptional case and its treatment should not be taken as a precedent. With proper precautions a recurrence of the trouble should be impossible.

WEIGHING GOODS IN.

We are not satisfied that the checking of goods received into store is thoroughly and accurately carried out. Messrs. Hyde and O'Connor called attention to the fact that in the case of heavy weight papers, only a few rolls were weighed, and if they scaled right the balance were assumed to be correct. We could not find that any additional precautions had since been taken to protect the interests of the Bureau. Further than that, having noticed that one of the scales appeared to be out of order, we requested an inspection by the proper authorities, with the result that it was found that of the five scales in the Bureau ranging from fifty-five pounds capacity to two thousand five hundred pounds, three were incorrect, including the largest, which had not been tested since 1898. One of the scales had not been tested for thirty-five years.

REQUISITIONS FOR STATIONERY STORES.

We find that many of the Departments requisition for stores in small quantities from day to day just as they happen to need them, without attempting to calculate in advance the amount that they will require and making periodical requisitions therefor. Some of the Departments require this latter procedure from their Outside Service, and we recommend that it should be done as much as possible by the Departments themselves in their dealings with the Bureau.

STORES FOR THE OUTSIDE SERVICE.

It has been brought to our notice that considerable waste of stationery supplies takes place in some offices in the Outside Service. In making requisitions officials should give a statement of all supplies expended and still on hand, and these should be closely checked up. Requisitions for stores required for the Outside Service should be filled at the Bureau and the goods packed and distributed direct from there. This is done to a small extent now, and should be carried out universally in the future. It would save the double handling from the Bureau to the Department and from the Department to the Post or Express Office. This, of course, does not apply to such things as typewriters and typewriter desks for distant points, which it may be found more economical to purchase locally. If our recommendations in regard to the direct distribution of documents is carried out, all parcels for mail would be handed to the Post Office at the Bureau.

GENERAL REMARKS.

One official after another has called our attention to the difficulty they labour under owing to the excessive noise in the large general office of the Bureau. After the investigation of 1910, partitions were torn down and a number of separate offices were merged into one large room, where from thirty-five to forty clerks are now employed. In this room, business is also done with the public and six separate

telephones are constantly in use, as well as numerous typewriters, adding machines, etc. The clerical staff of three different Branches are seated side by side and the noise and bustle all round must be most distracting. We are informed by officials engaged in calculations and figuring that it is almost impossible for them to do their work. We hesitate to recommend partitioning up the whole office again in its original form, but we think that something must be done to deaden the present babel of noise. Possibly the different branches now all in the same room might be partitioned off from each other, or at least some of the noisiest portions of the room should be partitioned off. This is a matter of detail which could be well left to the proposed Board to agree upon. It is possible some of the old partitions may be still in existence or glass partitions might be used with advantage.

There is now only one system of lighting at the Bureau—electricity—and on two occasions within a single week this was cut off for a period, putting a stop to work until the wires were repaired. In an establishment employing so many hands every stoppage, whether of long or short duration, is a matter of considerable loss; but in addition to this there might be considerable danger in such numbers of men and women having to leave the building in the dark. Gas is already supplied to the Bureau for manufacturing purposes and gas lights might at least be supplied at the time clocks and in the passages and on the stairways for use in an emergency.

We are glad to find that in several respects changes and reforms which were suggested and discussed during our examination of some of the leading officers have already been carried out. We have, therefore, considered it unnecessary to mention them in this report. We desire to thank the officials who gave us so much assistance during our enquiries. We were impressed generally by the zeal for their own particular work which was apparent in most of the officers with whom we came in contact. If any changes in organization made in consequence of this report result in closer co-operation of the various branches, we are confident that the spirit we have observed will result in greatly enhancing the value of the whole Department.

All of which is respectfully submitted.

G. N. DUCHARME,

R. S. LAKE,

Commissioners.

Ottawa, 8th November, 1912.

SUB-REPORT RE DEPARTMENT OF PUBLIC PRINTING AND STATIONERY.

By Messrs. Price, Waterhouse & Co.

MONTREAL, June 26, 1912.

The Public Service Commission,
Ottawa, Canada.

DEAR SIRS,—Acting under your instructions we have made an investigation of the business methods of the Department of Public Printing and Stationery, and now have the honour to submit the following report on the results of our examination.

The scope of our enquiry, which was in the main determined upon as a result of conferences with your Commission, called for an investigation of the entire business system, including the methods of accounting in force, with a view to determining what changes or improvements could be instituted in the organization and conduct thereof; but it has not been extended to cover a detailed audit of the transactions of the Department.

Many of the recommendations made herein must be considered as tentative, as we have not had an opportunity to fully consider the relationship of this Department to other branches of the service; and more particularly to the Departments of the Auditor General and of Finance.

We would wish to make it clear that our criticisms are directed at methods and not at individuals and that we are impressed by the fact that a general desire for improvement appears to pervade the Department, and that several important reforms have been recently instituted.

In making recommendations in this report we have not considered the limitations of the existing laws and it is possible that in order to carry into effect some of the suggestions, it may be necessary to revise the present statutes.

ORGANIZATION OF THE DEPARTMENT.

The Department was established in 1886 by Act of Parliament entitled "An Act respecting the Department of Public Printing and Stationery" (49 Victoria, Chap. 22), which has been amended from time to time. The revised Act under which the Department is operating at present is set forth in Chap. 80 of the Revised Statutes, 1906.

The Department is presided over by the Secretary of State and the service is directly administered by the King's Printer and Controller of Stationery, who is the Deputy Head of the Department.

The King's Printer is appointed by the Governor in Council by commission under the Great Seal. The position is fillled at present by Mr. C. H. Parmelee, who has held office since February 1, 1909. His duties, as set forth in Section 5 of the Act, are as follows:—

(*a*) The execution and audit of all printing, stereotyping, lithographing, binding work, or work of a like nature, and the procuring of the material therefor.

(*b*) The purchase and distribution of all paper, books, and other articles of stationery of whatsoever kind.

(*c*) The sale of all books or publications issued by Parliament or other Departments.

(*d*) The audit of all accounts for advertising.

Under Sections 20 and 29 of the Act referred to it is provided that printing and stationery for the use of the Intercolonial Railway and the Prince Edward Island Railway do not require to be obtained from the Department, but all accounts therefor must be examined and certified by the King's Printer before payment.

We note that the King's Printer audits the accounts for advertising of the various Departments with the exception of those of the Immigration Branch. As our investigation has not included an inquiry into the operations of that Branch, we are unable to express an opinion as to whether or not it would be preferable to place its accounts under the audit of the King's Printer, but theoretically it would appear better to do so.

At the present time the work of the Department is divided into the following four main sections, viz.: Purchasing, Stationery Stores and Distribution, Printing, and Accounting. No clear line of demarcation is drawn between the work of these divisions, but for the sake of convenient reference and in order that you may more clearly follow out the work of the Department as a whole, we would report upon the work and methods of each in the order named.

PURCHASING.

The work of purchasing is one of the most important divisions of the Department. During the year ended March 31, 1912, the purchases aggregated over one million dollars, of which about one-third represented the value of the printing and lithographic work placed outside.

The officials of the Bureau who are now in charge of the purchasing, subject to the approval of the King's Printer, are:

(*a*) The Purchasing Agent.
(*b*) The Superintendent of Printing.

(*a*) *Purchasing Agent.*

The present Purchasing Agent, Mr. S. P. Grant, was appointed by the Secretary of State in February, 1911, without an Order in Council, presumably with a view to affording a check on the purchases of the entire organization. His duties appear, however, to be limited to the purchase of supplies for the Stationery Department and miscellaneous supplies for the Printing Bureau.

We are informed that about forty orders on an average pass through the Purchasing Agent's office each day, or, say, 12,000 orders a year and about twenty or thirty letters each day.

The methods of ordering and purchasing which are followed differ according to the quantities and nature of the supplies required, but they may be considered under the following classifications:—

(*a*) Orders for supplies in large quantities which are filled by formal tenders received in response to request by the Purchasing Agent.
(*b*) Orders for supplies which are filled by quotations received by letter upon request of the Purchasing Agent.
(*c*) Orders for small supplies under $100 in value, made by Purchasing Agent upon his own authority.

Tenders are invited by letters addressed to dealers and not by advertisement; a list of dealers is kept in the Department but invitations to tender are not necessarily limited to names appearing on this list.

In the case of the larger purchases tenders are received by registered mail and are opened on a given date by the King's Printer in the presence of two witnesses, who initial them. The award is made by the King's Printer and it is claimed that the lowest bid is accepted, provided conditions as to quality and delivery, etc., are complied with. We examined the tenders for a period approximating two years and so far as we could determine the rules regarding their award had been complied with, excepting in some instances of minor importance.

In the case of purchase of supplies by quotations, the letters from dealers quoting prices are received by the Purchasing Agent and he decides which quotation is to be accepted. As a general rule the lowest quotation is accepted, as appears from the test examiination which we made of the quotation letters.

We note that in the purchase of Stationery Supplies the Purchasing Agent is assisted by the Superintendent of Stores and that the latter interviews dealers and issues orders. The practice of permitting the Superintendent of Stores, who is responsible for the custody and issue of stores, to take part in their purchase is to be condemned. The creation of the office of Purchasing Agent was presumably intended largely as a check upon the Superintendent of Stores, who in turn acts as a check upon the former. To combine, even to a limited extent, the duties of the two offices is in effect to render the check entirely ineffective.

(*b*) *Superintendent of Printing*:

This office is at present held by Mr. F. Boardman. Formerly the Superintendent of Printing purchased all supplies required for the Printing Department, but this is now done by the Purchasing Agent and the duties of the Superintendent, so far as purchasing goes, are confined to the placing of orders for outside lithographic and printing work.

In the case of lithographing work, quotations, and sometimes tenders are called for; these, however, are not received by registered mail. In the case of outside printing, a fixed schedule of rates drawn up by the Department is in force and the work is given out without advertisement or tender.

In our opinion the Superintendent of Printing should not be permitted to place orders with outside firms without some check, and we would suggest that all his requisitions for such work should be made to, and passed by, the Purchasing Agent as to price and other general conditions.

All supplies are purchased on requisition of the Superintendent of Stores or the Superintendent of Printing. Orders given by the Purchasing Agent are made out in triplicate, the first copy going to the dealer, the second being retained on file by the Purchasing Agent after approval by the King's Printer, and the third copy being filed in the office of the Superintendent of Stores.

The unfilled orders are kept on a special file arranged according to dealers. When we examined the files towards the middle of May about 500 orders were apparently open, but it was found that a number of these had already been filled and that the orders had not been removed from the files. Greater care should be given to keeping the files up to date, and we think that information in regard to unfilled orders would more readily be obtained if contract orders were kept on a separate file, and if orders remaining unfilled for an unusual length of time were transferred to a special inquiry file.

STATIONERY STORES AND DISTRIBUTION.

The law constituting this division of the Public Printing and Stationery Office is set forth in the Revised Statutes 1906, Sections 21-29, which provide for the appointment of a Superintendent of Stationery.

The work of the division is at present in charge of Mr. J. O. Patenaude, who was appointed by Order in Council, and who has the title of Superintendent of Stores and Distribution.

We append hereto Exhibit 3, a comparative statement of the expenditures of this division for the past five years.

The following statement of stocks and issues will give an idea of the volume of the transactions of the department:—

March 31st		Stocks carried.	Issues.		Total.
			To Departments.	To Printing Bureau.	
		$ cts.	$ cts.	$ cts.	$ cts.
1908	Issue price..	201,568 09	363,534 02	216,493 73	580,027 75
1909	" ..	243,258 43	388,008 22	225,508 23	613,516 45
1910	" ..	256,697,41	390,459 93	222,442,62	612,902 55
1911	Cost price..	194,690 66	362,171 85	258 877 63	621,049 48
1912	" ..	174,423 29	452,905 49	321,586 91	774,492 40

RECEIPT OF SUPPLIES AND APPROVAL OF INVOICES

All supplies received are inspected by the Superintendent of Stores, and in the case of paper special tests of both samples and deliveries are made by an assistant.

Paper undergoes a mechanical test for strength and a chemical test for the purpose of ascertaining whether ground wood, which causes deterioration, has been used in its manufacture.

The invoices covering purchases are handed to the 'checker' or receiving clerk, who is responsible to the Superintendent of Stores, and are certified as to the receipt of the goods by two individuals. The Purchasing Agent then verifies the prices on the invoices by two assistants, who certify that the prices charged are correct and that they are fair and just. The invoice is also stamped by the Purchasing Agent and Superintendent of Stores as to the date the invoice was received in the respective Departments.

One copy of the invoice is retained by the Superintendent of Stores so that the Stock Register may be written up therefrom. The Purchasing Agent also retains a copy and two copies are forwarded to the Accountant, whose department certifies as to the correctness of the extensions and additions.

The invoice is retained in the Accountant's Department until the end of the month, when particulars are entered in a register or purchase day-book and also on to a "backing" or "voucher" for payment, and the total of the "backing" is posted to the credit of the merchant in a purchase ledger. At the end of the month the backing, with the invoices attached, is forwarded to the Auditor General after being stamped "paid" and the number of the cheque noted.

STOCK RECORDS.

A stock register is kept, part of it being represented by loose leaf records and part, containing miscellaneous supplies, by card records. Little practical use, however, appears to be made of these records, as will be apparent from a consideration of the following points:—

(*a*) The Stock Ledger is not kept up to date.

(*b*) The Ledger is not added up until the end of the year.

(*c*) The balances as shown by the Stock Ledger are not compared with the quantities as shown in the physical inventory until a considerable time after the

close of the year and then little attention appears to be given to the averages and shortages. It is claimed that they about offset but the results should be most carefully looked into.

(*d*) No balances are taken at any time during the year.

(*e*) From a comparison of the book with the physical quantities on hand at the end of March 1911, it is evident that either there are numerous errors in posting or the physical inventory at that date was incorrect.

If the expense of maintaining a Stock Register is incurred, this Register should be kept up to date and with reasonable accuracy so that the Superintendent of Stores would be in a position to furnish the Purchasing Agent with the Stock on hand of any article at any given date as well as the consumption. It is obvious that unless the balances as shown by the Stock Register are frequently compared with the physical quantities on hand, no explanation of the shrinkage in the stock can be given at the end of the year and there is no means of detecting leakages or mistakes in weight or quantities delivered.

Inventories of Supplies on hand are taken at the end of the fiscal year, the Department being closed, so far as regards issues of Stock, for about ten days. The work of counting and listing supplies is performed by the Stationery Office employees under the supervision of three clerks from the staff of the Auditor General. The prices are entered by one of the clerks of the Stationery Office from his price register and checked by a representative of the Auditor General. The extensions are made in the Stationery Office and checked by the staff of the Auditor General.

The inventory at March 31, 1912, has been valued at cost. It would appear, however, that it includes a number of articles which have been on hand for some considerable time and which are not now worth the amount originally paid for them; as for example, large purchases of typewriter ribbons and carbons were made some years ago and, as the styles of machines have changed in the meantime, it is not possible to use this stock. The Superintendent of Stores has estimated that stock which is more or less obsolete is included in the inventory of March 31, 1912, at values aggregating at least $18,982.68.

We would emphasize the importance of standardizing the supplies which can, however, only properly be done by the co-operation of the various Government Departments. Grades should be established, and, in the catalogue of stock which is furnished to the Departments, grades only should be referred to.

In this connection we would mention that in the course of our work we have noticed that the forms used for identical purposes differ in design, quality of paper, form of type, etc., not only in this but in other departments. We would recommend that steps be taken to standardize these forms. For instance, all cheques, pay sheets, invoices and vouchers should be uniform in style and size. There can be no doubt economies could be effected in this way, especially if the Printing and Stationery Offices had the co-operation of all the Departments.

At the present time no controlling account is carried on the General Ledger to show the value of the Supplies on hand. We would suggest that the Supplies should be divided into a number of classes and that each class should be controlled by an account in the General Ledger, or on a ledger subsidiary thereto kept in the Accountant's Department. The Stock Records would be kept in the Stationery Department as at present in quantities only, but each account should be periodically checked up by physical inventory. At the end of each quarter or half year the quantities shown on stock records should be priced and their value extended and grouped according to the classes controlled by the General Ledger. This would enable the Accountant to keep a strict check over the correctness of the store records, as the value of each class of Supplies should approximately agree with the balance on the ledger account carried by him. This system would also obviate the necessity of closing the department at the

end of the fiscal year for stock taking purposes, as physical inventories of the various supplies would be taken throughout the year when the stocks were lowest or at such times as were most convenient.

Issues of Supplies.

Issues from stores are made according to the requisitions from the Departments. These requisitions are copied into the Entry Sales Book and the issues of the various articles are posted daily from that book to stock issue sheets. These sheets are totalled weekly and the total posted to the credit of the Stock Ledger accounts.

We are informed that considerable delays occur in posting the total weekly issues to the credit of the Stock Ledger. The reason given is that goods are constantly being returned and the present practice is to alter the original entry in respect of returns before posting. We would consider it better to issue credit notes for returns as is usually done in the case of private corporations.

We notice that the method of requisitioning varies according to the Departments. Some make frequent requisitions for small quantities and others appear to requisition to supply stock, which they evidently carry in their own departments. In this connection it would be desirable to ascertain precisely what methods are employed in the various departments with regard to stationery, more particularly in estimating requirements. It would appear that under Section 35 of the Stationery Act the Minister may require the departments to submit detailed estimates of the quantities, varieties, qualities and values of both the printing and stationery required. Such estimates, if properly used, would undoubtedly be of material assistance to the Superintendent of Stationery in ordering supplies for stock.

Requisitions for the issue of supplies are received in duplicate, the original being retained on file and the duplicate being returned with the goods. The department receiving the goods is supposed to return the duplicate requisition, stamped as to the receipt of the supplies, but this practice does not appear to be always carried out.

At the end of each month the original requisition is priced and extended and is checked with the Sales Entry Book (or Shipment Book) and attached to a "backing", which is sent to the Auditor General as evidence of having supplied the goods to the departments. Where the requisition is not completely filled, a transfer slip is made out in duplicate and the missing items on the requisition marked "later on" or "ordered". When these delayed items are filled the transfer is attached to the backing and forwarded to the Auditor General as evidence of delivery.

The present system in regard to the requisition and issue of goods could be improved upon, but without a knowledge of the systems in force in the various departments of the Government and the individual requirements of each, and of the Auditor General, it is not possible to come to a conclusion as to the best method to be adopted.

Distribution of Stationery Department Expense.

In order to cover the expense of operating the Stationery Office arbitrary percentages are added to the cost value of the stationery sold to the departments from stock (the percentages being added to supplies which do not pass through the stock), which are as follows:—

Blue Book paper	20%	on cost value.
Tender paper	15%	"
Ledger paper	10%	"
Sundry small stock	5%	"

These rates have not been changed for some years; they were originally fixed by the Superintendent of Stationery, as being sufficient to absorb the proportion of the expenses of the Stationery Office which are actually charged.

Under the present system it is not possible to say definitely whether the percentages added to the cost of goods issued in the aggregate fairly represent the total expense of the Stationery Department.

The danger in present methods is that under certain conditions too large percentages might be added for the purpose of covering up shortages or shrinkages in the stock. We think that it is desirable to instal some system whereby the total amount of overhead added during the year could be ascertained and compared with the total expenses of the Stationery Department.

The question as to whether the percentages added to the different classes of stock are *inter se* fair and equitable is a matter which should be carefully considered from a practical operating standpoint.

The percentages added to the cost of goods issued do not include any provision for the proportion of the following indirect or overhead expenses:—

(*a*) Accounting Division.
(*b*) General cost of administration, such as King's Printer's salary, etc.
(*c*) Rent, telephone, furniture, etc.
(*d*) Part of the cost of cleaning.
(*e*) Depreciation of equipment and provision for renewals.

PRINTING.

The Superintendent of Printing, Mr. F. Boardman, exercises a general supervision of the operation of the department, and has control and direction of the accounts relating to cost, in addition to placing orders for outside work already noted herein under the head of Purchasing. We append (Exhibit 3) a comparative statement of the expenditures of the past five years for the Printing Bureau.

We are submitting a statement of the value of the work placed outside during the past five years (Exhibit 4), but it is not practicable to make a separation between printing work and lithographic work. Broadly speaking, the printing work given out is said to be about fifty per cent of the entire outside work.

We find that the ratio between the value of the printing and lithographic work done outside and inside the Printing Bureau is as follows:—

	Total.	Work in Printing Bureau.	% of Total.	Outside.	% of Total.
	$ cts.	$ cts.		$ cts.	
1907-08	880,252 28	639,248 75	72	241,003 53	28
1908-09	987,814 94	677,250 08	69	310,564,86	31
1909-10	988,929 58	688,316 32	70	300,613 26	30
1910-11	1,130,610 56	870,940 18	77	259,670 38	23
1911-12	1,165,455 03	873,235 92	75	292,219 11	25

A comparison of the value of work in progress at the beginning and end of the fiscal year ending March 31, 1912, may perhaps be of interest, and we therefore submit a statement herewith (Exhibit 7). We would direct attention to the fact that the inventory is not checked in any way by the Auditor General's Department as in the case of the Stationery stock.

It would appear that no proper sorting of type has been done for some years, and we are informed that a considerable quantity of old type is still in use. We would suggest that inventory records of the standing type be kept by the Controller of Composition and submitted periodically to the Superintendent of Printing.

COST SYSTEM.

As a result of the investigation made about a year and a half ago the present cost system was installed.

The system adopted and now in force is designed on the lines of the standard system adopted by the American Printers' Cost Commission in 1910. The system is fully described in a pamphlet issued by the Montreal Printers' Board of Trade, but for your information we outline below the principles upon which the cost is determined.

The elements entering into the cost of each piece of work are:—

Direct—

1. The cost of material used.
2. The cost of work done on the job outside.
3. The cost of the labour engaged directly on the job.

Indirect—

4. The proportion of the cost of the labour and shop burden in each process which is not chargeable to any particular job.
5. The proportion of the general burden or overhead expense.

The first three items of cost are known factors and are charged directly to the job.

The remaining items have necessarily to be distributed to each job on some common basis. The unit adopted is the 'chargeable' or 'productive' hour worked in each process or shop through which the job passes during the course of manufacture, excepting that in the case of monotype casters and presses the machine hour is used.

Each workman is required to fill in a time ticket showing the hours worked which are chargeable directly to jobs and the hours which are not chargeable to jobs. The chargeable hours are posted daily to the debit of the job, on a job record sheet, and the total chargeable and non-chargeable hours are compiled each day, according to the various processes.

It follows that when a job is completed the total hours spent in each process of manufacture will be shown on the individual job record sheet or cost ledger. Each month the cost of each process is ascertained; this includes the total labour expended and the proportion of the overhead expense or burden, the latter being distributed, over the various processes, as will be shown later, on the basis of the direct labour and expense.

The total chargeable hours of each process are then divided into the cost of the process and the result is the cost per chargeable hour for the process. This cost per hour is used in pricing the hours, which have already been entered on the job record sheet, thus giving the labour cost of the job in each process.

The material cost is entered from a requisition slip, details of which are entered by the Stationery Office, which supplies the material as requisitioned, and if there is any cost for outside work, say for half-tones, it is posted direct from the invoice to the job record sheet. The total cost of the job is thus completed, and the Accountant charges the Department for which the work has been done.

Having shown in a general way how the cost is arrived at, it will be as well to consider the question of overhead burden.

As already pointed out overhead burden is divided into two groups, viz., the labour cost of each process which is not directly chargeable to a job and the general expense, which is not charged to any process.

Under the system recently installed, the number of non-chargeable hours is ascertained and although the figures are not obtainable for a complete year, those for 34 weeks compare as follows:—

	Chargeable Hours.	Non-Chargeable Hours.	% of Total.
Hand Composition	204,677	47,208	18
Linotype	84,424	5,463	6
Monotype keyboard	15,379	820	5
Monotype casters	9,339	4,772	34
Stereotype Foundry	7,114	432	5·7
Bindery "A"	98,265	2,585	2·5
Bindery "B"	42,042	296	·07
Bindery "C"	163,487	1,691	1
Map Engraving	5,581	404	6
Press Room	53,767	2,977	7

In order to maintain a better check on the work of the press room, the hours are further subdivided as "make ready" and "running time" of each press. In the case of the linotype and monotype machines the chargeable and non-chargeable machine hours are recorded, and further, the output of each monotype keyboard in "ems" is prepared. Such statistical information will be of great value in enabling the management to follow in the future the efficiency of the various operations.

The proportion of overhead which may be described as general expense is made up as follows:—

(*a*) The salaries of the Superintendent of Printing and his office staff (excepting Civil Servants).
(*b*) 90% of the wages of the mechanical staff.
(*c*) 50% of the carters, shippers and messengers.
(*d*) 90% of the cleaning expense, except that which is provided out of the Contingencies Vote.
(*e*) Stationery, Postage, if any, and sundry expenses.
(*f*) Spoiled work.
(*g*) Engine room oil, waste, etc.

This overhead is apportioned to the various processes on the basis of the direct expense, and it amounts to about 15% at present. Whilst the items which are of a general character should be so divided, it would appear that the charge for the mechanics' wages should more properly be distributed to those processes where machines are used.

The overhead charges added to the printing work are not complete, however, in that several items of expense are not included. These are as follows:—

(*a*) Salaries paid to Civil Servants, including proportion of the accounting and administrative staff.
(*b*) Expenses defrayed by Public Works Department, including heat, light, power and telephone.
(*c*) Part of the cost of cleaning.
(*d*) Depreciation and renewals of buildings, plant and equipment, and interest on money invested by the Government in the land, buildings and plant.
(*e*) Insurance.
(*f*) Proportion of expense of the Auditor General's Office and Post Office Department.

We submit (Exhibit 8) a comparative statement of the cost per hour for each process showing the rates formerly in use and those which have been used in the past year. It will be seen that the rates per hour have been changed and that they have, in some instances, been considerably increased. It would appear that the rates were

first revised on April 1, 1911, and further revised on August 17, 1911, and again revised March 1, 1912, the tendency being to increase the rates on each revision. From calculations we have made it would appear that the rates charged in the past year have been too low, and it is also open to question whether the present rates are not still too low.

We are informed that under the old cost system the time worked on each job was largely a matter of estimate, if not guess work, and the method of adding a percentage to cover overhead was a purely arbitrary one.

In order to illustrate the present method of obtaining the costs we give below a table of some of the process costs for the two weeks ending April 24, 1912, showing the various ratio of each to the total per hour cost of the process.

STATEMENT SHOWING ELEMENTS ENTERING INTO COSTS OF COMPOSITION APRIL 24, 1912.

	Hand.		Linotype.		Monotype Key-board.		Monotype Caster.	
	Cents per chargeable hour	Percentage of Cost	Cents per chargeable hour	Percentage of Cost	Cents per chargeable hour	Percentage of Cost	Cents per chargeable hour Machine Hour	Percentage of Cost
Time charged direct to jobs	36·51	59·42	40·50	43·34	50·28	36·82	22·24	43·84
Shop Burden:—								
Non-chargeable time	8·04	13·08	2·71	2·90	·88	·64	8·97	17·68
Foremen and machinists	2·46	4·00	11·50	12·30	15·18	11·12	8·42	16·61
Machine men transferred to hand composition at machine rates—Difference between machine and hand rates	1,35	2·20						
Total Shop Burden	11·85	19·28	14·21	15·20	16·06	11·76	17·39	34·29
Total composing cost	48·36	78·70	54·71	58·54	66·34	48·58	39·63	78·13
Proofreading	4·40	7·16	23·12	24·74	48·44	35·47		
Sundry	·05	·10	2·47	2·64	2·62	1·92	3·97	7·83
General Overhead expense	8·63	14·04	13·16	14·08	19·17	14·03	7·12	14·04
Total cost per chargeable Hour	61·44	100·00	93·46	100·00	136·57	100·00	50·72	100·00
Rates actually charged (per hour)	65 cts.		$ 1.00		90 cts.		90 cts.	

The cost system has only been in operation a short time and it is hardly fair at the present time to offer any criticism on the rates used in the past year. We consider the fact that so much statistical information is available reflects credit on the new management.

The costs are compiled every two weeks, but as the labour and material charges are only supplied by the Accountant monthly, apportionments have to be made between months. It would appear that the cost records agree substantially with the charges made by the Accountant against the Printing Department.

A manufacturing account is kept by the Accountant, but there is no corresponding account in the Cost Department, and there is no systematic attempt to agree the charges in the manufacturing account with the charges made to individual jobs.

This should be done in order to prove that the hours charged to the jobs agree with the hours actually paid for, and the materials charged on the job sheets should be tested, if not actually agreed with the total charged to the controlling account on the general ledger.

In the course of our inquiry several suggestions for improving the cost records were brought to our notice which should be carefully considered. The more important of them are as follows:—

The practice of recording particulars of each requisition in a register has been discontinued, and the register is replaced by a card which is ultimately filed away with the job bag. It is claimed that delays in answering inquiries are occasioned by this change and further, that the work of compiling some of the tables required for the annual report is much increased and results in delay.

It is stated that errors occur in posting the hours from the time-ticket to the job record sheets by reason of the fact that mistakes occur in entering the number of the job, as the time-tickets do not contain sufficient information to ensure correct posting. This could probably be remedied by a revision of the form of time-ticket.

The method of filing job bags is unsatisfactory and could be improved, and the filing accommodation is inadequate.

The form of job-record-sheet at present in use is unnecessarily cumbersome and could be improved with advantage.

Generally speaking, we are of the opinion that the cost system, if properly carried out, should give reliable results and form a correct basis for the Departmental charge. From the information we can obtain it would appear that the present system is greatly superior to that superseded, but, as has already been pointed out, the cost of work performed does not include all overhead expense properly chargeable thereto.

In our opinion it is desirable that the true cost of service be shown, as unless this is done any comparison between the cost of work performed by the Department and the cost at which the same work could be executed outside is impossible. In making any such comparison the following considerations must be borne in mind:—

1. That no profit is added to the cost of the work.
2. That a large quantity of the work is confidential in character and requires special supervision on this account.
3. That 'rush' conditions which disturb the routine prevail at certain seasons.
4. The delays caused by Departments issuing orders to hold presses for copy, the time for which is not charged to the job.
5. The large proportion of paid holiday time.
6. No charge is made for type kept standing.

ACCOUNTING.

Under the terms of the Public Printing and Stationery Act, R.S., Chap. 80, Sec. 30, the Accountant is authorized to carry out the following duties, under the direction of the Minister and the King's Printer:—

(*a*) Audit all accounts for any of the services under the control of the Department.
(*b*) Keep accounts of the Department.
(*c*) Receive and deposit all cash paid in.
(*d*) Render statements of accounts to the Clerks of the Houses of Parliament and Deputy Heads of the several Departments.

At the present time the position is filled by Mr. J. A. Frigon, who is assisted by a head bookkeeper, Mr. F. G. Bronskill.

It would appear from the Act that it was the intention that the Accountant should fill the position of auditor of all accounts of the establishment, be responsible

for all the bookkeeping, carry out the duties of receiving cashier, and also act as paying cashier and paymaster. At the present time, however, the duties and authority of the Accountant are limited in scope, and it is open to question whether the provisions of the Act are being strictly complied with.

CASH RECEIPTS AND DISBURSEMENTS.

Under the present system of organization the Accountant collects and disburses cash and has charge of the records thereof. We would strongly recommend the appointment of a cashier to relieve the Accountant of all duties connected with the receiving and disbursing of cash, as the present plan of organization is in our opinion unsound in this respect.

Under Sec. 42, Chap. 80, of the Revised Statutes, it is provided that the Minister of Finance may from time to time authorize the advance out of the Consolidated Revenue Fund of Canada of such sum, not exceeding at any time $200,000, as the King's Printer requires, to enable him to purchase material, or for payment of wages before orders are completed and paid for.

When the Accountant requires money he makes out a requisition on the Auditor General for the amount required, usually $100,000 at one time, and in the case of sterling exchange he requisitions separately. With regard to foreign exchange fixed rates are used, any profit or loss resulting being taken up by the Finance Department.

The following information in regard to the handling of cash may perhaps be of interest to you:—

All payments are made by cheque, excepting in the case of a few petty disbursements, which are made through a Petty Cash Fund. The expenditures are not paid out of the cash receipts of the Department, but funds are provided chiefly by means of letters of credit and also by means of appropriations.

Three different forms of cheques are used, viz.:

(*a*) Expenses cheques,

(*b*) Wages cheques,

(*c*) Civil List cheques.

Expense cheques are signed by the King's Printer or Superintendent of Printing and countersigned by the Accountant or Chief Bookkeeper.

Wages cheques are signed by the Chief Bookkeeper and countersigned by a clerk representing the King's Printer.

Cheques for payment of Civil List salaries are signed by the King's Printer only.

All cheques, excepting those on the Civil List and on foreign accounts, are paid out of the letters of credit. At the end of each month a detailed list certified by the Accountant and King's Printer is sent to the Auditor General, this being made up from the expenditure cash book; and in addition a recapitulation of all the cash transactions is also forwarded monthly.

The balance on the Accountant's cash book at any given date represents the difference between the letters of credit authorized and the cheques drawn, and at the end of the fiscal year any such balance is paid over to the credit of the Receiver General. As a matter of fact the cash book is held open until some weeks after the close of the fiscal year, this period varying from year to year, according to an Order in Council made under Sec. 50, Chap. 24, R.S.

The Accountant does not make any reconciliation between his cash book and the bank account as to outstanding cheques and the paid cheques returned by the bank are not examined by him. We understand that this work is carried out in the Finance Department, but we do not know how frequently reconciliations are made and how the method of check is carried out.

GENERAL DUTIES OF ACCOUNTANT.

An analysis of expenditure is made according to appropriations and is also classified as between expenditures of the Printing Bureau and Stationery Office, but no adequate sub-division of the two latter accounts is made.

In addition to the expenditure distribution records the Accountant keeps an analysis of the pay roll, so far as it relates to the Printing Bureau, and this, together with a statement of miscellaneous charges, is handed to the representative of the Superintendent of Printing monthly. From this information the fortnightly summarized cost sheets are prepared.

The Accountant checks all invoices for goods purchased by the Stationery Department, but he does not check invoices for "outside work", this being done under the direction of the Superintendent of Printing. All purchase invoices should be handled by the Accountant's Department.

As already mentioned no controlling accounts for Supplies, etc., are now carried in the general ledger, which would enable the Accountant to furnish the King's Printer with the amount of stock on hand each month, and no attempt has hitherto been made to ascertain the amount of shrinkage in the stationery stock account. The purchase and sundry sales ledgers should also be controlled from the general ledger.

Such statistics as are kept are prepared by the various heads of Departments, and apparently the work of preparing the totals required for the annual report is left until the end of the year with the result that unnecessary delay occurs in getting out the annual statements. For instance, the annual report for the year ended March 31, 1911, was not published until January 26, 1912.

As has been pointed out the Superintendent of Stores has his own accounting staff, which is entirely independent of the Accountant, and the same remarks apply to the Superintendent of Printing, who is entirely responsible for the costing and manufacturing records, the Accountant accepting no responsibility therefor.

In our opinion the Accountant should have more scope and have complete control of all Accounting and Cost records of the Department, and he should be freed from all detail work, so that he may be in a position to personally see that the accounting work is being effectively and expeditiously carried out throughout the organization. He should furnish the King's Printer and Department Superintendents with monthly and periodical reports and be in a position to explain increases or decreases.

PAY ROLL.

Salaries and wages may be divided into two sections, the Civil List and the Temporary List.

Appointments to the Civil List are made either by examination or from the Temporary List without examination, under Sec. 37 of the Civil Service Act, Chap. 16, or by Order in Council. Dismissals from the Civil List are made by Order in Council.

With regard to the appointment of temporary employees, this is governed by Secs. 17 and 27 of the Public Printing and Stationery Act, Chap. 80. Employees are appointed to the Printing Establishment by the Superintendent of Printing with the approval of the King's Printer, and in the case of the Stationery Office by the Superintendent of Stationery with the approval of the Secretary of State. We are informed, however, as a matter of fact, that all appointments are made by the King's Printer.

The employees on the Civil List are paid out of the Civil Government appropriation and the remainder of the employees are paid from letters of credit provided by the Receiver General out of the Consolidated Revenue Fund of Canada (Sec. 42, Chap. 80).

At May 22, 1912, there were 875 employees, an approximate classification of which is as follows:—

	Total	Civil List Males	Temporary List	
			Males	Females
Administrative and Accounting	21	18	3	
Printing Bureau:—				
Administrative and Accounting	24	8	16	
Manufacture	685	.....	508	177
Stationery Office:—				
Administrative, Purchasing and Accounting	45	18	27	
Packing and shipping	21	9	12	
General utility	79	.....	38	41
Total	875	53	604	218

During the fiscal year ended March 31, 1912, the salaries and wages paid were as follows:—

Civil List	$ 64,712 41
Contingencies	2,634 97
Temporary List	578,525 14
Total	$645,872 52

We append hereto schedules setting forth the number of employees in each division of the work, with particulars as to the rates of wages paid (Exhibits 5 and 6).

We are informed that there is no record of the ages of the employees, excepting those on the Civil List, and further that there is no age limit either for engaging or superannuation of these employees. In our opinion a statement should be prepared each year showing the number of employees between 20 and 30, 30 and 40, and so forth. It would also be desirable to report the number of employees and the total wages paid in each division of the Department, so that those responsible for its efficiency may know how the staff has been increased or decreased.

Upon entering the service, temporary employees are required to fill in a card giving name, address, date of appointment and division in which employed. This information is registered in an employees' address book, which appears to be the only permanent record on file. Each employee is given a number by the timekeeper, which is used as a means of identification during the term of his employment. In the case of Civil Servants an efficiency record is kept by the Accountant as required by Sec. 40, 7-8 Edward VII., Chap. 15.

A record is kept of all misconduct reported by the foremen. The King's Printer imposes penalties where necessary, which usually take the form of suspension, the duration of which is determined by the gravity of the offence.

The office staff is required to work 36½ hours a week and the regular force 48 hours a week, the hours being as follows:—

	Morning		Afternoon	
	In	Out	In	Out
Clerks and Proofreaders	9	12	1.30	5.00
Others	8	12	1.00	5.30

All overtime is stated to be authorized by the King's Printer.

We are informed that the Civil Servants are allowed 15 minutes grace within which to register in the morning, and in the summer months, June 1st-September 1st, they are permitted to leave at 4 p.m. (by Order in Council, May 4, 1910). Clerks and some other assistants on the temporary list are also permitted to avail themselves of this latter privilege.

Employees on the Civil List are allowed three weeks' vacation in each year and the temporary staff two weeks' leave with pay. This vacation is in addition to the statutory holidays to which all employees are entitled. A record book is kept showing the holidays and the number of days each employee is absent by reason of sickness or otherwise.

Under the present regulations of the King's Printer all employees are required to ring in on the time clock on entering and leaving the Bureau. Under Sec. 105 of the Civil Service Act, Civil Servants are required to sign an attendance book, which has been replaced by the time clock.

There are fourteen time clocks located in the different divisions of the Department, and it is the duty of the foremen or their assistants to see that each employee rings up his proper number. The time clock slips are taken off daily by the timekeeper and his assistant and the hours worked posted to the credit of the employee on a time sheet. At the end of the pay period the total hours worked by each employee are extended and transferred to a pay sheet. The pay sheet is completed by the timekeeper, who is under the direction of the Accountant, and then handed by him to the Paymaster, who fills the position of Assistant Accountant.

The Paymaster checks the clerical accuracy of the pay sheet. The pay cheques are then made out and are signed by a clerk, Mr. Ardouin, for the King's Printer, and by Mr. Bronskill, the Paymaster, for the Accountant, both of the persons signing being under the direction of the Accountant. The cheques are then distributed by the Paymaster without any witness.

After the wages are paid, the pay sheets are forwarded to the Auditor General, who checks and certifies them. Only one copy of the pay list is made and this is retained in the Auditor General's Office. The paid pay list cheques are returned by the bank direct to the Finance Department and are not examined by the Accountant.

We would submit for your consideration the following recommendations covering the more important points in connection with the pay-roll system and methods:—

(1) Sufficient importance is not given to the matter of registering employees when first engaged, or of keeping records of the efficiency of the individual service.

(2) A confidential record should be kept by the King's Printer, in which should be entered the usual particulars as to term of service, address, age, etc., and this record should also contain information as to efficiency and general conduct of each employee.

(3) As a check on the accuracy of the daily time recorded on the time list, we would recommend that the individual time sheets of each employee, which are certified by the foremen, be compared with the totals as shown on the time sheet.

(4) At the present time there is no check on the work performed by the timekeeper; and there is no proper system of internal check, as both the timekeeper and paymaster report to the Accountant.

The timekeeper should be under the direction of the Accountant as at present, and should certify as to the correctness of the time and rates. The Accountant should verify and certify to the clerical correctness of the rolls.

The Paymaster should have nothing to do with the preparation of the pay roll but should be responsible for its due payment, to the cashier, who we have suggested should be appointed to handle cash receipts and disbursements.

(5) The present method of paying wages can be improved upon. The cheques should be drawn by the Paymaster as at present, and countersigned by the cashier. The payment by cheque to the employees should be made in the presence of a witness,

who should certify to the payment of the amount entered in the pay roll against each individual.

(6) No proper certification of the pay-rolls has been made in recent years and we would recommend in this connection that all pay lists should be made in duplicate, one copy being forwarded to the Auditor General and the second copy remaining on file in the office. These lists should be certified by each person responsible and a description of the work done by each signatory should be made on the roll in spaces provided by rubber stamp.

(7) To facilitate checking the time sheets, the pay sheets should be made out by departments, and the total amount of pay-roll for each department clearly shown on the roll, these totals should be carried forward to a grand total, which would agree with the total amount of checks for the pay period. We would suggest for consideration the advisability of using the time list for the pay list and so avoiding duplication of work.

We have been informed by the officers in the Bureau that so far as they are aware the Auditor General's staff only check the clerical accuracy, but there is nothing to show on the face of the list what is the extent of the audit made.

(8) Generally speaking we find that the lists are not well kept, there being numerous alterations and erasures.

SUBSIDIARY DIVISIONS OF THE DEPARTMENT.

In addition to the work carried out in the Printing and Stationery divisions of the Department with which we have already dealt, the duties of the King's Printer include a supervision of the following subsidiary offices, viz.:—

Distribution Office of Government Publications.
Audit Office for Intercolonial Railway Printing.
Advertising Audit Office.
Office for the Revision of Voters Lists.

For your information we would deal briefly with the work carried out in each of these divisions:—

DISTRIBUTION OFFICE OF GOVERNMENT PUBLICATIONS.

This division of the work is in charge of a chief distributor, Mr. N. LaRochelle, who reports to the Superintendent of Stores.

The chief distributor is assisted by seven employees, who are permanently attached to this division and two temporary assistants loaned by the Bindery.

We submit a statement (Exhibit 9) showing the publications issued during the four years ending March 31, 1911, the corresponding figures for 1911-12 not yet being available.

As other Government Departments also issue copies of the same publications which are sent out from this office, it would be well to periodically compare the mailing lists in order to avoid duplication. We would also suggest that unused copies of official publications be returned to the King's Printer each year and a record kept of those destroyed.

It is intended that the stock of publications on hand should be kept in the basement, but owing to lack of space the greater part is stored on the sixth floor. It is stated that the first physical inventory was taken in August 1910 and stock books were opened with the balances on hand at that date. No inventory has since been taken and the stock books are considerably in arrear at the present time.

AUDIT OFFICE FOR INTERCOLONIAL RAILWAY PRINTING.

For the purpose of maintaining a check on the cost of printing for the International Railway the verification of the King's Printer or his representative is required on all bills paid.

This audit work is in charge of Mr. F. J. Farrell who receives copies of the bills rendered to the Intercolonial Railway together with a description of the work and samples of the paper. He passes upon the charges made for the work and in this respect he is guided by a schedule of prices, which we are informed was fixed in 1908 by the King's Printer.

ADVERTISING AUDIT OFFICE.

This division of the work is in charge of Mr. L. A. Grison, whose official title is Auditor of Advertising, and he is assisted by Mr. V. Braceland, clerk, and by a temporary assistant.

The duties of this division are (*a*) to place contracts for the advertising required by all Government Departments with newspapers and magazines and determine the rates to be paid; (*b*) to requisition the Printing Bureau to print copies of the advertisements as required; (*c*) to receive the bills for advertising and audit them before they are passed to the various departments for payment.

Particulars as to the work done for the various Departments by Provinces will be found in the annual reports of the Printing Bureau, Table F.

OFFICE FOR THE REVISION OF VOTERS' LISTS.

This division of the King's Printer's work is carried on under the provisions of The Dominion elections Act, 1908, Revised Statutes, Chap. 6, Secs. 15, 16, 17 and 18.

The work is in charge of Mr. H. T. Smith, his duties being to see that the lists are printed in accordance with the copies received from the clerk of the Crown in Chancery. Blank ballot papers are distributed from this office as required.

The entire time of the clerk in charge does not at present appear to be employed, and we would suggest for consideration the advisability of merging the work of this division with that of some other division or of carrying out the work at the office of the Clerk of the Crown in Chancery.

OPERATING CONDITIONS.

Under this head it may be well to bring to your attention some of the conditions which prevent the Department from being operated as economically as if it were in the hands of a private corporation. Some of the considerations put forward have, we are aware, been frequently discussed, but we believe that opinions formed after a detailed study of the Department may be of interest to your Commission.

In the first place the direction of the work of the Department is in the hands of the King's Printer, who acts under the instructions of the Secretary of State, and, whilst he is given some discretion this is necessarily limited by Acts of Parliament and Orders in Council, and he has not the power to introduce improvements or effect economies which would be held by the managing director or executive board of commercial undertakings. We might mention in this connection that the machines in the press room are claimed to be inefficient, and the frequent delays which occur in the bindery are attributed to the want of modern machinery. Further, it does not appear that the press room is sufficiently well equipped to take care of the composing rooms, and the situation is also aggravated by the reason that the bindery is unable to take care of the press room.

Another serious handicap under which the Department is working from a commercial standpoint, is that of political influences, and this brings us to a considera-

tion of the present staff arrangements. The insinuation has been constantly made to us that those in charge of the operations are not able to employ such help as they would wish, but are virtually obliged to accept such persons as are recommended, regardless of their age or qualifications. The service is also undoubtedly handicapped by reason of the sentiment which surrounds the retention of the older employees, there being no pension or superannuation allowance for employees other than Civil Servants.

In a well administered commercial concern promotion is usually attained by merit alone, without consideration of other influences, and the different departments of the business are entrusted to men thoroughly familiar with the routine work, who are given a free hand in the selection, promotion and retention of their subordinates. The employment and retention of persons who are incompetent cannot but be detrimental to the efficiency of the Department as a whole.

Another question which requires careful consideration is that of the employment in the Department of both Civil Servants and others who are not on the Civil List. Civil Servants have greater privileges in respect of holidays and attendance, and on this account a considerable amount of dissatisfaction appears to have been created. One advantage which would be gained by operating the Department with Civil Servants only would be the removal of political influences in regard to the appointment of employees. On the other hand it is questionable whether the same standard of experience and efficiency could be expected from those on the Civil List as compared with those who might be obtained from outside manufacturing establishments. As a greater part of the work carried out in the Department is of a highly technical nature, this is an important consideration. A solution of the problem might possibly be obtained by filling the purely clerical positions with Civil Servants only, while the operating divisions could be carried on by both classes of employees, provided all were accorded equal privileges. As those on the Temporary List are not entitled to pensions, it might be well to consider the advisability of establishing a separate fund for their benefit.

ANNUAL STATEMENTS OF ACCOUNTS.

The annual report of the King's Printer is supplemented by reports from the Accountant and the Superintendents of Printing and Stationery. These contain much valuable information in considerable detail and illustrate the rapid growth of the various services rendered to the Departments. It does not appear, however, that the annual accounts of the Department are drawn up in a sufficiently clear and intelligible form. In connection with this subject the first point for consideration is, we think, whether the main account of the operations of the year should be based on the actual receipts and disbursements, or whether it should be based upon the income attributable to the year, whether received or not, and the expenditures incurred regardless of the date of the actual payment. The latter basis is of course the one generally adopted in commercial usage, but there is considerable difference of opinion as to its application to the operations of the Government, where the considerations involved are of an entirely different character. The argument in favour of the revenue and expenditure account is largely based upon the physical impossibility to collect or pay within the year all amounts properly receivable and payable in respect of the operations for that period, but in the present case this objection is fully met by the provision of the law under which appropriations do not lapse for two or three months after the expiration of the fiscal year. On the other hand, an income and expenditure account, is necessarily more complicated than a receipts and expenditure account, inasmuch as to be complete it must take cognizance of the accrued depreciation, interest charges and similar items arising out of past capital expenditures, and in the case of a Government it would seem to be particularly desirable to reduce the annual

statements to the simplest terms, so that they may be as fully understood by the public as possible.

The statement of receipts and payments or the cash statement is the simplest form of statement and is also undoubtedly the most generally used and understood, and for this reason we think that in Government accounts it should be adhered to unless there are weighty considerations in favour of the revenue and expenditure form of account. Undoubtedly the considerations in favour of the revenue and expenditure account are stronger in the case of departments which are more or less of a commercial character and where comparisons with the results attained by commercial enterprises constitute a measure of the efficiency of the Government department. In order, however, to institute effective comparisons between Government departments and commercial houses engaged in similar industries it is of course not only necessary to obtain figures of cost on the same basis, and therefore fairly comparable, but also to have comparative statements of output or services rendered. This latter may be in the form either of a comparison of the number of units of service rendered or of a comparative statement of the commercial value of the output. The former method is, of course, applicable in the case of such industries as gas and water departments, and in such cases it may well be desirable to keep the accounts so as to facilitate comparison with commercial enterprises.

In the Printing Bureau, however, while much of the simple printing is capable of reduction to a fixed unit there is much of a special character of which it is impossible to express the total output in a number of units. On account of this special work it seems to us impracticable to obtain reliable figures as to the commercial value of the total output. If the policy were adopted of awarding contracts to the Department or to outside parties impartially and according to the prices quoted the determination of the value of the output would of course be practicable, but even then there would be a considerable amount of confidential work which could not be sent outside the Department and it would be necessary to assign a commercial value to this output, which would afford opportunities for concealing or misrepresenting the results of the Department's operations. You will readily realize that the costs of operation in a department such as the one now under consideration could be so calculated as to show a low cost on the work open to competitive bid while the cost of work which of necessity had to be executed by the Department could be correspondingly inflated. To guard against any such concealment or misrepresentation we would consider it desirable that the cost accounts of the Department should be periodically audited and careful consideration given from time to time to the apportionment of the general overhead expense as between the different classes of work performed.

We submit herewith (Exhibits 1 and 2) forms of statements which we would consider best fitted to clearly set forth the results of the annual operations of the Department. These statements should be supported by subsidiary statements showing such further detail as to the various classes of supplies purchased, wages, expenses and costs as may be considered desirable.

The adoption of the form of account suggested would not entail any radical revision of the accounting system. The books would be kept open as at present after the close of the fiscal year in order that the balances outstanding on accounts receivable and payable might be collected and paid. We would suggest that any balances outstanding when the books are finally closed (which should be small and unimportant) be transferred to the operating account of the year, an entry at the same time being made reinstating the amounts in the accounts of the succeeding year. We might mention that at the end of May the following liabilities affecting the accounts to March 31, 1912, were outstanding, but these are of an exceptional nature, viz.:—

(*a*) Goods ordered by the late Superintendent of Stationery and taken into stock; payment has been stopped pending a settlement.	$10,813 36
(*b*) Payment made by the Department of Agriculture to the Printing Bureau for work done outside. A dispute with the outside firm occurred and settlement has been deferred.	5,576 12

CONCLUSION.

In concluding this report it may be well to briefly summarize the recommendations which we have made, and to again refer to the various points which are submitted for your further consideration:—

(1) The Purchasing Agent should have entire charge of all purchases of Stationery Supplies, and orders for outside printing and lithographic work should be passed by him. The Superintendent of Stores should not be allowed to make purchases of stationery supplies and interview dealers, and the Superintendent of Printing should not give orders for work done outside his department (see page 353).

(2) Greater care should be exercised in keeping the files of the Purchasing Agent up to date. Contract orders should be separately filed, and orders remaining unfilled for an unusual length of time should be transferred to a special inquiry file (see page 353).

(3) The Stationery Supplies kept in stock should be standardized as far as possible (see page 355).

(4) The stock records are not kept up to date. The stock ledger should be divided into sections, each of which would be controlled by an account on the general ledger. The stock records should be placed under supervision of the Accountant (see page 355).

(5) Where goods are returned to stock, credit notes should be issued. The system of requisitioning could be improved upon, but we are not in a position to make recommendations without knowledge of the requirements of the various Government Departments (see pages 356 and 357).

(6) Stationery expense is now apportioned on the basis of arbitrary percentages, which should be carefully considered from a practical operating standpoint. The system should be changed so that the total overhead expense added to the cost of the work may be ascertained. The overhead expense now distributed does not include all expenses properly chargeable against this division of the Department (see pages 356 and 357).

(7) Inventory records should be kept of standing type, copper plates and engravings. An inventory should be taken of all machinery and the various machines entered individually on records at cost or present value. Depreciation should be calculated on each machine and the amounts expended on renewals shown, so that it would be possible at any time to determine the value of the Department's investment in machinery.

(8) The overhead charges added to the cost of printing do not include all expense and cannot therefore be considered true costs (see page 359). The cost records should be placed under supervision of the Accountant.

(9) A Cashier should be appointed to relieve the Accountant of all duties connected with the receiving and disbursing of cash (see page 362).

(10) The present pay-roll system requires revision (see pages 365-366).

(11) Mailing lists should be periodically compared with those of other Government Departments. Copies of official publications should be returned to the Department if not required, and a record should be kept of those destroyed (see page 366).

(12) The entire time of the clerk in charge of the Revision of Voters Lists is not now employed, and we submit for your consideration the advisability of merging this office with some other division.

(13) The question of the employment in the Department of both Civil Servants and those on the Temporary List is one that requires careful consideration (see page 368).

(14) It does not appear that the annual accounts of the Department are drawn up in a sufficiently clear and intelligible form. A suggested form is submitted (see pages 368 to 370).

(15) With regard to the revision of the organization and management of the Department, we are of the opinion that the King's Printer requires to be relieved of certain administrative routine duties. As far as possible he should avoid the perfunctory signing of documents, and the power and authority should be deputed to the superintendents to settle routine transactions and sign all the necessary papers relating thereto.

In conclusion we have pleasure in stating that the officials of the Department have afforded us every facility in our investigation.

Respectfully submitted.

PRICE, WATERHOUSE & CO.

EXHIBIT 1.

DEPARTMENT OF PUBLIC PRINTING AND STATIONERY.

STATEMENT OF REVENUE AND EXPENDITURES FOR THE YEAR ENDING MARCH 31, 1912.

Balance April 1, 1911, being the value of the Assets in the hands of the Department at that date as follows:—						
Inventory of Stationery Supplies.. ..			$ 194,690 66			
Inventory of Printing Work in progress..			179,567 79			
					$ 374,258 45	
Expenditures:—						
(a) On Advance Account:—						
Stationery and other Supplies..	$	702,035 95				
Wages and Salaries (Exhibit V)..		578,525 14				
Miscellaneous Expenses..		8,159 22				
Printing and Lithographic Work outside (Exhibit IV)..		290,617 35				
			$ 1,579,337 66			
(b) On Appropriation Account (see contra):—						
Expenses—						
Civil Government Salaries...	$	64,712 41				
Contingencies—cleaning Wages		2,634 97				
Sundries..		4,013 60				
Plant Repairs...		6,988 10				
			78,349 08			
					1,657,686 74	
Capital Expenditures:—						
Additions to Plant..					34,972 46	
Balance on Revenue Account, Transferred to Consolidated Revenue Fund:—						
Surplus on operations of Stationery Office..			$ 7,138 19			
Miscellaneous Income, per contra ..			37,178 74			
			$ 44,316 93			
Less—Deficit on operations of Printing Bureau..			42,818 66			
					1,498 27	
					$2,068,415 92

EVIDENCE

RE

LAKE TIMISKAMING DAM CONTRACT

PUBLIC WORKS DEPARTMENT

PUBLIC SERVICE COMMISSION

OTTAWA, FRIDAY, January 19, 1912.

PRESENT:

Honourable A. B. MORINE, K.C.,
Chairman.

G. N. DUCHARME, Esq.,
R. S. LAKE, Esq.,
Commissioners.

ARTHUR ST. LAURENT, Assistant Deputy Minister of Public Works, sworn:—

By the Chairman:

Q. When were you appointed to your present office? A. I was appointed, I think, in August, 1908, the same year as the new Civil Service Act was passed.

Q. How long previously had you been in the government employ? A. Since 1889.

Q. In the Public Works Department? A. In the Public Works Department all the time, but not in Ottawa. I was seven years in Winnipeg in the Resident Engineer's Office, and in 1899, I was transferred to Ottawa.

Q. You are an engineer by profession? A. Yes, sir.

Q. In connection with the Timiskaming Dam matter, which we are about to inquire into, you had particular charge of that, had you not? A. Well, not particular charge; I was not the engineer in charge, but I had lots to do with it.

Q. It was under your department? A. Yes, and many things were reported to me direct.

Q. You had control of the work rather than the Deputy Minister? A. Well, all engineering matters would be either referred to the Chief Engineer or to me.

Q. The Chief Engineer would report to you concerning this matter, would he not? A. He would not report to me directly. He would report to the Deputy Minister directly, and the papers would be referred to me. I do not know if they were all referred to me or not.

Q. In the discussions of this matter with the Minister, you would be the person to whom he would speak in the office? A. Naturally, it would be the Chief Engineer first, and, at the time, as the Chief Engineer was ill most of the time, then these matters came more to me which would have gone directly to the Chief Engineer otherwise.

Q. Getting back to the early history of this matter, surveys were made some time about 1905. A. Yes, by Mr. G. F. Brophy.

Q. And it was proposed to build a wooden dam at the head of the island at the foot of the lake, which divided the Ottawa River into the East and West Channels? A. Yes, the Quebec and Ontario Channels we call them.

Q. The East Channel is commonly called the Quebec Channel and the West Channel the Ontario Channel? A. Yes.

Q. Up to 1908, when tenders were called for, were any further surveys made than had been made by Mr. Brophy? A. About the dam, not to my knowledge. I know, as a fact, that instructions were given by the Chief Engineer to Mr. Brophy to prepare contract plans for that dam some time in 1908.

Q. I am only asking you, as to your own knowledge; whether any surveys, to ascertain the conditions more accurately were made between 1905 and 1908? A. Not to my knowledge.

Q. The dam proposed by Mr. Brophy and held in mind right through 1908 was to be a wooden dam at the head of the island? A. Yes, Mr. Brophy was supposed to have all the information, and he was asked to prepare contract plans.

Q. Now, with regard to the scheme to build a wooden dam, at the time the tenders were called for in 1908, did the Department have such definite information that you as an engineer would say the dam could be proceeded with? A. Well, I cannot say anything as to that. The information was in the hands of Mr. Brophy at the time. I do not know what information he had when he was asked to prepare plans for that. I do not know what amount of information he had; it was only after that that the matter came under my special knowledge.

Q. I find that Mr. Matheson reported to you on October 9th, 1908? A. Yes.

Q. What was Mr. Matheson? A. Mr. Matheson had been added to Mr. Brophy's staff originally to push the work along. Mr. Brophy had Mr. Perrault, and as there was pressure on the Department to hurry up the work, Mr. Matheson came in then with the intention of pushing the work as much as possible, and Mr. Matheson was added originally to Mr. Brophy's staff. I think he was told to report to Mr. Brophy.

Q. Did you know Mr. Matheson before that date? A. Yes, Mr. Matheson had been working for me on the Georgian Bay Ship Canal Survey.

Q. He was an Engineer? A. He was an Engineer. May I tell you how it came about that this work came to pass from Mr. Brophy's hands to the Ottawa River Staff.

Q. In the first place, Mr. Brophy had charge of what? A. He had charge of the construction of reserve dams. In surveying from the Georgian Bay Ship Canal, we found that reserve lakes were necessary in connection with the Canal project, and so the two things dovetailed together a good deal. But Mr. Brophy had made his surveys then, and we made further surveys and investigations in connection with the Georgian Bay Canal to find out how much reserve we could get in order to decrease the fluctuations in the Ottawa River and render navigation more easy. As you know, there was pressure brought on the Government to start these dams as surveyed by Mr. Brophy. There were deputations and they brought out the facts that the going on with that scheme of reserves would increase the low water flow, benefit the water powers in the river, and the navigation at extreme low water in the river. The navigators had some trouble. Then, Mr. Brophy was asked to prepare plans. The plans were prepared for a wooden dam and tenders were called in due time, and one day Mr. Brophy called me up to his house; he had been ill for quite a few weeks in bed, and he asked me if I would not arrange so that this work he had in hand could be passed to the old Georgian Bay Ship Canal Staff, which were not quite finished at the time, and we were continuing investigations in connection with storage and regarding the navigation project. I told Mr. Brophy that I would make a recommendation to the Minister, so that this work would pass under the storage staff, in connection with the Georgian Bay Canal. I made a memorandum to the Minister and suggested that the work be placed in charge of Mr. Coutlee, who was carrying on the investigations. This was approved of. Then these plans for the wooden dam, came more particularly under my notice then, and as an engineer I was in favour of permanent construction for these dams, and I took the whole responsibility for recommending that the change be made.

Q. Can you fix, accurately the date of your interview with Mr. Brophy? A. I cannot.

Q. It was in 1908 evidently? A. If I remember well, it was during the winter and he had been sick in bed for a long time.

Q. You say that was in the winter; you had been reported to by Mr. Matheson in October, 1908, concerning this dam? A. I don't remember the date.

Q. You must have assumed charge of it by that time? A. I was not in charge of the construction; I was in charge only of the proceedings that took place between the Engineers.

Q. I am not referring to the actual work of construction; I am referring to the Department dealing with the matter. It had by that time, October 9, come to you, because Mr. Matheson reports to you on that date? A. That must be so.

Q. Your interview with Mr. Brophy must have been prior to that? A. I cannot say if it was prior or not.

Q. Why was Mr. Matheson, who was on the Georgian Bay staff, reporting to you about the Timiskaming Dam, unless the work had passed from Mr. Brophy to that staff? A. Mr. Matheson had first been given as a help to Mr. Brophy. I think there are letters that will show that.

Q. If it was still with Mr. Brophy and Mr. Matheson would the reports be made to you? A. Not to me directly.

Q. This report is to you directly? A. That may be.

Q. I am trying to fix, as a fact, whether you had assumed some special supervision over the matter by October, 1908? A. I cannot say. It must have been after that that the transaction was made. I have not seen these papers for a long time and the dates I cannot recollect.

Q. So far as the wooden dam was concerned, its object was in connection with the Ottawa River navigation? A. Its object was the reserving of water for the increase of power, and to help navigation during the low water periods.

Q. The wooden dam that was contemplated and the raising of the water in that way, would have no connection with the Georgian Bay project? A. It would have, to some extent.

Q. Well, I find this expression in the letter from Mr. Matheson to you, dated October 9, 1908; he says:

> "Owing to the short time at my disposal, I have not had time to figure the stability of the dam with these probably unconsidered conditions, as they would be entirely in reference to the operation of the Georgian Bay Canal and therefore outside of the conditions for which this dam is proposed."

A. Well, for the Georgian Bay Canal, we wanted the dam built higher.

Q. The original dam that was first proposed had nothing to do with the Georgian Bay conditions? A. It had, so far as the quantity of water reserve is concerned. Mr. Brophy I think proposed to raise the level only five feet something, and we wanted to raise the water much more than that, in connection with the Georgian Bay Canal scheme.

Q. If you applied it to the Georgian Bay Canal scheme, you would have to have a higher dam? A. Yes, so as to have more reserve.

Q. When you started with your suggestion that it should be built of concrete and be a permanent structure, you had the Georgian Bay Canal scheme also in your mind? A. Oh, yes.

Q. And you wanted that concrete dam so that it might serve that purpose? A. Yes.

Q. Consequently, it would have to be a much higher dam than the wooden dam that had been intended? A. Well, it would be built so that we would conserve a higher depth of water on top of low water.

Q. What you mean is this: When, on your advice, the Department decided to build a concrete dam, you intended to have that dam higher than the old wooden dam? A. Oh, yes.

Q. And, consequently, the extent and size of the dam would be very much greater than the wooden dam? A. Yes, it would be greater, certainly, in height.

Q. It would have to go much further down in order to get stability? A. Not necessarily. At the time it was thought that the foundations were rock with the information in hand, but when this was taken over by our staff, new investigations were made, and they did not find any rock. The old plans for the wooden dam, showed a rock surface. I think that the bed of the river was so tightly packed with great boulders, brought down by glaciers, that this was taken for rock.

Q. Now, the plan showing it was rock, which was before you, when you decided on concrete, had been made by Mr. Brophy and his staff? A. Yes.

Q. And, when you proposed concrete, you had only these plans before you? A. I had only these plans before me, and I ordered a new investigation and that was carried out by Mr. Coutlee and Mr. Matheson.

Q. By the way, speaking of Mr. Coutlee, he is a civil engineer? A. Yes sir.

Q. Permanently employed by the Department? A. Since 1904. I would not call him permanent; he is an extra employee; he is not under the Civil Service Act; he is an outside man.

Q. Did the Department employ him before 1904? A. He was employed by the Railway and Canals Department before that on the Soulanges Canal.

Q. Is he continuously employed now, and has he been since 1904? A. Yes, sir.

Q. You say that it being decided to build of concrete, Mr. Coutlee was instructed? A. To prepare new plans for concrete.

Q. That required quite a long time to do it, did it not? A. Yes, quite a long time.

Q. When did Mr. Coutlee start that work? A. I cannot say without looking at the papers. He started at work the moment he got his instructions to take charge.

Q. For instance, I find on February 16th, 1909, that the Chief Engineer says: "Mr. Brophy had been instructed to arange for the prepartion of contract plans and "specifications"—he would apparently be in charge of the work then? A. Yes.

Q. And the plans there referred to must have been for the wooden dam? A. Yes.

Q. Mr. Brophy has nothing to do with the plans for the concrete dam? A. No.

Q. On February 10th, you sent a memo. to the Chief Engineer in which you say that the principles of building permanent concrete structures, &c., has been adopted, and then you go on to say: "The plans and specifications for these dams should be prepared with the shortest possible delay"—that was the commencement of the active work under you? A. Yes.

Q. When you say that the principle of building permanent concrete structures has been adopted, what authority was there for that statement? A. Well, I discussed the matter with the Deputy Minister and the Minister, I think there must be a memo. on file from me in this connection giving my reasons. It was simply approved.

Q. On January 16, 1909, you said a memo. to the Minister that the dam should be built of concrete? A. Yes.

Q. Then, that matter was discussed between you and the Minister and the Deputy? A. Yes.

Q. And on February 10th, you told the Chief Engineer that a decision had been arrived at? A. Yes, that the recommendation had been approved.

Q. On February 4th, the Deputy Minister, writing to the Minister, refers to you a recommendation for concrete and to the objection made by the Auditor General, and on the 20th of February, the Minister made a memorandum for Committee of Council, authorizing the change to concrete? A. Yes.

Q. Now, various memorandums are prepared to go to Council in the name of the Minister, and in preparing these memorandums for Council, who would have to make

all preparations for them? A. Well, the Secretary first, ordinarily, being his recommendation on the reports that are on file. The Secretary does practically all the work of preparing the recommendation.

Q. He prepares the recommendation, he would have to consult with whom?—A. Well, these are handed to the Deputy Minister and the Deputy Minister makes corrections sometimes.

Q. Do you mean to say that the Secretary when he makes his draft hands it to the Deputy Minister and the Dupty Minister criticises it? A. Well, that may be.

Q. And the Secretary gets his instructions in what way? A. He gets his instructions to prepare the recommendations to Council, directly from the Dupty, and he looks at the file. If the information is complete, he bases his recommendation on that and goes back directly to the Deputy. If the information is not complete; if it is technical information he wants, he refers to the Chief Engineer's Office to give him a recommendation, and in some cases he would come to me.

Q. We will take these various memorandums; there were four or five that went to council in the course of this dam matter, which matter was under your charge; it would be natural that the Secretary in preparing these memorandums should consult you? A. In this case, he consulted with me, and when he did not, he had all my memos.

Q. But you would be the source of his information on the matter? A. And I would get my information from engineers as to data.

Q. Now, looking at the memorandum to Council, dated the 20th of February, I find that Council adopted that memorandum on March 13th, but on February 10th, 10 days before the memorandum, you had told the Chief Engineer that the principle of building of concrete had been decided on? A. Well, on the approval of the Minister.

Q. The point I want to get at is this: the decision to build of concrete instead of wood, and the order to proceed with the plans and specifications for concrete, had been adopted by your Department, more than a month before the Committee of Council approved? A. It may be according to these dates. The moment the Minister approved and he signs the recommendation, there may be quite a time that elapses before the approval of that recommendation by Council, and the Minister very often, or the Deputy, will tell the engineers to go ahead with the preparation so as to lose as little time as possible.

Q. I want to get at this particular matter now. After the consulaion on February 10th, 1909, you are able to tell the Chief Engineer that concrete has been adopted? A. Yes.

Q. Ten days later, the memorandum is prepared for Council, containing the recommendation of the Minister, and that is adopted, by Council on the 13th March. A month prior to its adoption, the Engineer had begun preparations for plans and specifications for the concrete structure. Then, the Department was committed to the work of going on with his concrete before Council gave its approval? A. Well, it was not permitted to build of concrete, for if Council decided not to do it the preparation of plans simply dropped.

Q. What preparation for the plans was necessary? A. Do you mean for the concrete?

Q. Yes? A. Well as the first plans that came under my notice did not define very well the kind of foundation—rock was shown and then some dotted line, and as it was more important for the concrete structure to have all the information possible about the foundations, they had to carry on some investigation, some further borings, and then, of course, the concrete plan would have to be different from the wooden entirely.

Q. And when you ordered these plans and specifications you not only started out with reference to the concrete structure, but also with reference to the increased dam, and its connection with the Georgian Bay Canal project? A. Oh, yes, that idea has always been kept in view

Q. On February 26, 1909, you recommended that Mr. Coutlee should take charge of the whole storage investigation? A. Yes.

Q. You say: "I find it impossible myself to continue in charge of that part of the storage connected with the Georgian Bay Ship Canal, and I therefore suggest Mr. Coutlee to take charge of the whole storage investigation?" what do you mean by storage investigation? A. Storage investigation, in connection with the Georgian Bay Canal, was much more elaborate than what Mr. Brophy had done with a view to relieving the conditions for the water powers. We had not only to look into the possibilities for conserving water on the main Ottawa River, but on the tributaries too, and Mr. Brophy's investigation covered only a few of the lakes, and we had to cover the whole of the watershed of the Ottawa River, in order to find enough basins or reserve lakes by which we could reduce the fluctuations of the Ottawa River to a certain minimum, and augment the water flow to a certain maximum. The investigations are still going on. They were very extensive, it will take years to collect the information; it is a big country and it is a very difficult country to go through.

Q. I find that it was not until July 12, 1909, that the Chief Engineer submitted the plans and specifications? A. Yes, for concrete dams.

Q. It took a long time? A. Yes, it took quite a long time.

Q. Can you fix the date when the actual work of further investigation began at the site of the dam? A. I think right after Mr. Coutlee got his instructions from the Chief Engineer. I think he ordered some borings first, and the investigation must have started right away.

Q. Mr. Coutlee on March 9th acknowledges his appointment to the charge of the work. In a memorandum by Mr. Coutlee to the Chief Engineer, dated April 5, he says: "During the first week of March, the writer and Mr. Matheson visited the dam site, and arranged to have two test pits dug on the Ontario side." These had been ordered by the Chief Engineer and were necessary to find the nature of the bottom? A. Yes, to find out if really rock was there.

Q. As a matter of course you could not begin to build a concrete dam without having test pits sunk and finding actually the nature of the bottom? A. Not unless the bottom was visible and it was evident we had rock.

Q. Under the conditions that existed in that place, you would not build a dam without test pits having been made? A. No, I would not do it without investigation.

Q. Would any sane engineer undertake such a work without doing that? A. They would not, certainly, without investigating the bottom.

Q. Well then, until that was done, the cost of a concrete dam there could not be, even approximately fixed, could it? A. Well, it turned out that it could not. But the old engineer under Mr. Brophy when asked what quantity of concrete would be required, if a change was made from wood to concrete, gave a certain quantity on the data he had and the plan.

Q. And on the plan which had been made for a wooden dam? A. Yes, he gave quantities based on that. At the time we did not know rock did not exist. I had never been there myself, you see.

Q. When it was decided to build a concrete dam at that place, you immediately, as a matter of course and of good practice, ordered testings to be made? A. Certainly.

Q. That implies does it not that work of that kind could not have been commenced, without having such testings? A. Oh no, it could not be designed or commenced without that.

Q. And, consequently, in preparing an estimate, on the information you had at that time, as to what a concrete dam would cost in the place of the wooden dam, it was merely guess work? A. Well, it was not guess work; the first quantities given by the Engineer were based on the plan which he thought was right.

Q. But it was based on a supposition, namely, supposing the original plan to be right, there would be so much work to be done? A. I do not think he had any reason then to suppose that the plan was not right.

Q. Why did you begin to make test pits afterwards? A. Because it was to be changed from wood to concrete, and we had to take a good deal more care with concrete work.

Q. But you supposed that plans might not be right? A. I supposed that the plans might not be right because I saw a dotted line on the section which showed they were not sure whether the rock was there or not.

Q. As a matter of fact you proceeded upon the principle that you could not rely on those plans before you? A. For a concrete dam, I certainly did.

Q. Then, when the first estimate was made that a concrete dam would cost so much, it was based on this proviso—provided the plans made for the wooden dam are correct? A. Yes, the first estimate had been asked, and I don't think I had thought of the change at the time. I was simply asked what would be the quantities for a concrete dam instead of a wooden dam on the section shown.

Q. Assuming that the plans were right? A. Yes.

Q. But as a matter of fact, you did not assume for a minute that the plans were right when you came down to the question of building? A. I was in doubt about the foundation.

Q. As a cautious engineer, you would not assume they were right? A. I was in doubt, because the definite information was not shown on the sections.

Q. The thing has gone on now, and you have had experience? A. Yes.

Q. I put this question; when in March, the memo. to Council was prepared in which it was stated that concrete in place of wool would cost $108,000 you had no sufficient data before the Department to assure Council that the cost would be $108,000 or anything like $108,000? A. I thought the Engineer had.

Q. I am not asking you what you thought then; I ask you if, as a matter of fact, there was sufficient data? A. I do not know what data the Engineer had at the time. We simply asked his quantities. So far as I am concerned then, I simply asked his quantities.

Q. I know, but this has gone on for several years now, and you know what it has cost? A. Oh, it has gone beyond our expectations.

Q. Now, suppose Council had asked you to come before it, and at that time had said: Mr. St. Laurent do you pledge your professional reputation that you have sufficient evidence before you upon which to base us an estimate which you believe will be approximately correct, what answer would you have made? A. I would have to refer Council to the quantities given by the Engineer at the time. At the time I did not know any more than anybody else; we had to take the Engineer's report.

Q. But I am asking you now a definite question; you were placed in immediate charge of this work? A. No, not in immediate charge of these details.

Q. I am not talking about these details, but you had to advise the Minister? A. Yes.

Q. And you were an engineer of experience? A. Yes.

Q. Suppose the Committee of the Privy Council had sent for you to come before it at that time, and they put this question to you: Now, Mr. Assistant Deputy, Council is anxious that when it starts this work, it shall know as closely as possible what it is going to cost, are you ready to pledge your professional reputation that you have sufficient data and are sufficiently certain about it to give us an estimate which will be as accurate as any estimate could be, what would your reply be? A. I could not do it, sir. I had to base my recommendation on the quantities and report of the Engineer at the time. I could simply answer that I trusted the Engineers.

Q. Would you have answered that you trusted the Engineers? A. Well, that I trusted their report, and the report to Council was prepared and based on that.

Q. But they had never reported on the concrete structure? A. The quantities had been given by Mr. Perrault who was working then under Mr. Brophy and who reported that it would take so much concrete to change from wood to concrete.

Q. But to be fair to Mr. Perrault, the question put to Mr. Perrault was—? A. I want to be fair to Mr. Perrault.

Q. We all want to be fair to Mr. Perrault—the question put to Mr. Perrault at that time was simply this: take the plan made for the wooden dam, and all the data prepared for the wooden dam, and just change from wood to concrete, so that your location and the dimensions remain the same, and all that is changed is from wood to concrete, what will it cost? That was a simple mathematical computation, was it not? A. He had to prepare a new section for concrete, to meet the object in view, according to Mr. Brophy's report, and base his quantities on the section of rock shown on his plan. Mr. Perrault thought his plans were right. I do not think Mr. Perrault took these sections himself.

Q. And when he was asked to make that calculation his answer was based upon the assumption that all the material before him was correct? A. There is no doubt about that.

Q. Then, so far as Mr. Perrault's answer is concerned, it is merely applied to the change from wood to concrete? A. Yes.

Q. Then, when further test pits and the other things were ordered, it was because the Department knew it had not sufficient information to authorize it to go on with the concrete dam? A. Well, the new Engineer had to get his own information, and that is a thing that developed gradually. They ordered test pits and it developed gradually that the location of the dam had to be changed, and that we had better provide at the same time for a higher depth of water. All this developed gradually after.

Q. That you would have to provide for a higher depth of water was known at the very beginning of your concrete proposition; you told me that you had decided to change from wood to concrete because you wanted it higher? A. Not exactly at the beginning; that is the thing that developed gradually.

Q. Do you mean to say that you decided to change from wood to concrete before you decided to raise the height of the dam? A. I do not remember about the height of the dam, at the time. It developed gradually when the plans were brought in by the Engineers.

Q. When you ordered new plans and specifications to be made, and test pits to be commenced—or when it was ordered you agreed because you were in charge—you did it because you considered it good practice to do it before you started upon the construction of the concrete structure? A. Oh, yes.

Q. You would not have thought as an experienced engineer, of commencing such a large concrete structure without further examination? A. And I was probably advised at the time, after having talked with the Engineer, it would be safer to make further investigation.

Q. You say that 'probably' you were advised; were you advised? A. Well, in talking with Mr. Coutlee, and the Engineers——

Q. Do you say, as a matter of fact, that you were advised to do it? A. Oh, yes, all these things are discussed.

Q. Do not get into generalities; I am just testing your memory now; do you remember that somebody told you that it would be safe to have a further plan made; do you remember someone saying that to you? A. I think so; I think it was discussed with the Engineers and that was the conclusion arrived at.

Q. I want you to be particular if you can remember; do you remember anybody saying that to you? A. I do not remember anybody in particular.

Q. Did the Chief Engineer advise you you should have these test pits made? A. He did not advise me, he would have advised his engineers.

Q. I want to know whether he did, as a matter of fact, advise you that further tests should be made? A. I do not think so, because the Chief Engineer was ill most of the time.

Q. Did Mr. Coutlee advise you? A. Oh, yes, it was agreed together.

Q. I know it was agreed together; was it agreed together because you said that to Mr. Coutlee or because he said that to you? A. I cannot remember whether Mr. Coultee mentioned the matter first, or whether I mentioned it first, in the general discussion.

Q. Do you remember any special reason he gave you for it? A. No.

Q. Tell me why you decided it was desirable and necessary to make further tests and further inquiries about the matter? A. Well, on account of the changes that were necessary in connection with the concrete structure.

Q. You mean they were involved in the very fact of the concrete structure? A. And then, as a new engineer was placed in charge, naturally he might not have the location, he might not think the location, first selected, suitable to him.

Q. I want to get down to this—when it was decided in the Department to build of concrete instead of wood, did not that decision involve necessarily further tests, and plans, and specifications; did it not make these necessary? A. Do you mean the moment is was decided?

Q. Yes, the mere decision. Did it not make it necessary? A. It would have made it necessary if at the time we had known the condition of the bed of the river to be very different from that shown on the plan we had.

Q. Probably unintentionally, you are not answering the question, and I will put it plainly to you—I am speaking now to you as an engineer, as the head of a very important work and I say: With all the information in your possession at the time, and in view of the surrounding circumstances of every kind, when it was decided to change from wood to concrete, did not the fact of that decision to change the material necessarily imply that you must go and make further tests and plans and specifications? A. Well, not exactly, at the time the change was recommended, because I simply had not the information in hand myself; but simply had the quantities for the concrete dam to meet the object in view to replace the wooden dam. These quantities were given to me.

Q. You do not understand the question—when you made up your mind that you are going to put concrete there instead of wood, did it not at once occur to you that you could not begin building concrete without further tests and examination? A. That occurred shortly after, there is no doubt. At the time I took the section as being correct, but shortly after, these things gradually developed. I answered that these tests were certainly necessary in connection with the change.

Q. Do you mean that you would in any case advise that a concrete dam could be built where a wooden dam had been intended, without further investigation as to tho material and the nature of the bottom and all that sort of thing? A. I would in case of rock foundation, certainly.

Q. In case that the examination into the foundation had been sufficiently thorough to leave no doubt? A. When I made that recommendation, I thought that the investigation had been thorough. It was only shortly afterwards that it gradually developed that rock was not shown everywhere.

Q. When did this develop? A. Oh, shortly after.

Q. How shortly after, and what caused it to develop? A. Well, I think that in Perrault's orginal plan, I saw some rock was shown and others had for rock a dotted line which showed that they were not sure about the rock surface for that part.

Q. The orginal plan for the wooden dam showed that dotted line? A. Yes.

Q. And when that dotted line was meant to indicate that the bottom there was not certain? A. Yes.

Q. Now, clearly, up to that time you had not examined carefully Perrault's plan? A. In the course of ordinary business these plans don't come before us. They pass through the Chief Engineer and they then make these specifications.

Q. You say it was an examination of Perrault's orginal plan which caused you to feel that something more was necessary? A. Yes, to notice something more was necessary.

Q. And that original plan you had seen when you were considering the wooden dam? A. Yes, but it did not occur to me at first when I first saw the plan about this feature of it.

Q. It would be an engineer's duty to notice and ask what that meant? A. It would be the Chief Engineer's Branch.

Q. The Chief Engineer's Department or Branch should have noticed that and been aware of what it meant? A. Well, yes.

Q. When you were discussing the change from wood to concrete, did you consult with the Chief Engineer's Department about that? A. No, about the change from concrete to wood and to the principle itself, I take the whole responsibility of that recommendation.

Q. Yes, as to the principle? A. As to the principle of building concrete dams instead of wooden dams, which we would have to replace and which probably would be laid on the bottom and all that kind of thing.

Q. You would say, and anyone would say, that for a permanent work, concrete was better than wood? A. Yes. I take the whole responsibility for the recommendation.

Q. Then I want to get down to this—when you recommended that, and the Minister and the Deputy and yourself were consulting about that change, was the Engineer's Department asked what the concrete dam there would cost? A. When I made the recommendation for the change, I cannot say whether they were asked before that or after; it was asked anyway, whether it was before or after.

Q. But the principle of building with concrete instead of wood was adopted and recommended to Council, and you don't know whether or not the Engineer's Department was asked what that would cost? A. I do not know whether it was before or after.

Q. Furthermore, when the quantities were made up upon the change from wood to concrete, they were made, not by the Engineer's Department, but by Mr. Perrault? A. Yes, he sent the original quantities based on the original section.

Q. He was not in the Engineer's Department? A. He was under Mr. Brophy at the time, that is the Engineer's Department.

Q. He is an outside man? A. Oh, yes, he is not permanent.

Q. He was not in the office at Ottawa under the Chief Engineer? A. No.

Q. Can you tell me why Mr. Perrault was asked to give these quantities instead of your simply asking the Chief Engineer's Department to give you the quantities? A. That is probably because Mr. Lafleur, the Chief Engineer, was sick. I must have asked the quantities from Mr. Perrault direct, so as to hurry up matters. It was at the time that the Chief Engineer was away.

Q. I find that Mr. Perrault gave a report to Mr. Lafleur the Chief Engineer, under date January 14th? A. Yes, and he was probably asked by telephone to supply these quantities. There may not have been any letter asking him to supply these quantities.

Q. And you say that Mr. Lafleur may have been away at the time? A. Yes, I know he was away most of the time.

Q. There were some complaints made later on in the history of this matter about flooded wharves and landing places in the lake? A. There was a year of very high water, two or three years ago, when all these wharves were flooded.

Q. I find a memorandum from you saying that undoubtedly later on all the landing-places in the Lake will have to be raised at the public expense? A. Yes.

Q. There was a considerable amount paid later on for flooded lands? A. Not in connection with the Timiskaming; there has been nothing paid that I know of in connection with that.

Q. Have there been claims? A. Oh, yes, and we are still surveying the low parts that will be flooded.

Q. Would that be partly in consequence of raising the dam when you changed from wood to concrete? A. That would be partly in consequence of the higher level that we are going to maintain than was at first proposed.

Q. What I want to get at is this—if that wooden dam had been built there these complaints would not have arisen? A. Not to the same extent.

Q. The project of putting the wooden dam there was merely to conserve the waters of the lake in dry seasons? A. At all seasons to reserve part of the flood water and let it go during September and October.

Q. That would not have raised the level of the lake in flood waters? A. No.

Q. It would only have kept up the level of the lake in midsummer? A. Yes, five feet above low level.

Q. And that five feet would be distributed late in the fall and during the winter? A. Yes.

Q. In a memo. dated January 16, 1909, made by you, you say:

> "Owing to a clerical error in preparing the form for tender, in this work, the bulk tender was called for while the plans and specifications had been prepared with a view to having the work performed at unit prices."

What kind of clerical error would lead to that? A. We have printed forms which are submitted to intending tenderers to put their tender in. These printed forms up to two or three years ago, were all made out in bulk sum estimate. Later we began to call for tenders for unit prices based on certain quantities. The clerk that usually prepares these left that clause about the bulk sum in. There was a schedule of quantities and prices, but he left the clause for the bulk sum. By error it went to the printing bureau like that and these things never come back to us until they are advertised. It was only then noticed that the clause with the bulk sum had been left there. It was clearly intended to call for tenders by the unit so much per cubic yard.

Q. What was there to indicate that such was the intention; what memo. or otherwise is there to show that? A. There was an itemized statement of the materials.

Q. Now, taking the form of tender which I have before me, I find, first, it contains a place for a bulk sum and then I find this:

> "We also offer to execute work and to furnish all labour and material in connection therewith, subject to all conditions and requirements, and to bind ourselves to accept these prices at the rate and price which we have affixed to the different items in the following tables."

Certainly, that form of tender is quite consistent with the idea that this schedule of prices was to be applied to extra work? A. It was exclusively intended for the unit prices.

Q. What is there to prove that? A. That was the intention at the time. I do not know if the specifications did not show it. Have you got my memo. in this connection there?

Q. Yes, I think I have, but it does not say anything about that. It says it is a clerical error. It may have been an error, but it was not a clerical error, by any means? A. That was the view, and I would not state it without it being true. The clerk prepared the form there.

Q. What you mean to say is this: that your Department intended to call for unit prices? A. Oh, yes.

Q. And that the tender, as actually put before tenderers to be signed, called for bulk prices, with the schedule of prices, that, according to the tender, applies to extra work? A. Yes, and the part for the bulk sum should have been left out.

Q. Was the attention of tenderers drawn to that so-called error, before they put in their tenders? A. I cannot say, sir.

Q. Have you any reason to believe that it was? A. I think I would have some reason to believe, because some of the tenderers figured their old tenders based on that schedule list.

Q. That would be a very natural thing? A. That would make up the bulk sum, but they did figure on the old quantities.

Q. If you put the specifications forward containing particulars of the materials which are intended to form the structure and the tenderer is going to make a bulk sum price, he would naturally proceed by making out his own quantities as unit prices? A. Yes, he would calculate his own quantities, if we did not give them: sometimes we give the quantities.

Q. Did the specifications give the quantities? A. Yes, there is a list of all the material that would enter into the work.

Q. If, in these schedules, the unit prices were not intended by the tenderers merely for extra work, how would they have arrived at the bulk price without knowing the quantities? A. By taking their own quantities.

Q. It makes no difference how the tenderer gets the quantities, whether he works them out or whether you supply them, when he is going to consider about tendering, he must proceed in his calculations on the unit prices? A. Yes, but what I want to make out was that the tenderer did not make that schedule for extra work only. Some of them put their prices and extended their figures and adopted their bulk sum thereafter. What I mean is, that they did not make an itemized schedule of quantities only for extra work.

Q. Oh, no, in other words, you mean to say that the tenderers intended to ask for extra work only the same rates they were asking for the bulk work? A. Yes, but they extended their quantities and based their tenders on that.

Q. Precisely, in their tender they evidently contemplated the same price for the bulk work as for the extra work? A. Yes.

Q. Now I get back to the facts—do you remember that any tenderer was informed in any way that the Department desired united prices for the whole work and not a bulk tender? A. No, I cannot say that. These things may have been discovered only after.

Q. As a matter of fact, you have no reason to suppose that anybody discovered this error, as you call it, before you discovered it yourself? A. No, I knew practically what the intention was. Have you got the specifications here?

Q. No, the specifications have not been provided. A. There must be some clause dealing with the tenders and the prices in the specifications. There must have been something in the specifications which would show that the intentions were to call for tenders at unit prices.

Q. You say in that same memorandum, referring to the Department's intention to have unit prices: "This was necessary on account of the impossibility of determining the true profile of the rock formation underlying the loose material in the bed of the river, which at one point is very deep, and to survey, to enable reliable test borings to be made." A. Yes, it has been impossible to make tests in that part.

Q. But you told us a moment ago that the fact that the plan, &c., could not be relied on only occurred to you when you discovered that Mr. Perreault's plan had a dotted line? A. Well, about that time or shortly after.

Q. Now, in this that I have just quoted from you, you are referring to the intention of the Department, away back in October, 1908, when it called for prices; don't you there see that the Department must have had that knowledge of the unreliability

of this plan in its mind when it asked for tenders? A. Well in all hydraulic work, there is always an uncertain element, and that was one of the reasons why it was intended to call for tenders by unit prices, because no engineer, and nobody, could state exactly what amount of material really would have to be excavated or what amount of crib-work would have to be built in the end. Even a rock surface, if you have it under the river bed, where you cannot see it, has many inequalities, and that cannot be determined until you do the actual work. In every case, we never can state the exact quantity.

Q. As a matter of fact, the Department when it asked for tenders in 1908, knew that reliable test borings had not been made? A. I do not know about that; Mr. Brophy must have made some tests.

Q. Did the Department ask for tenders, believing that it had reliable information, or believing that the information it had was not reliable? A. It had reliable information, so far as it could go in connection with hydraulic work.

Q. Well now, could not reliable test borings be made some time after? A. In one part of the river it was practically impossible to make test borings.

Q. Your argument here is, that the Department intended to ask unit prices and not bulk prices in October, because it knew, upon the information in its possession, that the cost of the work could not be reliably estimated? A. It could not figure, because the quantities might be more or less.

Q. And they might be greatly more or less? A. Oh yes.

Q. That is what I tried to get at in the beginning of your examination—when the work of building the concrete dam was started, in the very nature of things, what it was going to cost could not be known? A. Well, not exactly.

Q. Would you say, even approximately? A. Not even approximately in hydraulic work of this kind. We do the best we can to state the quantities to the best of our knowledge, but in hydraulic work there are so many hidden things, that our assumption, or whatever it may be, our deduction may be all at sea.

Q. That does not mean, to the best of your knowledge at the time you made a certain proposition, but to the best knowledge which under natural conditions, you can arrive at. When you say: I gave an estimate to the best of my knowledge, you don't mean that you gave an estimate to the best of the knowledge which you happened to have? A. To the best of my knowledge according to the information I had before me.

Q. Then your estimate when you started to build the concrete dam, was given merely to the best of the knowledge you had at that time? A. Yes, to the best of my knowledge.

Q. I want to get the meaning of that phrase—what do you mean, to the best of the knowledge you happened to have or to the best of the knowledge you could get under natural conditions? A. Well, to the best of the knowledge that I could get under natural conditions, and to the best of the knowledge which we can obtain in hydraulic work.

Q. What amount of knowledge did you have when in February, 1909, it was decided to build a concrete dam? A. The knowledge was the plan and the information brought in by the engineers.

Q. That is the best knowledge you happened to have and not the best you could have got? A. Yes, and I know we could never arrive at the exact knowledge of what could be done until the construction was made.

Q. You go on to say: "The plans therefore do not show the actual quantities in excavation and material which will be required in the foundation." You are talking about wood there. Then you continue: "And are open for large claims for extras over and above the lump sum tendered, and for which reason the estimate on unit prices was prepared." Now you contemplated you were going to have large claims for extras even with the wooden dam? A. I did not contemplate it but it

might be possible. I was not speaking only of that one work there. It is our experience in connection with all hydraulic work that we are liable to have these claims and that is why we preferred unit prices, because if the quantities are increased, it is fair to the contractor that he should be paid for these quantities, and if they are decreased it is fair to the Department we should not pay for them.

Q. Quite so, and that is as plain as the nose on a man's face, but if I were to say with regard to the Ottawa River, the dam would cost so much, probably my estimate would be too large for it because I know nothing about it, but if an engineer were to say it, it ought to reduce the liability for extras very much, because he ought to know a good deal about it. There is always a risk of extras, but that risk could be reduced by correct knowledge to a minimum. Now, I want to get at this: whether to-day you believe; I will put it the other way: whether at that time you believed that you had that degree of correct knowlege which competent engineers could get and ought to get before they entered on the construction of a large work, and the making of an estimate? A. At that time do you mean?

Q. At the time the Department decided to use concrete instead of wood. Do you then believe that you had that degree of accurate knowledge which competent engineers could get and ought to get before they estimate the cost of hydraulic work? A. Well, evidently I did not because we ordered further investigations.

Q. And the fact is proved that you did not? A. Yes, even with two or three years' experience at the Timiskaming I cannot say what it will cost because there are unforeseen things that may still be coming. We believe we have all the knowledge necessary, but, as we go along, things turn out differently from what we expect.

Q. But there are precautions which can, and ought to be taken, in every case? A. Yes, and I am not sure we will not have more accidents there although we have the best men possible.

Q. Now, with your experience of public work scattered all over Canada, is it not clear that these public works are started upon without that degree of accurate knowledge, as to the cost which is likely to be incurred and which a competent engineer could get and ought to get? A. I will tell you that I have lately advocated a Board of engineers to whom all the contracts could be submitted or which could be referred to them.

Q. Your experience leads you to think that that is necessary? A. I believe that it is an absolute necessity. We are going into larger work all the time and our work has increased so much that the Chief Engineer's Branch has had no time sometimes to look into all the details. We had to trust to resident engineers here and there and it is a necessity that we should have a body that would look to the details and study every harbour and river work. Might I add that I believe that even with that board of engineers, it would not eliminate all the difficulties and the accidents which may happen. You have the Panama Canal as an example of that. There is no work in the world where such extensive studies have been made in years past by the French and by the Americans, and the Americans have taken that work after the large experience that the French had with it, and they estimated it would cost two hundred million dollars, and it has now increased to three hundred and seventy-five million dollars on account of unforeseen difficulties and excavations and hydraulic work. It turned out very differently from what they expected, and they had board upon board to study these questions.

Q. I notice that on January 16, 1909, you refer to this clerical error and you go on to point out how impossible it is to determine the true profile of the river, and you add: "that the dam should be built of concrete." Now, had you at that time talked to the Deputy Minister and the Minister about concrete instead of wood? A. Not to the Minister probably. I must have talked with the Deputy and the Engineer about the advisability of building it with concrete.

Q. You do not know whether you talked to the Minister? A. No. We refer a thing to the Minister only after discussion and for his final approval.

Q. The tenders were put in on the 18th of November, 1908, and there is an endorsement on the back of the tender of Kirby & Stewart: "award contract W.P."; that would be the initials of the Minister? A. Yes, that would be the initials of the Honourable Mr. Pugsley.

Q. The date of the tender itself is the 19th November, but the date of the initials is not there? A. It must have been a few days after that he put his initials on.

By Mr. Lake:

Q. Who opens the tenders? A. The Deputy Minister and the Secretary usually, there are always two.

By the Chairman.

Q. On the 21st November there was a schedule of tenders received prepared, and that schedule would go before the Minister, and the tenders themselves would go before the Minister? A. Yes, with the whole file of tenders.

Q. There was a report to Council prepared dated November 23rd. Now, in a letter dated December 29, 1910, the contractors, Kirby & Stewart, say they were told in November the tender would be awarded to them; do you know who told them? A. I remember at the time there was a deputation pressing for the commencement of these works, and the Department, anticipating I think the granting of the Order in Council told the contractors to go ahead with the work because they wanted to profit by the winter road to get their timber.

Q. As a matter of fact the contractors were not getting the timber out themselves; they were contracting with other people for it? A. Well, they would give orders to the lumbermen to get their timber out.

Q. But it would not be necessary that orders should be given in the fall; orders could be given at any time during the winter? A. Yes, but that was in November, they wanted to get their timber out that winter and have it cut, and so on.

Q. I find that Council did not sanction the contract until January 18th? A. Well, they must have been told to go ahead after that.

Q. They say they were told in November that their tender would be accepted and the Minister had, in November, decided to accept it? A. Well, I would not know anything about that. The Minister may have told them but I did not know.

Q. You did not tell them anything? A. No.

Q. As a matter of fact, if they were told in November, that would be two months before Council had sanctioned the contract? A. Yes, it was practically two months.

Q. Is it the practice in your Department for a Minister to authorize work to begin before Council approves of contracts? A. I do not understand that he did authorize them to begin work then; they were told they would have the contract.

Q. You say they were told that in order that they may enter into arrangements about timber? A. After the passing of the Order in Council, I mean, I know as a fact they were told to go ahead by the Deputy Minister.

Q. You don't know anything about their being told in November? A. Oh, no.

Q. You don't know if they did enter into any contracts in November? A. I don't know anything about it; I don't think they did.

By Mr. Lake:

Q. Would they naturally know from the fact that the money was being returned to the other tenderers? A. They would naturally know that way. Being the lowest tenderers, very often the Minister would take upon himself to let them know that they were the lowest tenderers, and that the matter would go to Council in due course and if approved by Council they would get it.

By the Chairman:

Q. Is the intention of letting them know that, in order that they might commence work, or, enter into engagements before the Council approved? A. It is not the intention of the Department that they should do it; they are simply advised they are the lowest tenderers.

Q. And Council has the right to accept the lowest or any tender? A. Yes.

Q. And sometimes Council does not accept the lowest tender, I suppose? A. To my knowledge practically they have always accepted the lowest tenders, but not always, and they always have the right to reject. Oh, yes, there may be some reason for doing that.

Q. After it had been decided in your Department that concrete was preferable, mention of that intention was made to the Auditor General? A. Yes, these discussions with the Auditor General were not carried on through me.

Q. But I am speaking of your knowledge as to the facts because you afterwards had some correspondence about it? A. Yes, some letters of the Auditor General were referred to me.

Q. Do you know from that letter that the Auditor General was told of the intention to build of concrete and also of the intention to give the contract to Kirby & Stewart without new tenders? A. Yes, sir.

Q. And that objection by the Auditor General was referred to you for criticism and you prepared a memorandum arguing in favour of not having new tenders but of giving the contract to Kirby & Stewart, and I find you say this:

> "Apart from the moral obligation in which the Government is placed to make no further delays in commencing this work, in order to keep fair with power users, &c., it seems that the Government, as the mater now stands, cannot ignore the fact that the lowest tenderers are entitled to first consideration under altered conditions, so long as these conditions are covered by the tenders."

That was the argument you used. What do you mean by "as the matter now stands." You say "It seems that the Government, as the matter now stands, cannot ignore the claims of the tenderer." What was the matter to which you referred? Had they, so far as you knew at that time, entered into any obligation to anybody? A. That is what I was given to understand.

Q. What were you given to understand? A. Because the Department through the Deputy, authorized by the Minister, told them to go ahead when the Order in Council was passed.

Q. You mean to say that between the date of the Order in Council, which was only adopted on January 18th, and February 3rd, these contractors went ahead and did something? A. No, I don't mean to say they did something but they were told to go ahead.

Q. How do you know they were told to go ahead after the Council acted; did you tell them to go ahead? A. No I did not tell them to go ahead, the Deputy Minister did.

Q. You know he did? A. Yes.

Q. You know that after the Order in Council he told them to go ahead? A. It must be that, because he would not do it before the Order in Council was passed, I am sure.

Q. Are you sure, or are you just thinking that he would not? A. I am sure that he would not.

Q. That is your opinion? A. I am quite sure about it.

Q. Are you prepared to take your oath that he did not tell them to go ahead before the Order in Council was adopted? A. That is a hard question.

Q. As a matter of fact do you know anything about that? A. Yes, I know my recollection and my impression that is left to me that as soon as the Order in Council

was passed they were told by the Deputy to go ahead, on pressure brought by the lumbermen, that the work was pressing.

Q. That is your recollection? A. Yes.

Q. And you don't think they were told before the Order in Council was passed? A. I do not think so.

Q. And you do not think that between November, when they say they were told, that the contract would be given to them, and the January 18th, when the Order in Council was passed, that they had assumed any obligation? A. I do not know that they did.

Q. Then, when you speak in your letter here, of the obligation to them, you knew nothing beyond the fact that they had been told a few days before to go ahead? A. Well, I take it as a question of honour, that having been told to go ahead with the contract; I take it as a question of honour with the Department to treat them well.

Q. Did you know as a fact that they had gone ahead and done something? A. I was told that they had given some orders; I do not know as a fact because I did not see any documents.

Q. Who told you that? A. I was told I believe by the Engineer.

Q. What engineer? A. Mr. Coutlee, probably.

Q. Mr. Coutlee told you they had gone ahead? A. I would not name him as a fact that it was him who told me, somebody told me, it may have been Mr. Coutlee.

Q. It may have been Mr. Coutlee and it may have been somebody else; have you any reason for believing that it was Mr. Coutlee? A. It might have been the contractors themselves too.

Q. You don't know who it was? A. Not exactly.

Q. Were you told when they had gone ahead? A. I could not say.

Q. Suppose it turned out that their action, whatever it was, took place before the Order in Council was passed, by somebody in the Department telling them to go ahead, would you still consider that the honour of the Government created an obligation to give them that contract? A. No, I based my recommendation on the fact that when the contract was given to them by Order in Council, and when we told them to go ahead before the contract was signed, that we were bound in honour to give them due and fair consideration after the changes were made.

Q. Provided they had gone ahead and incurred obligations? A. Yes.

Q. Or expenditures of their own, on the faith of that statement? That would put more weight to the obligation of the Department by the fact of telling them to go ahead.

Q. You mean to say that the mere fact of telling them to go ahead, whether they went ahead or not, created an obligation? A. Yes, I consider it a point of honour to give them consideration.

Q. Then you go on to say in the memorandum: "So long as these conditions are covered by the tenders." Now, the condition of building a concrete dam had not been covered by the tender had it? A. There was a price asked for concrete.

Q. How many yards? A. The yardage is not mentioned in the tender. I think it is memtioned in the schedule of prices.

Q. $8.50 per yard is mentioned? A. Yes.

Q. But in the tender, as submitted, that really referred to extra work did it not? A. It did refer to extra work or changes that they might make. We asked a price for concrete that is all.

Q. You had a price for concrete, but that price for concrete had been quoted, and as far as anybody knew at that time, it was intended to apply to the small amount of concrete which would be put in the wooden dam at the head of the island? A. I cannot say.

Q. I want to read you what the contractors themselves say on that matter, later on, to see if you contradict it? A. I do not know any of these details.

Q. You must know, as a matter of fact? A. No, I did not go into the details of the construction.

Q. But I am asking you this, when they quoted $8.50, the idea was that a wooden dam was to be built? A. Yes, that was in connection with the tenders for the wooden dam.

Q. Do not the prices and the lump sum taken together, show that the main construction of the dam was to be of wood? A. Oh yes.

Q. Does it not show that the amount of concrete was to be very small? A. I do not think there is any amount of concrete stated in the Engineer's estimates in connection with the wooden dam.

Q. Not in that estimate but you will find an estimate in which it was quoted; one of the tenders was from Mr. E. J. Rainboth of this city? A. Yes.

Q. In his schedule, he not only gave you unit prices, but he put in quantities? A. He put his own quantities.

Q. He was an engineer? A. Yes.

Q. And he would be making these quantities from the plans which had been made for the wooden dam? A. Well, there is no concrete on the plan.

Q. There is some in the specifications? A. I do not think so.

Q. How did you come to ask for unit prices if it was not shown? A. We often cover other contingencies in case we might need to put in concrete.

Q. Do you mean to say that when you were asking for prices for concrete for the wooden dam, you neither showed the concrete on the plan nor in the specifications? A. I do not think there is any concrete shown there.

Q. Mr. Rainboth, as engineer, in quoting two hundred yards, would have no foundation whatever on which to base that amount? A. No, there is nothing shown on the plan to my recollection.

Q. Nor in the specifications? A. Not to my recollection.

Q. And you would have to guess at the amount? A. I do not know; he might have thought in putting concrete to level off the bottom of the river where rock was shown that his cribwork would have a better setting, and he would have allowed for that probably. Of course these are contractors methods.

Q. I find that Lumsden put in a tender referring to the quantity as one thousand yards? A. Yes.

Q. And I find that Conroy and Kirby & Stewart did not mention the quantity, but I want to ask you this: You said that a comparison of the unit prices with the quantities showed that these parties in making up their bulk tender, had applied these prices to the quantities? A. Yes, to their own quantities.

Q. Bearing that in mind, don't the bulk prices show that all of them had figured on a very small amount of concrete? A. They did.

Q. The original plan contemplated a very small amount of concrete? A. They did figure on a small amount according to their figures there, but I am firm in saying that according to my recollection, there was no concrete shown on the plan and no concrete mentioned in the specifications.

Q. But the original plan, whether it may show that or not, contemplated only a very small amount of concrete? A. These are figures put in by the tenderers.

Q. I will put it another way—when the Department prepared the plans and asked for tenders for a wooden dam it was intended for only a small amount of concrete? A. I cannot say if only a small amount of concrete was intended, because there was none shown on the plan. Only the Engineer could answer that.

Q. Then you mean to say that when considering the price that had been quoted for concrete, and in deciding whether you should call for new tenders or not, did you not know whether the various tenderers had contemplated much concrete or little? A. We had the figures.

Q. I am asking this: You say that you don't know whether the Department had much concrete or little in its mind when it asked for these tenders? A. As far as we are concerned in the Department, I say there is no concrete shown on the plan.

Q. You have said that over and over again, and I ask you whether the Department in preparing the plans for the wooden dam contemplated whether there should be much concrete or little concrete, and you said you did not know? A. I know that for the concrete for the wooden dam there was no contemplation of a large amount of concrete.

Q. Why didn't you say that and save time—then the unit price quoted in the tender was in the contemplation of the contractors and the Department for a small amount of concrete? A. For the possibility of concrete being put in the work, for a small amount of concrete, there is no doubt about that. That is my impression, but I cannot say what was the intention of the Engineer.

Q. I am talking about the contemplation of the Department in building that wooden dam; now we will get down to what the contractors say. Here is what Kirby & Stewart say on December 29, 1910:

> "The concrete called for under the original plan was very insignificant in amount, and would not have required any forms, whereas, in the changed plan moulds had to be made for the piers and abutments, the expense for which was entirely unforseen when the contract was signed, and the placing of concrete in moulds, in piers twenty-five feet in height cost a great deal more than was estimated for the concrete work called for in the original specifications."

A. I do not know what they mean by the concrete called for in the orignial plan, because if there is any shown it escaped my attention entirely.

Q. I think you can understand it if you try hard—he says the concrete called for in the original plan. It may be that the actual plan or drawing did not call for it, but he is using the word plan in that relation, not as applicable to the drawing but in relation to the Department's conception of the amount of concrete it was going to put there and he pointed out that the amount of concrete was very insignificant and much less costly than it would be in the kind of work in a concrete dam? A. That would be right.

Q. Then, the amount of concrete work which was undertaken in the concrete dam, would be necessarily much more expensive than the small amount of concrete which would be needed in the wooden dam? A. Well, it would because I can judge that for a small amount of concrete like that it would be less expensive.

Q. Now we will come back to your memo.—I will ask you again, if the conditions surrounding the construction of a concrete dam were covered by the original tenders in your opinion. Did the original tenders cover the conditions which necessarily surround the building of a concrete dam instead of a wooden dam. A. No sir.

Q. They did not? A. No.

Q. Now, Kirby & Stewart are contractors whose head office is here in Ottawa? A. Yes sir.

Q. Have they ever been contractors for the Department of Public Works for other work? A. As to Kirby & Stewart I do not recollect them being contractors. I recollect Kirby furnishing some stone on contract price, I think for the Laurier bridge, of which I was in charge; he supplied some stone there for pavements.

Q. Then as contractors, as a partnership, this was the first work they had entered into with the Department? A. That is my impression.

Q. At the same time did they enter into other contracts for the Kippewa Dam? A. I think they tendered but they were not the lowest.

Q. You mentioned that Mr. Kirby was a contractor—had Mr. Stewart himself, or in connection with anybody else ever been a contractor with the Department? A. I know that Mr. Stewart is a contractor for dredging.

Q. He would be a contractor in connection with your Department for dredging? A. Yes, since that time. I did not know him at the time. I did not know which Mr. Stewart it was at the time.

Q. Was he not one of these parties that was connected with dredging contracts at St. John, New Brunswick? A. Yes, he is the same man that has got a contract under the name of the Dominion Dredging Company. They have contracts for dredging down at St. John, New Brunswick.

Q. And they have contracts for dredging somewhere else too? A. They are finishing at St. John and they have done some work at Quebec and in Nova Scotia.

Q. Were they not doing work at St. John, New Brunswick about the time of this Timiskaming contract, when some dispute arose about what is known as the McAvity contract at St. John? A. I cannot say if it was about that time.

Q. Do you remember the McAvity incident at St. John? A. Yes.

Q. And the McAvity's firm was getting some contracts there? A. It must not have been the same time. I cannot say because it did not come particularly under my notice.

Q. Mr. Coutlee has been, since you started on the concrete, and is, up to the present time the Engineer in charge of the work? A. Yes.

Q. He would necessarily be sometimes in Ottawa and sometimes on the work? A. Oh yes, he would go very often on the work.

Q. Then there would be an engineer in charge of the work directly? A. Yes, he stayed on the work all the time.

Q. What is his name? A. Mr. Donnelly.

By Mr. Lake:

Q. We have not got the advertisement here or the plans or specifications and we have no idea from these papers as to the procedure usually followed by the Department. I would like to know something of that procedure. When a work is decided on, plans and specifications are first drawn up, is that the case? A. Yes, then the appropriation is voted in Parliament. When it is sanctioned the engineers are asked by the Chief Engineer to prepare contract plans and specifications, after the Chief Engineer has prepared a list of all the appropriations and stated that his work is to be done by day labour, if it is repairs or small work or of such a nature, that the work should be done by day labour. Then it goes on the list of contracts as day labour. It is approved generally by the Minister. Then the Chief Engineer sends instructions to all the Engineers giving a list of all the contract work for which they have to prepare contract plans and specifications. These contract plans are prepared at the different Resident Engineers' offices, Halifax, St. John, Quebec and so on, and they are sent to the Chief Engineer, and if he approves of them the typewritten copy of the specification is forwarded to the Deputy Minister of the Department. Then the plans are transferred by the Chief Engineer to the Chief Draughtsman for comparison with the specifications as to whether there are any mistakes, and a number of plans are printed while the specifications are sent to the Printing Bureau to be printed. These come back and the Deputy Minister gives an order to prepare a list of papers for advertising when everything is ready and this list of slips for advertising is sent to all the papers and they advertise it. We generally give from three to four weeks for tenderers to go on the ground and visit the work. Then the tenders are received.

Q. Before that, I presume, the advertisement is read by the would be contractor, but it simply tells him that plans and specifications are to be obtained at the Department? A. It says that the plans can be seen at the Department of Public Works and Resident Engineers' offices where they have been prepared, and if there is no Resident Engineers' office there, they are to be seen at the post office of the locality, where the work is to be done.

Q. He does not get a copy of the plans and specifications? A. No, except in special cases. When a contractor is in a hurry and wants to go away, the Minister would permit that a plan be given him on which he could calculate the quantities.

Q. Then, the man who is intending to tender, would go to the Department of Public Works and see the plans and specifications in the office? A. Yes, they all come to the office or wherever they are exhibited; we exhibit in three or four places.

Q. If the details are not clear to him, is he allowed to ask questions? A. Yes, the Chief Draughtsman is there to answer all the questions, and if the Chief Draughtsman cannot answer, well the matter is referred to the Engineer who has prepared the plans, for the information that is not very clear.

Q. This information is given by the Chief Draughtsman and at various times as the tenderers happen to come in? A. Yes.

Q. And he may give information to one man quite in excess of what he may give to another? A. Well, he simply answers what they ask. In his information he would give, for instance, asking about the meaning of such a clause, and the meaning of such a detail on the plan.

Q. Is it possible that in connection with this work that any one of the contractors may have asked the Chief Draughtsman whether it was intended that the awarding of the contract be with reference to a bulk sum contract? A. It may have been possible that some contractor asked that.

Q. And that he might have told one of them, who happened to ask that question, no, it will be based on the unit idea? A. It may have been possible if he was asked that question.

By the Chairman:

Q. At least the method is open to that possibility, the answer being given verbally and not in writing? A. Yes.

By Mr. Lake:

Q. One tenderer would have known that you were going to decide this question on the basis of a unit tender, while another would have believed that it would be decided on a bulk tender? A. Yes, but whether that would make a difference in his tender I cannot say.

Q. Now, if I am tendering for a work, on a bulk sum, would I not put in a considerable sum in excess for unforeseen expenses; would I not put that in to a greater extent than if I was going to be paid as I went along? A. If he tendered on a bulk sum, he puts in a certain percentage to cover contingencies. If he calculates on unit prices, the percentage is generally covered by unit prices. He can increase his unit prices so as to cover certain contingencies for each class of work.

By the Chairman:

Q. But the contingencies in unit prices wherever they are specified would be very much less than the contingencies in the bulk price? A. I do not think so because in the bulk price he had to cover the same contingencies, the same unforseen difficulties, the same cost for his staff and supervision.

Q. No, because when you are following along a work which happens to be more than was first thought, and you have a unit price for it, the quantity of the work is not a contingency because it is provided in the unit price and the more the work the better for him, but in a bulk price it may not be so? A. In both cases he had to cover the same contingencies whether he had a bulk sum or a unit.

By Mr. Lake:

Q. The contractor in this case may have it in his mind that some accident might occur in the course of construction on the work, and which, in fact, did occur. In

making a tender for a bulk sum, would he not provide for that contingency? A. They do provide to a certain extent but they take mighty risks sometimes.

Q. On the other hand the contractor who was merely contracting at unit prices need not take that risk into account at all? If part of the works were carried away he would simply go on replacing them, and be paid at the same price for replacing? A. If it was auxiliary work required in the main work the unit prices would not cover that. For instance, if he is obliged to build up staging to carry on his work he has got to cover that in his unit price just the same as tendering in a bulk sum. The staging would not be paid under the unit price. The auxiliary or necessary work to carry on his operations are not covered by the unit price. The unit price includes only the quantities in the work itself. If they do staging or piling to enable them to carry on their work, they are not paid for that, except in so far as it is included in the unit price or in the bulk sum. We do not pay separately for that.

Q. Then, under the heading, you include the unwatering? A. Yes, unless there was an item for unwatering.

Q. Then finally, you have no certainty that one contractor does not get better information than another in connection with the same specifications? A. They all get the same information.

Q. Then, when the advertisement calls for a tender for a bulk sum, one may get better information by saying: Are you sure this is for a bulk sum, is it not possible that it was intended for a unit sum, one man may get better information by saying: are you sure this is for a bulk sum, is it not possible that it was intended for a unit.

The CHAIRMAN.—The witness can very well swear to that because it is an obvious infirmity of the situation. If you gave written information, everybody would get the information alike, but if you are relying on verbal information, it is possible that everybody would get different information. The witness does not know anything more about that than we do and we know it is an infirmity attached to verbal information.

By the Chairman:

Q. We have just been talking about the price for concrete in connection with the small amount needed in the wooden dam and I just read to you what the contractors Kirby & Stewart said about the actual value of concrete work. Now, when they were asked whether they would enter into a contract for the dam, did they raise any objections to your knowledge concerning the cost of concrete per yard? A. Not to my knowledge, sir.

Q. They made no objection, so far as you know, to going on with the new dam at the price for the concrete? A. No.

Q. On December 29 the contractors say this: "The work contemplated when the tenders were called for was completely and entirely changed in character and location." A. What they mean there is that later on——

Q. When they signed their contract I suppose? A. No, he means to say that there was, as a matter of fact, an entire change in the character and location of the dam, between the time that the first tenders were called for and when the dam was being built, and that is so. That is a fact.

Q. Is that a fact. They also say in the same letter: "The proportion of excavation to the whole work has been enormously increased, partly owing to the greater depth of the water and partly owing to the much more expensive foundation required for the construction of a concrete dam of the character called for in the amended specification." They say there was a greater depth of water in the changed location, is that a fact? A. I cannot say without comparing the plans. The Engineer will be able to say so.

Q. The location, which was originally at the head of the island, was changed down the stream to be about the middle of the island? A. Yes.

Q. And, by the way, on the plan it is shown as crossing the island, have you ever seen the work yourself? A. I have been there once and have seen the island and the embankment itself.

Q. Is that of concrete? A. No, just filling.

Q. The island is never flooded with water? A. I don't think so.

Q. They say: "The much more expensive foundation required for the construction of the concrete dam" what do you understand by that? A. Well, they found that instead of hard material they had to deal with sand and they had to go deeper than anticipated.

Q. Pardon me, that is not what he speaks of; he is speaking of the more expensive foundation required for the construction of the concrete dam, in the very nature of such a dam. He goes on afterwards to speak of the condition? A. The deeper they go, it would be the more expensive for concrete than for wood.

Q. And further, if you were laying down a small amount of concrete in connection with a wooden dam you would not have the great quantity of unwatering work in that dam that you would have in a concrete dam? A. I don't think the Engineer expected to go very deep in the first wooden project.

Q. And the contractors say: "In addition to the actual excavation required, we have been called upon to remove a large amount of material from the western channel for the purpose of improving the waterway, apart altogether from the construction of the dam."—What difference would it make in that relation, whether the amount were large or not, if they were getting a unit price, what do they mean by that? A. There was part of the channel on the Ontario side that they had to excavate apart from the dam itself, in order to have the water as at low water there and relieve the other channel of the heavy current. There was shown on the plan a channel to be excavated by them there.

Q. And they say further: "No indication was given of hard pan where boulders were indicated to exist, and the prices were fixed for boulders and not for hard pan." A. Well the Engineer has always reported that it was not hard pan there. He did not find hard pan.

Q. Was it found there as a fact? A. I do not think it was found there, as a fact. Mr. Coutlee will confirm that.

Q. And so far as you know that cause of complaint did not exist? A. They did not find any hard pan.

Q. On February 3, replying to the Auditor General's argument, you say you agree that were it not for special considerations such as the urgent need of commencing the work without delay, new tenders would be asked for—Now, what work that could be commenced without delay could be undertaken at that time of the year on the concrete dam. You are urging that without waiting for new tenders the contract shall be given to Kirby & Stewart. What could Kirby & Stewart do at that season of the year which made it urgent to go on with the work without asking for tenders? A. They could go on at once excavating on the Ontario side which is dry at low water. The low water lasts until April and we have high water then and we have a period of several months in which the work could not be touched.

Q. Now did they go to work at once? A. I cannot say.

Q. Don't you know that they did not go to work until June? A. They delayed, I know they delayed.

Q. They did not go to work, as a fact, until the following June? A. I am not positive as to whether they did any excavation or not, but I was in good faith.

Q. I am not questioning your good faith—I am asking you now, before they actually went to work there was abundant time to get new tenders? A. Yes, as it turned out.

Q. On December 22, 1908, you had written the following to J. R. Booth, Esq., Ottawa:

"It is an utter impossibility now to have the dam built this winter and the contractor will not take the risk of commencing the actual work of construction." A. The actual work of construction meant the dam itself, but there was lots of excavation that might have been made.

Q. Did the contractors Kirby & Stewart agree that they would do any work that winter? A. I cannot say whether they did or not.

Q. Do you know if they agreed to do anything? Did they say they would? A. Not to me.

Q. Or to anybody else as far as you know? A. Not so far as I know.

Q. As a matter of fact, in February, you had decided that new tests had to be made and new plans and specifications, and you ordered them to be made? A. Yes, I was under the impression that it would not take very long at the time.

Q. But you soon found out that they would have to make new tests, because you had looked at the plan of Mr. Perreault and you had seen that the bottom was not indicated with certainty and you knew that would have to be examined into? A. Oh yes, for a concrete dam it was wise to do so.

Q. Now, sometime or another you expected you would be in possession of further information and of plans and of specifications? A. Yes.

Q. And you expected that to be pretty soon? A. Yes.

Q. Then, why could you not have waited until that work was done and then got your new tenders? A. I did not expect such difficulties to turn out as did turn out and then the lumbermen had been pressing the Department to go ahead with the work for a long time, and it had been dragging, and in good faith I tried to hurry up the work as best I could.

Q. And you say that something may have been done in excavating the channel? A. Excavating the site of the dam.

Q. And nothing could have been done in the way of cofferdamming or actual construction until after the spring freshets? A. That was my opinion although the lumbermen said there was time.

Q. In December they said so, but I am talking about February. You knew that the actual work of construction and cofferdamming could not be done until after the spring freshets were over? A. Certainly that was my opinion that nothing practical could be done.

Q. So that when it was decided to go on without asking for new tenders it was apparent that outside of a certain amount of excavation, nothing could be done until the water went down next summer? A. I would not put it that nothing could be done. Preparatory work could be done.

Q. What kind? A. In the way of commencing excavation.

Q. I said that with the exception of excavation nothing could be done until the water had run off? A. No.

Q. Now, when you were speaking a moment ago, about this moral obligation to the contractors, outside of the fact that they had been told that the contract would be given to them, did you know that they had entered into any financial obligations for the work? A. That was my impression but I did not know it positively.

Q. Did you find out positively? A. No, I did not, I do not think I tried to go into their financial arrangements.

Q. When you were contending by argument with the Auditor General against calling for new tenders you did not know of any financial obligation by the contractors? A. Well, I did not know positively. But I was firmly of the impression that they had given orders for some materials.

Q. Some timber? A. Some timber.

Q. They say so themselves; Could not that timber have been taken off their hands and paid for? A. It could certainly.

Q. It would have to be used by anybody who built the dam? A. Yes.

Q. And if the Government assumed it and paid them for it, any new tenderer who built that dam could have taken it and used it? A. Yes, it could have been used.

Q. Consequently, the moral obligation, so far as it depended on their financial obligations could have been met by simply assuming these obligations? A. Yes.

Q. So far as it was based on the financial obligations they had undertaken, it could have been met by assuming these financial obligations? A. It could have certainly. There might have been some trouble in settling with them.

Q. Was the opinion of the Department of Justice asked at that time, so far as you know, concerning the validity of the objection of the Auditor General? A. Not that I know of.

Q. You knew that the Auditor General was objecting. In his letter he says:

> "It is fair to assume that the items and figures are tendered for extra work. To get a more permanent structure it is now proposed to change the plan from timber to concrete, thus eliminating much of the timber and increasing the concrete three-fourths. If the question of the public interest to speedy completion is not raised I do not think the proposed precedent is a safe one to establish when the specification has been so radically altered."

Refering to the timber which might have been ordered, he says:

> "The timber part of the work could proceed at once while plans and tenders are preparing for the concrete dam, to be let on a second contract to builders of experience in that line who would take the timber as supplied to them and have it put into their own structure."

You say that so far as you know, the opinion of the Department of Justice was not asked at that time? A. So far as I know I do not remember anything about that.

Q. About two years later, upon the decision having been reached to pay the extra sum to Kirby & Stewart, and the Auditor General objecting to that, the Deputy Minister of Justice was asked for his opinion? A. Yes, by the Deputy Minister of Public Works.

Q. Now, I find that your letter of February 3, to the Deputy Minister, covered by a memorandum from the Deputy Minister to the Minister, dated February 4, was considered, and that the Deputy Minister's memorandum is marked "approved W. P." meaning the Minister, Mr. Pugsley? A. Yes.

Q. And that the recommendation to Council dated February 11th, was ordered to be prepared. In the memorandum from the Deputy Minister to the Minister, reference is made to the objection of the Auditor General and it is overruled by the Minister's approval. On the 11th March the Committee of Council acted on the memorandum from the Minister dated 20th February and approved of the construction being of concrete; you remember that memorandum of 20th February? A. I remember that memorandum about the concrete dam, yes.

Q. Did you take part in the preparation of it? A. I think it was based on some of my memorandums.

Q. Do you remember seeing it before it went over to the Council? A. I am not sure, I must have seen it but I am not sure.

Q. I observe that in that memorandum no mention is made of the fact that the Auditor General had objected to the legality of the whole transaction? A. To change to concrete instead of the other.

Q. Yes, no mention had been made of the Auditor General's objection, or of the discussion between you and the Deputy Minister and the Auditor General? A. The Auditor General objected to the contract being given without calling for new tenders.

Q. In the memorandum to Council that is not mentioned as a fact? A. I suppose not.

Q. Can you give me any reason why Council was not informed of this written objection by the Auditor General? A. I cannot say.

Q. The Council would not be in possession of all the information about the matter unless it was informed in the memorandum or by the Minister? A. Well sometimes the memorandum of the Engineer or my own memorandums are attached. I cannot say if they were attached in this case.

Q. In case of attachment I suppose the memorandum would refer to certain documents as being attached? A. Yes.

Q. There is no memorandum of that kind here and therefore Council would not know of that objection except it heard it verbally through the Minister? A. That would be the only source.

Q. In that memorandum dated February 20th the Minister uses these words, referring to the four tenders received for the wooden dam:

> "The tenders above mentioned, in addition to bulk sum prices give the unit prices for each class of material, including cement, and applying these prices to the approximate quantity of material in the work, the amount of various tenders for the construction of the dam of concrete, would be as follows."

I want to draw your atention to the peculiar wording of that; he says:

> "The amount of the various tenders for the construction of the dam of concrete."

There had been no tenders for the construction of the dam of concrete? A. There had been no plan at the time, only the quantities obtained from the Engineer.

Q. I am taking these words because they may be misleading, on February 20th, and afterwards there were no tenders for the construction of the dam of concrete, were there? A There were not at the time.

Q. Was there ever any such tender? A. Only for the concrete included in the first tender.

Q. Then the Minister's memorandum uses this expression: "Messrs. Kirby & Stewart's still remaining the lowest tender on the altered condition."—Your last answer applies to that: there was no tenders on the altered conditions? A. Altered conditions" mean there the change from wood to concrete.

Q. There were no tenders on the altered conditions ? A. There were no tenders on the altered conditions.

Q. There were tenders in which a unit price had been mentioned for some cement and that might be applied by the Minister to a greater quantity of concrete, but no tenders were ever received for such. A. No tender was ever received.

Q. And therefore this language might create a wrong impression ? A. I do not know. The cribwork was simply replaced by concrete and calculated at their own price.

Q. Now we come to another question—in the unit prices given in the four tenders received there is a very great uncertainty in the matter of unwatering. That phrase unwatering has been assumed all along to cover cofferdamming? A. Cofferdamming and pumping.

Q. And included within the word "unwatering."? A. Yes.

Q. Both would be necessary to unwater the stream? A. Yes.

Q. I find, for instance, that Kirby & Stewart put a bulk sum, it is called in the schedule, of $4,000? A. As a unit.

Q. They call it bulk? A. Yes.

Q. Conroy & Conroy put $20,000. Rainboth puts $15,000 and Lumsden puts $54,994. Now, I furthermore find this in your letter dated February 9:

> "Moreover a great factor in the cost of concrete in the case of dams is the cost of coffer damming required, which in a difficult location may raise the price of concrete to much higher figures than those given. Coffer dams will be required at Timiskaming, and unforeseen difficulties in unwatering may be

encountered. Therefore, I have no hesitation to state that $8.50 per cubic yard "is fair and reasonable."

Now in using that language your are assuming that $8.50 per cubic yard would cover the cost of coffer damming and unwatering? A. Would cover the cost of unwatering and coffer damming within the view I had at the time of the difficulties that might be encountered, but these difficulties have gone much beyond our expectations. I must be frank about that.

Q. Now, $8.50 quoted by Kirby & Stewart, per cubic yard, at that time did not cover the cost of coffer damming it? A. It turned out it did not.

Q. Now I find that the Minister in that memorandum of Februray 20th, uses this language—I confess I don't understand it myself but perhaps he did—after speaking of the change to concrete in order to give a permanent character and reduce the cost of annual maintainance of the dam, he said:

"Moreover a great factor in the cost of concrete in the case of dams is the cost of coffer damming required, which in difficult location may raise the price of concrete to much higher figures than those given. Coffer damming will be required at Timiskaming, and unforeseen difficulties in unwatering may be encountered."

He practically uses your own language there. Then he goes on to say:—that applying $8.50 per cubic yard to the quantities of concrete that were estimated at that time Kirby & Stewart's would be $108,050 and advises the acceptance of the tender. Now, does not that imply that the cost of unwatering, including coffer damming and unwatering, would be included in the $8.50 that was to be paid to Kirby & Stewart? A. That was implied at the time plus their $4,000.

Q. Will you kindy look at this Mr. St. Laurent,—there is a memorandum called "Original Quantities for Concrete Dam," who prepared that table? A. I did.

Q. The document entitled "Original Quantities for Concrete Dam." is made by you, and it gives a total which indicates a dam largely built of concrete, and the total of the tenders were quoted in the Ministers memo. dated February 20th. Now, when you quote the figures of other tenders, to show how much the concrete dam would cost if they built it, you put in the original amount they had suggested for unwatering? A. Yes.

Q. So that Lumsden's figures for the concrete dam amounted to more than Kirby & Stewart's, largely because Lumsden put in $55,000 for unwatering and Kirby & Stewart only put in $4,000?. A. Yes.

Q. As a matter of fact, Lumsden's figures for concrete were fifty cents a yard less than the other man? A. Yes.

Q. And it is only by adding the cost of unwatering to the cost of the concrete that you make Lumsden's higher? A. Yes, on the items mentioned there.

Q. On March 19, 1909 I find that the contractors were notified:

"Your price for concrete per yard, as stated in your tender, and the sum mentioned for unwatering is to cover coffer damming which you may require to build the dam? A. Yes.

Q. So that they were informed in writing that they were to get that much for building the dam? A. Yes, we did not want any misunderstanding.

Q. The contract with Kirby & Stewart which is signed in June, 1909, provided, in accordance with that notice, that the coffer damming was to be included? A. Yes, I do not know if that was actually put in the contract, but that is the notice we gave them, so that there would be no misunderstanding about it.

Q. You do not know that these precise words are in the contract? A. No, but I remember the letter.

Q. Have you the actual contract in your Department? A. Yes it is in the office of the law clerk.

Q. When you come back as a witness the next time I wish you would bring the contract? A. Yes.

By Mr. Lake:

And bring the plans and specifications also? A. Yes.

(The witness later produced the contract with Messrs. Kirby & Stewart, of date July 22, 1909, attached to which are the specifications. He also produced a copy of the amended concrete plans.)

By the Chairman:

Q. Going back to the time, in the early part of 1909, when you were considering the question of tenders for the concrete dam, there would be frequent conversations with Kirby & Stewart? A. Before they signed their contract, I don't think I met them more than once or twice; I never saw them very much.

Q. When in the winter time, you were getting ready for that minute, which went to Council advising that Kirby & Stewart should be given the contract for concrete, on the basis of the figure in the original tender, they must have been consulted then, I suppose? A. They used to call on the Deputy Minister, and I think I was called in once or twice.

Q. They used to call? A. Yes.

Q. The point I want to get at is this:—do you personally know whether the other tenderers were told that the Department were considering the construction of a concrete dam in place of the other, and had before them the tenders that had been put in for the old dam, and asked these others if they would like to go on and build the concrete dam? A. No sir, only the lowest tender was considered.

Q. And they were never discussed with at all? A. Not with them; their tenders being higher than the lowest they were put aside.

Q. They were never given a chance whatever to come in and say whether they would modify or not in view of the large concrete structure that was contemplated? A. No.

Q. Or communicated with in any way? A. No, of course I am speaking so far as I am personally concerned.

Q. On December 13, 1910, Mr. Coutlee made a report to you in relation to the Timiskaming dam; do you remember that? A. Yes.

Q. On that same day, Mr. Coutlee addressed the contractors a letter which is marked 'approved W. P.' He says:

> "I am instructed to say that the Department will extend the time to June 30, 1911, if your company will give an assurance that the work will be pushed during the winter by the employ of increased force, and overtime work."

You were aware of that letter? A. Yes, we were trying to get them to move and take some steps to finish.

Q. The letter of December 13, from Mr. Coutlee to you being dated the same day as that letter to Kirby & Stewart, would probably be the subject of consideration on that day? A. Well on days previous there would be discussion. I may tell you what happened in this connection. Kirby & Stewart one day, called on the Minister and I was called in and they represented to the Minister that they were losing money, that they could not carry on their work with the prices they had, and they brought up the question of increased prices on the excavation. They complained about unfair treatment in the classification of the excavation, that they should be paid more, that what they were paid for at the rate of fifty-five cents for common earth they should be paid for boulder formation, which was about $1.40. They had three prices for

excavation. They represented that they were unfairly treated by the Engineers in the classification, that they were losing money all the time, and so the Minister called me in and asked me to look into the matter. I called in Mr. Coutlee and we had several discussions together and finally reported to the Minister that nothing could be done about the classification, that they had been fairly treated, and their prices were right, and that they could not be paid any more than they had been paid for excavation. This was the result of several discussions with the Engineer, but in considering the matter the Engineer reported that there was a question of unwatering on which they had an expenditure so much in excess of their tender price for unwatering, that that was a fair matter for consideration. Then I was asked to consider the matter in equity and I obtained some reports from the Engineer at the time and a recommendation was made for consideration for the unwatering. We did not recognize their claim for further money on excavation.

Q. The matter began then in the contractor making a claim on the Minister verbally? A. Yes, they were there and I was called in.

Q. Who were there with the Minister? Were they alone then or did they have somebody with them? A. There was Mr. Kirby and Mr. Stewart, and there might be the private secretary, I cannot say.

Q. You were called in and discussed the matter? A. Yes, and the Minister referred the matter to me.

Q. Then, the letter from Mr. Coutlee to you was prepared after the discussion had taken place? A. Oh yes, the matter had been discussed.

Q. And this letter to you was a letter that was prepared in order to pave the way for the recommendation that you were going to make for coffer damming? A. Yes, we were asked in equity if they were entitled to further consideration.

Q. This is not a letter that emanated voluntarily from Mr. Coutlee to you in the course of his duties, but one that he was asked to prepare because you were considering the matter of paying them more money? A. Because the matter was brought to the attention of the Minister.

Q. That is, that they wanted more money? A. Yes, they had a claim.

Q. The letter, in other words, was prepared in order to provide a way in which to give them more money? A. I would like to be fair to Mr. Coutlee. Mr. Coutlee would not report anything that he did not want to report.

Q. I am not aspersing your motive at all at present, but the contractors having represented that they were losing money and your Department having cast around for some way you could allow them more money, agreed that in your view the equity of the thing struck unwatering and coffer damming. A. We were not casting around. The contractors had made their claim, and we considered the thing item by item.

Q. But you could not give them any more on some of the claims? A. There were some of these claims which we could not allow anything on, and there was the unwatering and the Engineer said that the cost of unwatering was going so much beyond what the contractors had expected and what the engineers had expected that there was this fair matter for consideration. Then we asked him to make a report.

Q. Quite so, Mr. Coutlee did not voluntarily, before he was invited to do so, report that they ought to have more for unwatering? A. No it was they who brought the attention of the Department to it.

Q. And you personally did not look into or report upon giving them more for unwatering until they had drawn attention to it? A. No, though I was aware they were meeting difficulties.

Q. And neither was this report provided about the watering until you had decided they had no just claim for excavating? A. No it was considered at the same time.

Q. Then Mr. Coutlee was instructed to prepare a report upon this point, and the report of December 13 was the result? A. That is the usual practice followed

when a claim is brought to the notice of the Department; the Engineer always asks a report from the Engineer in charge.

Q. But it does not appear from what you have said, that these men commenced to make a claim on the ground of unwatering; they started to make a claim on the ground of excavation? A. That was one of the items.

By Mr. Lake:

Q. They asked for the other consideration later on? A. Yes.

By the Chairman:

Q. Now then, that letter of the 13th was not immediately acted upon apparently by the Minister and was not acted on until the 4th of January, the next month? A. I cannot say what time elapsed.

Q. Anyway, before it was acted upon, there is a letter from Mr. Coutlee to Kirby & Stewart, telling them to go ahead rather than giving them any extension of time? A. An extension of time is usually granted in order that their contract may not be void.

Q. Then it was granted for that purpose. Looking then at Mr. Coutlee's letter of the 13th December, I find this statement:—

"The contractors began work in June, 1909, but only signed the contract on the 22nd July, 1909". I find in another place the statement made that they had their material bought in June, 1909, and I find in another place that it was on the 12th July, 1909, that the Engineer handed over the plans and specifications, ten days before the contract was signed. Now, who authorized the contractors to go on the work and commence operations before they had actually signed the contract? A. That was in virtue, I presume, of that general authorization they had from the Department to go ahead.

Q. Is it not a statutory provision that work shall not be begun by the contractors until the contract had been signed? A. There must be something to that effect I think, but there are exceptions.

Q. Don't you remember that there is an express statutory provision that work shall not be begun by contractors until the contract has been signed? A. I do not remember having seen it, my impression is that there must be something of that kind.

Q. Then it goes on to say: it was after the second Order in Council (that is the one which authorized the change from wood to concrete on the 18th May, 1909,) that the present location of the Timiskaming dam was adopted, and the contractors visited the site with their manager before the first of May; their plant was on the the work about the end of May; the general and detailed plans were completed in June; it will be seen from the above that a very considerable change in the plans was adopted after the second Order in Council. Now, did the change in location naturally increase, not only the amount of work which had to be done but the value and cost of the kind of work that had to be done, so that men being paid at unit prices on one location, would not be fairly paid by the same unit prices on another location? A. I don't quite understand the difference.

Q. Mr. Coutlee here is arguing in favour of some allowance to the contractors, some equitable consideration to the contractors upon the ground that after they were given the contract the location was changed, and by that change was made more expensive for them to do as well as more costly for the Department to pay for? A. Well I believe that the depth of water and the current in one of the channels must have been greater than where the dam was located before.

Q. So that the change in location would have a marked effect upon the expensiveness of the work? A. I believe so, not in all cases, but in that case anyway.

Q. Was that change in location ever brought by any memo. with which you are acquainted to the attention of the Privy Council? A. Well I think it is mentioned in some of the Orders in Council, is it not?

Q. Now, such a mention would be absolutely necessary in order to apprise the Council of the greatly increased cost of the work, would it not? A. Oh yes, such a change should be mentioned, if it was not mentioned it was an oversight, because I believe I mentioned it in some of my memos.

Q. The minute of the 24th January, 1911, in which it was proposed to assume the coffer damming of the Quebec channel from the contractors and pay them for it and a percentage of profit, appears to be the first mention in any of the memos. or minutes of Council of the change in the location? A. I cannot say as to that.

Q. You say it should have been mentioned? A. There was no reason why it should not have been mentioned.

Q. Well, this letter from Mr. Coutlee was followed up by a long account, from the historical point of view, in the form of a letter, dated the 29th December, 1910, from the contractors, Kirby & Stewart, to the Minister of Public Works. It is a long typewritten document of seventeen pages, do you remember of having seen that? A. Was it their claim.

Q. Yes; do you remember having seen that? A. Yes, I remember, the first time when they came to make their claim verbally and we started to discuss the matter, I said you should put in your claim in writing, and probably that was the outcome of it. They just had at the time a few notes, and I said you should put in your claim and state your reasons for claiming in writing.

Q. In that letter I find that the claim they put forward is:

"We respectfully request that your Department will assume the expense of unwatering and excavation yet to be done." I should gather from the tone of that and comparing it with Mr. Coutlee's letter and what you have told me, that they had been by that time apprised of the view of your Department that they were not entitled to anything more for the excavation they had done, but that they might have the sympathy of the Department in any claim for unwatering and coffer damming? A. I think they state there for extra excavation.

Q. No, they say, for any further excavation still to be done? A. They wanted a higher price for excavation than they had been getting, and after a good deal of consideration we did not think they were entitled to any more, and that their prices were fair, but the unwatering, we were convinced by the report of the engineer that that was a thing that was gone so much beyond the expectations——

Q. You told them that? A. I do not think I told them that at the time.

Q. You think they were told? A. I do not know, I did not tell them myself.

Q. The reason why I am putting that question to you is this—in their letter dated 29th, they do not wind up by asking to be paid any better price for excavation which they began with verbally, but they wind up by asking that they be paid for the coffer damming and unwatering at the cost, not the price, of the excavation still to be done. Does not that letter indicate that they had been told what the views of the Department were, and they were writing a letter to assist in that? A. Not necessarily, because they were told that these matters would be taken into consideration and they would be fairly treated. That is all they were told until the recommendation was made.

(The witness here produced a negative of the original plan prepared under Mr. Brophy for the wooden dam and in reply to the Commissioners stated that he would have proofs of it made.)

By the Chairman:

Q. On the 4th January, 1911, the Minister submitted the memo. to the Committee of the Council, and the Council acted on that memo. on the 24th of January, and it is the memo. in which the Minister recommended that the contractors were entitled to consideration on account of the greater amount of coffer damming and

unwatering required, and that therefore all the cost of coffer damming and unwatering to complete the dam across the Quebec Channel, plus fifteen per cent for incidentals, &c., should be paid to them by the Department? A. Yes actual cost plus fifteen per cent.

Q. As reasons for that memo. he refers first to the dicision to change the site of the dam and alter the plans, but that was a decision which was made before the contract which Kirby & Stewart had signed. There were no changes made after the contract was signed? A. I cannot say there was a change of location after the contract was signed; the change in location developed during the studies made by Mr. Coutlee.

Q. And the larger amount of work involved in the change was on account of a change which had taken place before the contract was signed at all? A. Yes, and after the contract was signed they found that there was much more work than they expected according to the new plan.

Q. Then I find this expression that the tenders received, based on the amended quantities and unit prices submitted—and I want to point to the peculiar language there—the tenders received were not based on the amended quantities, were they? A. Well, as to that—

Q. I am asking you what the language means; that the tenders received are based on the amended quantities and unit prices. There were no tenders received based on the amended quantities? A. No.

Q. Knowing what I do now, I can guess what might have been meant, but I am taking what the language would mean to a person who did not know the whole history of the thing. I find further expression: "The Engineer reports that the contractors have so far executed their work in a first-class manner and have shown good will to meet the changed conditions." That statement is made on January 4, 1911. Now on the 12th of the previous December, the Engineer on the work reported to the Chief Engineer that the outcome of the waste of time in 1909 was serious? A. There is no doubt that there was some time wasted for certain reasons that I do not know. We kept after them all the time and they were always willing to go ahead and to put more men and more material, and then they would bring more men there and the men would leave. They had awful trouble with labour.

Q. I find this statement made on February 24, 1911, just a few days after that memo. from the minister. This statement is made by Mr. Coutlee to yourself in a letter:—

> "Mr. Donnelly has been trying his best to direct the work at the Timiskaming, as the Department is paying for the extra coffer dam work. The contractors, Messrs. Kirby & Stewart are never on the work themselves, and never have been. Their negligence amounts to a breach of faith with the Department, as it is a critical phase of the operations, and I wish to protest emphatically."

Then I find him writing to Kirby & Stewart, the contractors: "The conditions of your contract at Timiskaming is ridiculous and amounts to a breach of faith with the department." That meant a breach of faith for what? A. For not pushing their work as desired.

Q. Now, this letter dated the 24th February, must have referred to the work which had been done, or left undone over a considerable time, did it not? A. It must have been referring to work which they had attempted to do and which was not proceeding in a satisfactory manner.

Q. But this is very strong language. It not only says there have been delays but it says it is ridiculous and he says more than that, that it amounts to a breach of faith. I do not know that I ever saw more pointed language used to contractors in my life? A. The breach of faith means that they had promised us to take all steps necessary to go ahead and get the labour and appliances.

Q. Furthermore, it says that the contractors themselves had never been upon the work? A. I do not know anything about that.

Q. Does not that mean to say that they have neglected their duty? A. If they had not been on the work they certainly did neglect their duty.

Q. I am drawing your attention to this, that while you are using in the department between yourselves and the contractors such language as that, the Minister is reporting to the committee of Council, in order to induce the committee of Council to give the contractors more money, that the Engineer reports that the contractors have so far executed their work in a first-class manner and have shown good will? A. Yes, the work they executed was certainly first class, I have seen it.

Q. Were they showing their good will by neglecting the work? A. I remember Mr. Coutlee telling me that they were always ready but they didn't take the proper steps or they met with such difficulties that the results were not the same as desired by the Department.

Q. I have pointed this out to you—the Department is endeavouring to get the approval of Council to a large sum of money being granted to the contractors, additional to their contract, and you can see the council knows nothing except what is represented to it from time to time in writing, and in the writing it is said that the contractors are executing their work in a first-class manner and showing good will? A. Yes.

Q. Now, is that statement to Council fair to Council, when your department is using such violent language to the contractors about the way they are neglecting their work? A. Well, for their delay. The work they did was excellent, and I think the Engineer will tell you that.

Q. Does not the memo. to Council omit any mention of delay on their part; it naturally was serious was it not? A. That delay was very annoying.

Q. Was it not very serious? As a matter of fact was not the coffer dam a short time afterwards all swept away out of the Quebec Channel? A. Part of it was swept away.

Q. That would not have occurred if the dam had been built in the previous summer? A. They had no time to build it on account of the difficulty in coffer damming. We expected they could, but they built their coffer dam and they tried to unwater for two or three months and they could not get the coffer dam dry so as to start the men down.

Q. What breach of faith had the contractors been guilty of? A. I cannot say exactly what Mr. Coutlee meant by the words "breach of faith" but as I understand they had promised to do their best and carry on the work to completion, but it was not done in the end.

Q. Were they blameworthy or not? A. I do not know about that. The difficulties were such I do not know that they are to blame entirely for the delay. They certainly did delay, there is no doubt about that.

Q. In that Minute of the Minister to the Council is the Council properly apprised of the fact you have just sworn to, that there had been grave delays for which the contractors were responsible? A. This might have been mentioned but it is not usual to mention all these details.

Q. Furthermore, in consequence of the delay, and therefore of the season, the building of the coffer dam across the channel became more expensive, you had to house it and heat it in the winter time? A. We made the arrangements to house the concrete if it had been done, but they did not do it.

Q. If it had been done in the summer time there would have been no need of housing and heating? A. No, but there is no chance to do it all in the summer time, because the season is too short.

Q. Might it not have been done much more rapidly than it was done? A. That is a fair question to ask but it is very hard for me to answer on account of the

difficulties that have been encountered. I blame the contractors for delays time and time over again, but I am aware of such difficulties now that have been encountered, that I wonder if I was right to blame it all on them.

Q. We will put it this way; whether they were to blame for the delay or not, the long delay that had in fact occurred or the slow progress in getting the coffer dam and the dam across, was making it much more expensive and difficult work for winter? A. Yes, for winter work it would be much more expensive.

Q. No matter who was to blame? A. Yes.

Q. Now, then, in considering whether the contractors should be relieved or not, the most important question in equity would be whether they were to blame for the delay, or whether it is unavoidable? A. Yes.

Q. In order to do equity you would have to ascertain who was responsible for the delay? A. We certainly did consider all these things, but let me explain, Mr. Commissioner, the coffer dam could be commenced only after the high water. It takes a long time to build and it did in that case anyway, on account of the rapid current and some of their cribs were upside down and it took a long time to get the coffer dam across. When it was across, winter was on, and they had to build a secondary line of coffer dams to decrease the head against the first one in order to ease off by pumping. Then they started to pump in January, and we all hoped—I was not there but the Engineers hoped anyway—that in fifteen days it would be dry, but it took them until some time in April to get it dry. Now, to point out that it would be impossible to get the coffer dam ready in time to make the concrete before the winter set in—

Q. My question is very simple after all, and can easily be answered—who was to blame that greater progress had not been made up to this time in January, when the memo. was sent forth? A. I would say the contractors and nature.

Q. You don't know which was the most to blame? A. No.

Q. When the Council were asked to consider, to use your own words, the equity of the position, was not an important question in the equity of the position: who had been to blame for the delay? was that not an important question? A. That matter must have been discussed probably between the Minister and the Council.

Q. When you are considering the equity of a contractor to have a larger amount, is not one of the questions which enters into the equity: have you been to blame for delay? A. Oh yes, that was considered.

Q. If it was considered who was to blame? A. Well, we considered what the contractor had done in the way of delay and we found they had encountered—and in fact in my own conscience I considered that the difficulties outbalanced so much the delays that might have been laid upon the contractors' shoulders, that I did not hesitate to recommend that they were entitled to fair consideration in connection with the unwatering.

Q. And you did not think it necessary that Council should be informed of all the surrounding circumstances? A. I certainly did think it necessary that they should be informed of everything.

Q. They were not informed were they? A. They were informed probably through the Minister.

Q. They might have been informed; you don't know what the Minister said? A. I don't know, but so far as I am concerned everything was open.

By the Chairman:

I do not say it was not.

The further examination of the witness was adjourned to be resumed on Tuesday, January 23.

PUBLIC SERVICE COMMISSION.

OTTAWA, TUESDAY, January 23, 1912.

PRESENT:

Honourable A. B. MORINE, K.C.,
Chairman.

G. N. DUCHARME, Esq.
R. S. LAKE, Esq.
Commissioners.

THE EXAMINATION OF ARTHUR ST. LAURENT, Assistant Deputy Minister of Public Works, was resumed.

The witness produced original contract plans, upon which tenders were called for the wooden dam; consisting of two sheets, one a general sheet showing the dam, and the other a sheet showing the dam in relation to the position and some details.

Examination by the Chairman:

Q. With relation to that plan, it shows the position proposed for the wooden dam at the upper or northern end of the island? A. Yes.

Q. The middle section was a bulkhead connecting what? A. Connecting the sluice ways for the passage of the water.

Q. And also connecting the two ends of the dam proper, the Ontario Channel and the Quebec Channel? A. Yes.

Q. At that northern end of the island where the bulkhead is shown, would that be on dry land or in shallow water? A. That would be on dry land to the low water line here, and quite a little part would be in shallow water.

Q. Now, you have spoken of the representations made by the contractors that they were losing money and requiring some further consideration; did the contractors go to the extent of saying that they were unable financially to carry on the work unless they were assisted, or did they merely base their claim upon the ground that they were losing money? A. They did not go to that extent to me at the time to say that they could not carry on their work. The matter was referred to me for study and report. I heard them say that they were losing money and the Engineer gave his opinion that they were certainly losing money in connection with the unwatering.

Q. Did they say they were losing money on the whole contract? A. That is what I understood, sir.

Q. I want now to get at your understanding—there would be a difference in the condition of contractors who came before the Government and said: we are financially unable to proceed with this work, and the position of the same contractors coming forward and saying: we are losing money by the contract. Because, on the one hand the Department would have to consider that if they were financially unable to proceed with the work, the Department might have to take it up anyway, while in the case of losing money, the contractors would be merely having one end of the risk that the contractors take. What I want to get at is this: so far as you know from what took place was the representation of the contractors that unless they were helped they would have to abandon the work; did they go that far? A. Not before me.

Q. Before you, they merely represented that they were losing money on the contract? A. Well, that they were losing money on excavation, and wanted a higher price, which was one of the main factors of the contract. The main factors were concrete, excavation, and unwatering. They were losing money on unwatering.

Q. It was apparent they had estimated the unwatering too low, regarded as one thing? A. Oh yes, that was very evident.

Q. Then in addition to that which was quite evident to anybody, it would be evident to any sane man from the very beginning of the concrete structure that $4,000 for unwatering would be entirely inadequate? A. That was apparent. I thought it was a very low price.

Q. The $4,000 for unwatering originally had not been thought of in connection with the concrete dam? A. Originally, I do not think they did think of the concrete dam.

Q. We will come to that now—in unwatering for a wooden dam, such as was originally intended, how would the unwatering for such a dam differ from the unwatering which would be necessary for a concrete dam; would it be as much or less, suppose they had gone on and built the wooden dam? A. There were two different ways of building it. They might build there wooden dam on the dry and then they would require a certain amount of unwatering as for concrete. The contractors might suppose they could build their cribs on shore and simply sink them in place after having, I presume, cleared the bottom in some way, with some appliance or dredging. They might presume that and this would be one of the causes for the low tender for unwatering.

Q. Now then, in that latter case, would any unwatering be required, in building by the method of floating the cribs and sinking them would any unwatering at all be required? A. There would not be any unwatering at all; well, I must think of the sluiceways there. In this case, yes, on account of the sluiceways they would certainly require coffer damming.

Q. In building sluiceways through the wooden dam, some coffer damming would be required? A. Yes.

Q. The crib method could not be altogether used? A. It could be used only on parts where there are no sluiceways. There were sluiceways at the two ends of each channel.

Q. How many sluiceways would there be in the Ontario Channel? A. It is mentioned in the specifications, but I see from the plan that there are twenty-two sluiceways each twenty feet wide.

Q. How many sluiceways in the Ontario Channel are shown by the specifications? A. The specifications give the number of piers but do not give the number of sluiceways. But we can find them out from the number of piers. There are twenty-two sluiceways on the Ontario side and twenty-two on the Quebec side. They would want a continuous coffer dam so that they could build these sluiceways.

Q. That is different from what you said when you started? A. Yes, I correct myself.

Q. You mean to say that the original plan for the wooden dam required continuous coffer damming across both channels? A. That is my opinion. Moreover, in all these piers that he mentioned, this work would have to be done in the dry.

Q. You say as an Engineer then that the amount of work required in that dam made it necessary that the work should be done in the dry? A. Yes.

Q. And that they could not have floated the piers and sunk them according to the plan? A. Well, you see there is a base there. They could have floated and sunk the base to the bottom of the whole dam.

Q. Without having coffer dams of their own? A. Yes, they could do that and clean the bottom.

Q. They could clean the bottom, float out the base, sink it, and they would require no coffer dam, but they would have to coffer dam afterwards when putting in the bents? A. Putting in the bents and anchor bolts.

Q. Would there be any advantage in not coffer damming at the outset? A. They would have to do it.

Q. As they would have to coffer dam in order to put the bents and sluices in they might as well coffer dam at the very beginning? A. Yes.

Q. If they coffer dammed at the very beginning for the wooden dam that was no more than they would have to do for the concrete dam? A. They would have to coffer dam just the same as for the concrete dam but the pumping and keeping dry would be very much more expensive on account of the greater depth that they would have to go in the foundation.

Q. But the pumping might be very much more because for the concrete dam they might have to go very much deeper for the foundation. Now, the risk that they might have to go deeper for the foundations of the coffer dam was apparent of course the minute you decided to have concrete; it was a fact that you were going to have a concrete dam that raised the point that they might have to go deeper? A. Oh yes, we had to be more careful about the foundation.

Q. Therefore, when it was decided they should have to contract for the concrete dam, care was taken to point out to them that the sum which they had named was to include the whole of the coffer damming and unwatering? A. Yes, that appears in the correspondence.

Q. That is the reason you drew their attention to it? A. Quite so, yes. Might I add that of course it was not expected that it would turn out there would be so many difficulties met with in unwatering. Might I explain in connection with the change from wood to concrete that this was not a decision which I took and wrote a memorandum about at once. I had it in mind as a general principle first and I kept it in mind and delayed and delayed and it took me some little time to make up my mind to make a memo. to recommend the principle of concrete in the dam and go over the head of the Chief Engineer. That is a prerogative of the Chief Engineer to make these recommendations. He was ill at the time and I kept it in my mind quite a little while before I decided to prepare a memorandum. These details connected with the dam just grew on me and I do not know at what time exactly I thought there was something doubtful about the foundation.

Q. There were three main things about this, first there was the decision to build it of wood? A. Yes, I had nothing to do with that.

Q. Then there was the decision to build it of concrete and you have explained that? A. Yes.

Q. Then there was the third matter, about changing the location? A. Yes, that was brought in by the Engineer.

Q. You might have built it of concrete in the old location? A. Yes, we might, only that the Engineers made their choice of location. Mr. Coutlee will be better able to explain these details.

Q. As a matter of fact, in your opinion, was the construction of the dam made much more expensive by changing the location? A. That is what I have been told by the Engineer; I cannot find out exactly the reason.

Q. Would you indicate to us what may have made it more expensive? A. The greater depth of water and the swifter current that they had in the new location. If I remember well the rapid began above the head of the island where the original location was and then it dropped more suddenly and the current becomes very rapid there. Of course construction is always more difficult in rapid currents.

Q. There were two things you say, one was that there was a greater depth of water, and the second, was that there was a more rapid current? A. I say that, under correction of the Engineer.

Q. Yes, that is your suggestion, you were not on the work; that greater depth of water and the more rapid current, two things due to the same cause, would result in greater cost; the changed location brought you down to the narrow part of the channel? A. Well, I think it was narrower there.

Q. The channel contracts there? A. Yes.

Q. The point I was asking you about is this: That in consequence of the narrowing of the channel at the site chosen for the concrete dam the water would be deeper and the current more rapid than where the wooden dam was to be placed? A. Well, I think there would be no great difference in the depth of the water there.

Q. The greater volume of water would make the current run more rapidly? A. Oh, yes, the rapids are much stronger there.

Q. Therefore the greater rapidity of the current would make the coffer dam more difficult? A. Oh, yes.

Q. And the danger of scouring much greater? A. Oh, yes.

Q. Was the fact that a location was decided on there brought, so far as you know, to the attention of the Committee of Privy Council and sanctioned by the Council? A. The fact of the change of location.

Q. Yes? A. I cannot remember. I would have to look at the recommendation to Council.

Q. So far as the files show, it was not, and so far as your memory is concerned it was not? A. Not that I know of. Of course we apprised the Minister of all the facts and of course the discussion in connection with these things takes place in Council and we would not know anything about it.

Q. The fact of the change of the location would be known to the Minister? A. Certainly.

Q. The Minister may or may not have verbally informed the Council and that you have no means of knowing? A. I have no means of knowing.

Q. I was referring to the written memorandum to go to Council; the files show no such information in them, and I was asking you if from your memory you knew the change in location had been brought to the attention of the Council and you say no? A. With reference to the change from wood to concrete we did not know there would be a changed location.

Q. When the memorandum to Council changing from wood to concrete was made you said you did not know that a change of location would be made? A. No.

Q. That became apparent only after the site was examined and the plans and specifications about to be made? A. Yes.

Q. Later on, some time in the spring of 1909? A. Yes, after the study of the Engineer.

Q. After that study when it was decided to make the change which as you say involved certain greater difficulties you do not know that it was ever brought to the attention of Council? A. I do not know, I have no means of knowing.

Q. From your recollection can you recall that the fact which you have just testified to, namely, that the change of location would in fact increase the work and the difficulties, was represented to the Minister? A. I cannot recall that specifically. It must have been talked about, but whether to the Minister or not I cannot say.

Q. It might have been talked about but do you remember, if the point I have just raised was, as a matter of fact, talked about by you or the Chief Engineer? A. I do not remember. We have talked about thousands of things and I do not remember; it must have been because these things are done generally.

Q. You don't remember but it may have been? A. Yes.

Q. Do you remember Mr. Coutlee ever drawing your attention or you drawing his attention and discussing that feature of the case? A. The feature of the changed location?

Q. No, you would have to discuss that there was a change in location, but the fact that the change in location would increase the difficulties in the way you have

pointed out; do you remember discussing that? A. I remember there was some discussion.

Q. Between you and Mr. Coutlee? A. Yes.

Q. And between you and the Chief Engineer? A. I do not remember with the Chief Engineer.

Q. Do you remember ever pointing it out to the Deputy Minister? A. Your question is that the change in location would increase the danger and the difficulty.

Q. The danger and the difficulty and the possibility of increased expense; I want to know, in the first place, whether that was present in your mind, and with whom you discussed it? A. Well, I cannot say that I discussed that with the deputy because these questions were brought to a point in connection with the memos. which were made and it was only then conclusions were arrived at.

Q. But Mr. St. Laurent, this was a very important question was it not; the change of location would be a very important question, of course? A. It was very important. It would not have been very important if the conditions had been as they were expected to be and there were no difficulties in the foundation and that sort of thing. If there were no difficulties the change of location would not appear so important, as we did not expect any unforeseen difficulties.

Q. You have, this morning, very readily testified to what seems apparent, namely, that the narrow channel would increase the swiftness of the current; if it did not increase the depth it would have to increase the swiftness of the current? A. Yes.

Q. I am only asking you whether that thought occurred to you at the time the decision was reached to change the location? A. I cannot say whether it was at that time the thought occurred to me. I am very frank about it. We have thousands of things to attend to. We give instructions, and sometimes they are not carried out. I cannot remember positively what was done in connection with this or that but the memos. made there were prepared very carefully and everything there can be justified.

Q. What do you mean by everything there; there is no mmo. about th increased risk because of the rapidity of the current? A. It was all dealt with later, I suppose, in the general memo.

Q. What general memo.? 9. The memo. prepared in connection with Kirby & Stewart's claim, probably.

Q. Do you mean to Council? A. Well, the memo. I made, upon which probably the recommendation to Council was based. You see the claim was referred to me and I made a memo.

Q. Does that appear in the correspondence? A. I do not know, I should think it must be there. I am sure I made a memo. The claim was referred to me and I made a memo.

Q. Do you remember the time that Mr. Coutlee wrote that letter to you on December 13? A. Yes.

Q. Kirby & Stewart on the 29th wrote to the minister a long statement of claim; on January 5 the minister made a memo. to the deputy but there is nothing here apparently of yours? A. I am sure I made a memo.

Q. Made a memo. at the end of 1910 when the contractors were applying for an increased amount for coffer damming? A. I will look it up, I think that memo. must be there, somewhere.

Q. I was referring to the time, not that you were called upon to pay for it, but at the time that it was decided to change the location, and I was asking you this, as a matter of fact and memory: whether you can recall discussing with anybody or having any one discuss with you that the change of location would increase the dangers and difficulties in coffer damming? A. Not that part that the changed location would increase the difficulties, but I remember discussing the change of location with Mr. Coutlee but not the difficulty.

Q. You remember discussing the fact of the changed location but you do not remember discussing the point that it would increase the difficulty and so on? A. Not at that time, but in connection with the memo. I was making. What I recall is that the memo. I was preparing stated the facts, and then I took care to show it to Mr. Coutlee calling his attention that it was in accordance with the facts.

Q. That is the memo. prepared at the end of 1910. Will you search and find it if you can; it is not among the papers? A. Yes.

Q. I have here an index of all that correspondence and there is no mention of that in this index? A. I am sure, from my recollection, that the recommendation to Council was based on my memo. The trouble is there are several files. For instance, the Timiskaming dam is sometimes called the Long Sault and we found some documents under the head of Long Sault. The system of indexing was changed last year.

By Mr. Lake:

Q. Was it changed to a better system? A. Well, that is what we think, but it will take some time to get the change in full swing.

Q. I notice there were several gaps in the correspondence and we requested the Deputy to try and complete the files.

By the Chairman:

Q. Finally, the whole cost of coffer damming across the Quebec Channel was undertaken by the Department? A. Yes, there was an Order in Council passed assuming the whole cost, and changing the contract to that extent.

Q. And paying the contractors for what they had done with fifteen per cent profit and so on? A. Yes.

Q. When that assumption took place a portion of the coffer damming across the Quebec Channel had been done by the contractors? A. Yes.

Q. And the Order in Council stated that they should be paid for that part? A. I presume so, I do not think it was specifically mentioned.

Q. Yes, it is mentioned? A. I cannot recall that; it was the intention anyway.

Q. In that memorandum of the Minister dated the 34th of January, the Minister thinks the contractors should have more for coffer damming and recommends the cost of the coffer damming plus fifteen per cent and alterations? A. Did he mean in a general way with the part already done and the part remaining to be done.

Q. No, that one dated the 14th of January, 1911, recommended that authority be given to pay to the contractors over and above the contract price the actual cost of coffer damming and unwatering, and complete the dam. They were to go on and do it themselves? A. Well, they went on with the work and in the spring it was swept away. They went on with the work of the coffer damming; they tried to pump it out and they succeeded just a few days before the rising of the water.

Q. Was the coffer dam there? A. Part of the coffer dam was unsecured and was carried away by the high water. But none of the concrete dam had been done.

Q. That was in the spring of 1911? A. Yes.

Q. Do you remember what time of the year that took place? A. I think it was in April; it might be the beginning of May.

Q. Mr. Coutlee reports on May 4th that the east half of the Quebec coffer dam had been swept away? A. Yes.

Q. Mr. Coutlee recommended that Joseph Filion should be engaged to put the coffer dam across the Quebec Channel by day work at the expense of the Government? A. Yes, I remember that recommendation.

Q. And he was accordingly employed for that purpose? A. He was engaged first to advise, because he was a very experienced man in coffer damming work.

Q. I find that Mr. Coutlee wrote to the Chief Engineer on May 11, reporting that the half of the coffer dam across the Quebec Channel had been swept away and on May 19, the Chief Engineer reported to the Deputy Minister and also reported the recommendation of Mr. Coutlee in these words:

"That Mr. Joseph Filion be engaged to superintend the reconstruction of the coffer dam."

Mr. Coutlee estimated the cost of renewing the main coffer dam, the pocket dam, and the counter dam, as well as the necessary pumping at $50,000. Now, that work was undertaken, as a fact, by Mr. Filion? A. Yes, under the direction of the Department, but not as a contract. He was paid so much per day.

Q. He was paid so much per day and so were the men under him? A. Yes.

Q. By whose authority, as a matter of fact, was Filion engaged? A. The thing was referred to the Minister and he gave his authority.

Q. You think the Minister gave his authority for it? A. I remember that the matter was referred to him.

Q. Were you instructed? A. I was with Mr. Coutlee before the Minister and the Deputy Minister in this connection and we recommended that we try to get the most experienced man possible in order to get this work through.

Q. I find nothing on the files to show that the matter was ever reported to Council to obtain authority? A. To engage Mr. Filion?

Q. To finish the work of coffer damming on the Department's behalf? A. That is mentioned I think in the last Order in Council.

Q. The fact that it had been done is probably memtioned in the Order in Council in August, 1911, when you were assuming the whole work. I will look to see about that, but what I am asking you is this: do you remember whether any memo. was prepared for Council asking for authority to undertake the actual construction work by the Department? A. Oh, Yes, that is in the recommendation to Council in connection with the authority that was asked for in connection with the contractors.

Q. Yes, but that is a different thing; when did you undertake the work under Filion? A. When Mr. Filion was engaged for the purpose of starting the work he did so, but I do not think the day labour work started until we got authority, I am not sure.

Q. You never did get authority? A. We got authority from the Minister to engage Mr. Filion.

Q. Oh yes, from the Minister, what date of the year would that be? A. That would be shortly after his memo. He says on the 9th of August orders were had to proceed with day labour on the Department's account.

Q. In the report dated 15th September, 1911, from Mr. Coutlee to the Chief Engineer he says:

"On the 9th of August, orders were received to proceed with the Quebec Channel work by day labour on the Department's account."

On the 8th of August, 1911, I find you telegraphed to Mr. Coutlee:

"You may organize at once to start coffer dam work at Timiskaming."

A. That was on permission obtained from the Minister, and pressure had been brought for some time that if we were to do anything before the next high water we had to commence at once.

Q. Now, I find that there is no memo. of Council authorizing that action? A. The memo. to Council is dated later.

Q. On the 11th of August there is a report of the Committee of the Privy Council referring to a memo. dated 7th August from the Minister of Public Works and it sets out the terms of that memo. so that no memo. would be dated three days before you asked Filion to go to work? A. Yes, but sometimes the Minister would tell us that

the order was passed and to go ahead, but I understand that at the Privy Council Office it had to go o the Governor, to be finally sanctioned and all that sort of thing.

Q. On the 5th of August the Minister appears to have made a memo. to go to Council; on the 8th of August you telegraphed to Filion to start the work for the Department; on the 11th of August the Committee of the Privy Council adopted the Minister's memo. dated the 5th August, and looking at that I find it stated: the report of the Privy Council passed on the Minister's memo. is the one in which the assumption of the whole work of building the dam should be undertaken? A. Yes.

Q. It is not one under which the work of coffer damming the Quebec Channel could be undertaken at all. It does not mention that. It simply assumes the whole work of building the dam? A. Yes, and relieving the contractors of their contract.

Q. What I point out is this: there does not appear to be any decree or authority on the part of the Council to undertake the coffer damming of the Quebec Channel by day labour, upon which your order went to Mr. Coutlee? A. It must be mentioned there at the end.

Q. It does not appear to; one of the clauses says the construction of coffer dams, erection of the concrete dam, and sheet piling, &c., to be proceeded with by day labour? But that is relieving the men of their whole contract? A. Yes, taking over the work entirely.

Q. When the Minister directed you to send an order to Filion on the 8th of August, assuming the building of the coffer dam. had it been decided by the Minister to take over the whole work? A. I would not have sent that telegram without being told.

Q. Do not misunderstand me; when the Minister told you to send the telegram to commence the work on the coffer dam. had the Minister decided to recommend to Council that the whole work of building the dam should be taken over? A. He must, because the recommendation to Council is dated on the 5th, and then he signed it, before it goes to Council.

Q. Quite so, then, as a matter of fact, the undertaking of the work of coffer damming by the Department was part and parcel of the scheme to complete the whole work by the Department? A. Certainly.

Q. And that was then actually entered upon and the work actually commenced three days before Council authorized it? A. Before the date of the Order in Council.

Q. Before the date of the report to the Committee of Council. What I mean to say is this: the work which you undertook of coffer damming the Quebec Channel at the expense of the Department was not a thing by itself but was part and parcel of the decision of the Department to assume the whole contract and relieve the contractors of it? A. The matter had probably been discussed by the Minister and the Council.

Q. You cannot swear to that? A. Because the Order in Council had been prepared.

Q. Do you know it was discussed by the Minister? A. I do not know it as a fact.

Q. Have you any reason to think it was? A. As a general rule—

Q. Never mind the general rule, I want you to deal with this question, had you any information of your own to lead you to believe that the Minister had discussed with the other Ministers what should be done in this case? A. My reason is, that when the Minister told the Deputy Minister and I was told everything was all right, my reason is that the matter had been settled.

Q. As far as the Department was concerned it was in fact settled? A. I had reason to believe the question had been settled between the Minister and the Council.

Q. What reason had you? A. Because it is a general rule, when we make recommendations to Council, we know these are for discussion by Council. That is the policy. The Minister is in possession of all the facts. In our recommendation to

Council we do not put all the details in connection with these matters, but the Minister is in possession of all the facts, and as a general policy discussion takes place at Council. I know that, as a fact.

Q. You know that when the matter comes before Council a discussion takes place before Council. A. Yes.

Q. We are dealing with a question upon which action was decided on three days before it apparently came to Council? A. Our recommendation is dated the 5th.

Q. The memorandum is dated the 5th? A. Yes.

Q. That memorandum would be prepared as you have explained in your previous evidence, in your department? A. Yes.

Q. It would be dated the day it was prepared? A. Yes.

Q. It would not necessarily get before Council that day? A. Not necessarily, but very often we are pressed—

Q. I asked you would it necessarily get before the Council the same day? A. No.

Q. Council does not meet every day? A. No.

Q. In the month of August it would not be meeting every day? A. I do not know.

Q. You do not know, as a fact, what day it came before Council? A. No.

Q. Do you know as a fact, on your oath that this position was discussed between the Minister and any other Ministers before it came to Council? A. I do not know it as a fact; I am simply telling the general rule.

Q. You cannot give us the general rule because general rules are subject to exception? A. Well, some of these questions are pretty hard to answer without qualification, and I know you want to be fair and I want to be fair too.

Q. Certainly I want to be fair and I am only asking you because you are giving information about things you cannot possibly know? A. I know as a fact it takes place because the Minister often tells me he has discussed that matter with Council.

Q. I am perfectly willing to have you put in evidence everything you want to say, but what do you know about this as a fact? A. I know as a fact that these matters in connection with recommendations to Council are very often discussed in Council.

Q. Now, I presume that whenever an order comes before Council it will be discussed? A. It is there for discussion.

Q. Precisely, and we are bound to assume that when it does come up before Council it will be discussed; we do not need evidence on that point, that is only common sense. I was not talking about what took place before Council, but I was talking about what may have taken place three days before Council apparently dealt with it and I am asking you whether you personally know, of your own knowledge, whether it was as a fact discussed between the Minister and any other Minister? A. I have no means of knowing that.

Q. You have no means of knowing that? A. Except if the Minister would tell me.

Q. He did not tell you? A. I do not remember that he told me.

Q. I want you to tell me if you have any reason to suppose from any knowledge in your possession that it was discussed between the Minister of Public Works and any other Minister before your telegram went to undertake the work? A. I can only answer you that it is a matter that would be discussed; I can only answer you that.

Q. I was not asking you about theories or what you think should take place, I was asking you about what you know took place in this particular case? And I am asking you if you have any knowledge whatever that any discussion took place between the Minister of your department and any other Minister concerning this work? A. No, sir, I have no personal knowledge of that.

By Mr. Lake:

Q. With reference to the date of the Orders in Council I think you said the date of the Order in Council was the day upon which the Order was typewritten? A. Yes.

Q. Do you know that of your own knowledge? A. It may be typewritten, and if it is delayed of course the date would be changed; if it is delayed on the desk of the Minister for instance quite a few days might elaspe.

Q. I am talking about the actual Orders in Council—is not the date of the Order in Council the date on which Council agrees to it or is it the date that it is signed by His Excellencey the Governor General? A. It is approved by the Governor General of course but I am not sure as to the date.

Q. You don't know whether it is the date on which Council agrees to it or the date on which the Governor General signs it? A. I do not know.

By the Chairman:

Q. We find then on June 29, 1911, a letter from the contractors to the Minister of Public Works in which they quote a letter to them from Mr. Coutlee, dated May 12, in which they request that the department will assume the complete work and pay them for the work completed to date, and make other claims, which were carried out. So that it appears from this and from what you have just said that for a considerable time during mid-summer 1911, your department was considering the advisability of taking the whole work off the hands of Kirby & Stewart? A. It must have been talked about.

Q. Now, on that same date, Mr. Chrysler, K.C., asked for an interview with the Minister which was subsequently held, and on the 12th of July, you and the Engineer in charge made a joint recommendation to the Minister which recites some of the points in the history of the case and concludes with a recommendation that the further construction of the dam should be taken from the contractors. Were you present at the interview between Mr. Chrysler and the Minister? A. No, sir.

Q. Do you know that there was such an interview? A. I do not know.

Q. Were you not told anything about the application? A. Oh yes, I was told, I remember Mr. Chrysler's name being connected with it, but I was not present.

Q. At the interview between Mr. Chrysler and the Minister, you were not present? A. I was not.

Q. Did you know at the time that it was taking place? A. I do not think so.

Q. Did you hear afterwards that it had taken place? A. Nobody told me specially.

Q. Then on the 1st of July you joined with Mr. Coutlee in the recommendation; who asked you to prepare that recommendation? A. It must have been—

Q. Speaking from memory, who asked you to prepare it? A. I do not remember if it was the Minister or the Deputy Minister.

Q. But you were asked to prepare it by somebody? A. Yes, whether verbally or by papers being transmitted, I cannot say.

Q. Well now, you prepared this recommendation, winding up with these words:

> "We therefore recommend that authority be given to take the necessary steps in order to arrive at a proper and final settlement with the present contractors."

Had that already been decided upon when you prepared this recommendation? A. Well as far as I was concerned, I discussed the matter with the Engineer and for some time we had reached the conclusion that it was the only solution.

Q. When you wrote this letter on July 12, had you discussed it with the Minister? A. I cannot say if I discussed this with the Minister directly.

Q. You should try to remember, because you must know whether you discussed it or not; you would not as Assistant Deputy Minister go to the extent of advising that

the entire work should be taken off the hands of the contractors and what final settlement should be taken unless you had talked the whole matter over with the Minister and knew what he thought about it? A. Not necessarily, because I get lots of different things that are simply referred to me, with the notes "please report."

Q. We will try to confine ourselves to that one thing now. On July 12 when you wrote the report I am now referring to, had you discussed the decision with the Minister and said that you were going to make this recommendation? A. To take over the work?

Q. To take over the whole work? A. Oh, I think so.

Q. And this written document was a mere statement of the reasons which you had previously verbally given and upon which it had been decided to assume the work? A. Some of the reasons may have been stated to the Minister but not all.

Q. But the decision that the proper policy was to take it over had been arrived at? A. Yes, and it was certainly discussed with the Deputy.

Q. I find that on the 18th of July the Assistant Deputy says:

> "In further reference to your letter of June 29 last, transmitted to Mr. Pugsley by Mr. Chrysler, I beg to quote hereunder the terms of the recommendation which the Minister is willnig to place before Council."

And he then proceeds to state the terms of the recommendation, which he put in his memo. dated 1st August, and winds up by asking the contractors whether they would agree to that provided it were favourably considered by Council? A. Yes, I was asked to write that by the Deputy Minister.

Q. The Deputy Minister asked you to write that? A. Mr. Chrysler's letters were transmitted through the Deputy.

Q. We have these steps—you and the Minister consulting about the proper policy to pursue, then you prepare a letter recommending that policy, then the contractors are notified that the Minister has arrived at that decision? A. What I meant was that the matter had been discussed with the Minister personally, in a general way, but I do not think this was the result of any personal discussion with the Minister.

Q. Which was? A. The writing of this letter.

Q. I did not say that. I repeat my question. We have these steps: you and the Minister discussing about the proper policy to pursue, then you prepare a letter recommending that policy, then the contractors are notified that the Minister has arrived at that decision, then, acting on that decision as part of it, on the 8th of August, you notified Mr. Coutlee to let Filion begin the work of coffer damming? A. Yes.

Q. On the 11th of August, an order embodying that policy is approved by the Governor General? A. Yes, as shown by the date.

Q. The contractors did agree of course, and the first thing that is done then is that a man by the name of Griffiths makes an inventory of the plant owned by them, and the amount of that inventory has been paid, has it not? A. I think so but I have not seen it, that was dealt with by the Accountant.

Q. Then the amount of their claim outside of the plant has been the subject of inquiry by some officials? A. Yes.

Q. Who were these officials? A. Mr. Chalifour, of the Public Works Department and Mr. Douglas of the Auditor General's Department, and Mr. Donnelly, who has been on the work for practically the whole time as Assistant Engineer.

Q. They have not made a report yet? A. Not yet, sir.

Q. Now, one of the final terms was that the security cheque put up by the contractors was to be returned? A. I cannot say.

Q. In October of 1911, there appears to have been a written contract executed by your Department with the contractors carrying out the terms of that minute of August 11. There is a contract dated 5th October, 1911, based on the minute of

August 11, signed by the Deputy Minister and the Secretary and by the contractors: do you know anything about the signing of that contract? A. No, sir.

Q. You had nothing to do with it? A. No.

Q. You don't know how it came to be signed in October or anything about it? A. That is in connection with the return of the security cheque?

Q. Yes, that settlement of the claim and all that sort of thing? A. I know nothing about it.

Q. And finally, the work in the Quebec Channel has been going on since that time under the charge of Mr. Coutlee? A. Yes.

By Mr. Ducharme:

Q. Do you know if the men are working there just now? A. They are working there just now.

Q. At what place was the wooden dam to be built, was it close to the island or a little above it? A. Just at the head of the island.

Q. Would it touch the island? A. It would touch the island when the water would be very low. There would be water between the island and the dam at high water or medium high water.

Q. What is the depth of the water at that place where the wooden dam was to be built, can you tell us from the plan? A. On the Ontario Channel at low water it is dry. At high water, there would be about from six feet to eight feet of water in the Ontario Channel.

Q. Then the rise of the water was from six to eight feet? A. Well, the rise of the water during flood level has been as much as twenty feet, but that does not occur every year. The rise of the water above the apex of the bed of the river, that gets dry when the water is low, would be from seven to eight feet as you say.

Q. So that the ordinary height of the water will be about six or eight feet? A. From the bottom of the bed at that place at ordinary high water. At extreme high water there would be from eleven to twelve feet.

Q. What was your object in putting the wooden dam across the head of the island? A. I cannot say what was in the mind of the Engineer who prepared the plans or why he selected the location.

Q. Personally, you had nothing to do with that? A. I had nothing to do in connection with these details of drawing, and so forth.

Q. Can you tell me the whole length of that wooden dam? A. Yes, one thousand three hundred and fifty feet in length is mentioned in the specification.

Q. You see the tenders for the contract for the wooden dam and in which there is a great discrepancy could you explain that large difference in the prices? A. That is explained by the different point of view that the contractors take. It is hard to explain sometimes. Some think they will be lucky, I presume, and that they will get through with less money, and others may cover certain risks with higher sums of money.

Q. Did it not strike you as peculiar when you saw such differences in the prices? A. Not particularly, because that is in all these contracts. We often notice there is a great discrepancy in the different prices of things.

Q. Do you know if the attention of the Minister was called to that peculiar discrepancy? A. Well, the tenders are always shown to him.

Q. You do not know that his attention was specially directed to it? A. No, I do not myself show him the tenders.

Q. The two principal items in that tender of Kirby & Stewart that made it lower than the others was the price they charged for common excavation and the price they charged for unwatering? A. Yes, the price for excavation and unwatering and for their concrete, there was only one tender that was lower, and the others were higher.

Q. How long should it have taken to build a wooden dam like that provided for there? A. Under ordinary conditions, it should not take more than a year. Of course

all our prophecies have been upset in that Timiskaming Dam, but under ordinary circumstances, I think hardly more than a year would be necessary to build a dam of that kind.

Q. How long should it have taken to make the coffer dam? A. Do you want our own experience?

Q. Your own experience; how long do you think that coffer dam should have taken? A. Well, we started in August, when the orders were given, got the timber, and the main coffer dam was across that branch of the river about some time in December.

Q. I am not asking you how long it took to build that dam—from your knowledge of such work how much time should it take to make such a coffer dam? A. It all depends on the difficulties encountered. I cannot say. In hydraulic work we can never estimate exactly. We make mistakes. We may err in judgment very largely, I admit that.

Q. Do you know when the contractors were advised that the contract for the wooden dam was awarded to them? The recommendation was made in November but it seems to me the contractors were going ahead at that time? A. Immediately after the passage of the order in council in connection with the wooden dam.

By the Chairman:

Q. Long before that, that was not passed until January? A. I remember after tenders were received and the lumbermen were pressing for the execution of the work and Messrs. Kirby & Stewart were told to go ahead with their work.

Q. They say they were told in November? A. I cannot say as to that. I know that the Department told the contractors to go ahead with their work before the contract was passed, I think.

Q. The contract was not authorized until January and was not signed until July.

By Mr. Ducharme:

Q. Kirby & Stewart in their letter of December 19 say that they were verbally notified of the acceptance of their tender shortly after the first of November, 1908; do they state the truth when they say that? A. They were notified but I cannot give the exact date. I presume they were told verbally by the Deputy Minister to go ahead, but not by me, so that I cannot say the date.

Q. Why were they advised beforehand in such a way? A. On account of pressure brought by interested parties to have that work commenced as soon as possible.

Q. Who would take the responsibility of advising them to go ahead in that way? A. There would be the Minister and the Deputy Minister.

By the Chairman:

Q. If that were the case you give a reason why the matter should not be brought before Council immediately and dealt with instead of waiting until January? A. I cannot explain anything about that.

Q. You cannot give any explanation of that? A. No. I think I explained to you that they had to get some material in during the winter and the winter months on the winter roads.

By Mr. Ducharme:

Q. The order in council granting the contract to Kirby & Stewart for the wooden dam was recommended on January 18, 1909, by that memo. was there then any question of changing that dam for a concrete one? A. At that moment?

Q. At that time, on January 18? The tenders were called for in October and I think the recommendation to Council was made on November 20. The order in council was granted on January 18, 1909. Now, at that time during the two or three months, was there ever any discussion about the changing? A. Not by me.

By the Chairman:

Q. On January 16 you had written the recommendation that it should be made of concrete? A. Yes, but he was speaking of November.

Q. No, he was speaking of January? A. I do not understand that.

By Mr. Ducharme:

Q. From November to January 18, there was a question of changing the wooden dam to a concrete dam? A. The recommendation to Council must have been sent before that. When I made my recommendation I did not consider exactly what had been done in connection with the Order in Council. I got convinced of the thing and I simply made the recommendation.

Q. When the recommendation was made on November 20, had you then in your mind the change of the dam from wood to concrete? A. I do not think so, because my recommendation was made on January 16, and if I remember rightly it was only for three or four weeks that I had this on my mind, and it worked gradually on me and finally I decided to make the recommendation.

Q. You made your recommendation for the change from wood to concrete on the 16th? A. Yes.

Q. But was that recommendation made after you had some discussion with some of the officers of the department about the change from wood to concrete, or did you make your recommendation before speaking to anybody about this change? A. Well, no. I might have mentioned a few words about the advisability of building of concrete, but I took the whole responsibility of that change.

Q. That is all right, I admit you took the whole responsibility of the change, do you take the whole responsibility of the whole mismanagement of this dam? A. I do not agree there has been mismanagement because difficulties have been encountered.

Q. We will come to that by and by; do you think that possibly you have discussed this with others? A. Not discussed fully, but I mentioned that I would like the storage dams built of concrete as much as possible.

Q. In the ordinary course of business such a change would be discussed with the head officers? A. Yes, before I made up my mind I must of discussed it with the Deputy, but I am not sure that I discussed it with the Chief Engineer. If he was there I must have mentioned the matter to him.

Q. Now, on December 16, you made the recommendation to whom? A. I made the recommendation; my recommendation must have been addressed to the Deputy Minister. I would naturally oddress it to him.

By the Chairman:

Q. This is described as "Re Storage Dams"? A. That would be sent naturally to the Deputy Minister, unless the Minister would ask something specially and then I would answer him directly.

Q. Did you have direct access to the Minister about this whole Timiskaming matter? A. If he called for me; otherwise I would deal with the deputy who deals with the Minister.

By Mr. Ducharme:

Q. Did he ever call for you? A. Yes, he called me in when Kirby and Stewart presented their claim.

Q. Did he call you in at any time beside that? A. No, I do not think so.

By the Chairman:

Q. The point is that you do not know whether this memo. of January 16 went before the Minister or not? A. It would be taken by the Deputy Minister.

Q. As a fact, you don't know whether it went before the Minister or not? A. No.

Q. I suppose all the recommendations to the Council are made by the Deputy Minister? A. They are prepared by the Secretary and laid before the Deputy Minister.

Q. And then they are taken to Council? A. They are taken to the Minister by the Deputy Minister, and if the Minister agrees he signs them before they are sent to Council. The Secretary sends them to Council they don't pass through me.

Q. You see the signature "W.P." What would be the meaning of these initials on the document, would it mean approbation? A. His initials mean approbation.

Q. From the knowledge of the facts that you have, do you think that this Order in Council of January 18, 1909, is not misleading?

The CHAIRMAN.—That is a matter for our consideration.

Mr. ST. LAURENT.—Since the question has been put I must say most positively that it never has been the intention of misleading Council in any of the Orders of Council, and I can answer for the other officers as to that.

The CHAIRMAN.—Pardon me a moment. You have made that statement, but you have just told the commissioners here that you had nothing to do with the framing of the memos. to the Minister.

Mr. ST. LAURENT.—I am speaking as a higher officer in the department.

The CHAIRMAN.—You must speak as to your own knowledge; you can only speak as to what you know.

Mr. ST. LAURENT.—And I know those that are preparing the Orders in Council and I most positively say that to my knowledge there has never been anything to mislead the Council. I must say that.

Mr. CHAIRMAN.—You were not asked whether anybody had any intention of deceiving Council. Mr. Ducharme asked whether the language was not such as would mislead; you were not asked about the intention of other people at all, and, again, you have just sworn that you have nothing to do with preparing the memos. that went up to Council? A. Well, I am consulted sometimes.

Q. When you say that you are only speaking from your general knowledge of the character of the people? A. Yes.

Q. And you are giving them a certificate of character? A. When it comes down to an interpretation of the language.

Q. Quite so, and upon that you are no better able to give an opinion than the Commissioners? A. I am, because I know the working of the department, Mr. Commissioner.

Q. I am not talking about the workings of the department, and the construction of the language that is actually used is a matter of judgment by anybody who reads it? A. It is a matter of interpretation and judgment certainly.

Q. The interpretation of the language is a matter of judgment for those who read it? A. Yes.

Q. And it may convey one thing to one man and another thing to another man? A. Yes, but I know the feeling that exists and the working of these things.

Q. Excuse me, you have no right to answer that way, because you would be reflecting upon the Commissioners? A. No. I am not.

Q. Pardon me, Mr. St. Laurent, for saying that you were not asked by Mr. Ducharme what was the intention of anybody in the department, and you had no right to answer as you did? A. I was asked if the Order in Council was misleading, and I say there was never any intention of misleading. Mr. Ducharme will be fair to me; I think it is my right to answer that.

Q. You will see the difference of course, between whether an Order in Council is misleading and whether it is intentionally misleading? A. Oh, yes, I understand that.

Q. You were not asked about the intention you were asked about the fact, and you should not really need to be asked about the fact because that is a deduction which must be drawn from the language itself, but so far as the intention is concerned there was no question put to you and the reply is an imputation; you don't

know the intention; you could not positively swear to other people's intention? A. I apologize if I made a mistake, I have not got a legal training.

Q. Now, how could you on oath swear as to the intention of any one; that is a mental process about which you can know nothing? A. Is it not my duty to say so, that I know everybody in the department tries to put everything in the right light.

Q. You don't know anything at all about what other people try to do because that would be a mental process about which you, as a witness do not know. All that you could possibly swear to would be what you yourself tried to do. We have not asked you any other question.

By Mr. Ducharme:

Q. What I meant to say was this, Mr. St. Laurent; that the tenders were intended for a unit price and it was by mistake that a bulk price was asked? A. Yes.

Q. That was about the month of November, that took place when tenders were sent out? A. Yes.

Q. When you had the Order in Council of the 18th January giving the contract for a bulk price, when you say it was a clerical error and you say that in the month of February, it was a clerical error, I say surely when you were giving out a contract for seventy-six thousand dollars at so much a foot and so much a yard, surely that was misleading? A. I do not think so, sir.

Q. Well, your memo. is misleading, according to your own words; you said yourself that it was not intended to be bulk price but that it was intended to be unit price? A. Whether it is a bulk price or a unit price we had to calculate what would be the ultimate amount to show to Council what we think will be the ultimate amount to be paid. That has to be done whether it is made as a unit price or a bulk sum. I made some inquiry about that memo. and that memo. was right.

Q. On January 20 the Auditor General objected to the giving out of this contract as by Order in Council of January 15, because he claimed it was not the same contract and that you should call for new tenders; now, you answered to the Auditor General on February 3? A. The letter was referred to me.

Q. On February 4, the next day, the Deputy Minister wrote to the same effect to the Minister. On February 7 you wrote to the Chief Engineer and asked him to prepare plans for a concrete dam. On February 20, 1909, you decided to make the change on the same day a memo. is addressed to the Minister to that effect, and of March 13, the memo. of the Council grants the change and gives the work to Kirby & Stewart? A. Yes.

Q. Apparently for the sum of $108,050? A. Yes.

Q. Then, this contract of March 13 was given out with a perfect knowledge of all the objections that were raised by the Auditor General? A. Oh yes, it was. I explained that as a general principle I was in favour of calling for new tenders every time we had a change, but I further explained that there was a question of agreement.

The CHAIRMAN.—That is explained in your memorandum?

Mr. ST. LAURENT.—Yes, and gentlemen, I hope you don't believe I stated anything in my memorandum that was not a fact.

The CHAIRMAN.—You gave your opinion, that was all.

Mr. ST. LAURENT.—Yes.

By Mr. Ducharme:

Q. In May, 1909, Kirby & Stewart visited the place where the dam was to be built? A. I do not know anything except having seen that in a report.

Q. Personally, you know nothing about it? A. No, the engineer would know.

Q. Personally do you know they began their work in June? A. I cannot say, I did not follow these details.

Q. The concrete dam that you decided to put in place of the wooden dam was to be built the same height as the other dam? A. I never looked at those details, I had no occassion to. The plans are transmitted by the Chief Engineer, and as to the construction details they do not come before me.

Q. I am referring to your testimony; in your testimony you answer to this question of the Chairman that the thing developed itself as it went along and finally it was decided that the dam should be higher on account of the Georgian Bay Canal. When you came to the decision that the dam should be higher was it when you made the change or afterwards, because your answer is not quite clear?

By the Chairman:

Q. When you decided to change to concrete, did you at that time decide to make it higher or was the decision to make it higher a subsequent matter? A. I do not think I considered these details. It came up afterwards that it would be well to have the deeper water for storage.

Q. And you explained that your original idea for changing the dam was for storage purposes in the Ottawa? A. Yes.

Q. Then you changed from wood to concrete, and then it occurred to you or somebody that by raising the height of the dam the water could be used in the Georgian Bay project? A. Yes.

Q. Now, would that water be any advantage to the Georgian Bay project if the dam had not been raised the extra number of feet? A. To some extent.

Q. But to no considerable extent without raising it? A. Mr. Brophy proposed to raise it five feet, if I remember well, and Mr. Coutlee, in discussion, proposed to raise it twenty feet. Mr. Coutlee will be able to give the exact figures. That would be four times as much water that would be conserved under Mr. Coutlee's project to build the sluiceways with stop-logs for higher reserve.

Q. The wooden dam as it was tendered for, would it have had any effect on the Georgian Bay project? A. Yes, to the extent of the five foot storage, which gave several hundred million of cubic feet for reserve.

Q. Reserve for the Ottawa, but would that reserve be available to the Georgian Bay Canal too? A. Yes, in the same way as the larger quantity but to a less extent.

Q. You mean that if you are using this water for storage purposes on the Ottawa river you must, at the same time, use it for the Georgian Bay project? A. Yes.

Q. Would not that take away from the Ottawa river? A. Yes, but the water-power interests and the navigation interests dovetailed. During the period of low water the water-powers are affected as they have not enough water. And it is exactly during that same period that the water is lower for navigation, and so the water supplied to the water-power interests would raise the level of the water in the river to a certain extent, according to the quantity that you would let go from these reserve lakes. If you let go 20,000 or 40,000 cubic feet per second then you raise the water level for navigation so many inches, and according to the water that is let out during the low period then you increase the power to that same extent too. If at low water they have got a flow of only 12,000 feet and if by the reserve we can augment that flow to 18,000 or 20,000 or 25,000 according to the depth of storage we believe that the users of water-power will benefit that much and that the navigation is benefited in the same relation because we have a few inches more.

By Mr. Ducharme:

Q. Were you the person who ordered that new plans should be prepared for the dam? A. The instructions came through the Chief Engineer, to Mr. Coutlee.

Q. Who gave instructions to the Chief Engineer to prepare the new plans? A. Well I think I did, at least I showed him the memorandum.

Q. Would you remember if you gave those instructions? A. I would remember only by referring to it.

THE CHAIRMAN.—On February 10, Mr. St. Laurent asked the Chief Engineer to prepare plans and specifications.

By Mr. Ducharme:

Q. At that time, was the location changed? A. Oh no. There was no change in the location then. It was only when Mr. Coutlee arrived with his plan that showed the new location and the new section. After Mr. Coutlee investigated and prepared these new plans for the concrete dam then he changed the location itself; he was not ordered to change it; that change took place in due course on his work.

Q. About what time would that be? A. I cannot say.

Q. I suppose Mr. Coutlee will tell us when he made the change? A. Oh yes, he knows better than I do about all these details.

Q. Were you ever there yourself? A. I was at Temiskaming only once when the question of the difficulties in connection with the coffer damming, and I wanted to see for myself the condition of the bed of the river, and the difficulties they had to contend with and I went to see them.

Q. Did you see the island there? A. Oh yes, I went on the island.

Q. Can you tell me how much above the water the island is? A. I see from the plan that the elevation on the island is 5.94, and the low water would be 5.17; that would be 21 feet.

Q. What kind of work was contemplated on the island? A. Do you mean according to the new plan?

Q. The work that is going on? Is there work being done on the island? A. Yes, there is work being done but I cannot say if it is going on now. I cannot say if it is continuing now, I think the embankment has been completed.

Q. In your testimony you say that the reason why you did not want to ask for new tenders in February was because you were in a hurry? A. That was one of the reasons.

Q. You say that on the 10th of February. Are you aware that on the 22nd of December previous Mr. Kirby had already declared as is contained in these documents, that he could not do the work during the winter, and in fact did not you yourself write to that effect?

The Chairman:

Q. I drew the attention of the witness to the correspondence and I quoted it.

Mr. St. Laurent:

Q. Is not that in connection with concrete in the winter?

Q. In the letter from Mr. St. Laurent to J. R. Booth, of Ottawa, December 22, you say that it is an utter impossibility to build the dam this winter, that the contractors would not take the risk, that there is no difference deferring the work until the spring, and that it should be built of concrete. Now, delaying the new plan would not change conditions. That is what you wrote on the 22nd of December, 1908? A. That was all right, it would not change the condition. I knew they could not build the dam. That refers to the dam itself, but there are lots of preparatory work they could do during the winter. They could do excavation and the cutting of their timber. They have been getting the timber during the winter.

Q. As a matter of fact, is it not true that Kirby & Stewart only began their work in June, 1909? A. I cannot say.

THE CHAIRMAN.—That is true.

By Mr. Lake:

Q. Do I understand that on the 22nd of December you were thinking of changing the dam? A. I remember that now. I wrote a letter to Mr. Coutlee asking his

opinion about it, but I had not made my recommendation, and I had not made up my mind.

Q. I was asking you if you had not talked before the Order in Council passed of making the change and you admit you wrote the letter on the 22nd of December? A. As I have been saying before that thing was on my mind for quite a time before I decided to make a final recommendation. That thing had been working on my mind all the time and of course it is quite a step to take. There is a difference between having something on your mind and deciding to take the final step.

Q. You say they made a mistake about the formation of the bottom of the river? A. Yes.

Q. When did they find they made that mistake? A. They found the mistake about not having solid rock there when they made that investigation for the new plans.

Q. About when would that be? A. I cannot remember the date.

Q. Would it be winter or summer? A. Mr. Coutlee will be able to tell that.

Q. The new plans were ready on the 12th of July, so that it must have been before the new plans were made? A. Yes.

Q. They took some time to make the new plans? A. Yes. The borings are shown on the new plan, but I cannot say whether they were made in the winter or in the spring, or when. Mr. Coutlee will know that.

Q. Do you know about the value of excavation? A. Well, I know a little, I have not been in touch with excavation work for the last four years.

Q. You would know about the value of excavation? A. Yes.

Q. Don't you think thirty cents a yard a ridiculous price for common material there? A. We often have tenders for that price for common material.

Q. Was it you who made the new specifications? A. No.

Q. In the Department, in a general way, was not the question of this Timiskaming Dam being discussed among the employees? A. That is a hard question to answer, my impression is that it was being discussed.

Q. Would there not be discussion in the Department about the manner in which the contract was executed and the delays that were occurring? A. I think the question of delays came up; I must have brought up the question of delays myself.

Q. And the question of cost? A. There would be, of course, the question of the ultimate cost but, of course, I cannot tell exactly what the others said about it.

The CHAIRMAN.—I do not think that is evidence. I am afraid I will have to rule out that question. It is of no value to anybody what people were talking about.

The WITNESS.—Really, I cannot say what they were talking about.

By Mr. Ducharme:

Q. When the new plans were made, did you as a fact know that the dam would cost more than had been at first estimated? A. When the change from wood to concrete was made, new quantities were taken and the cost was stated in the Order in Council on these quantities at $108,000; after that these new plans came and I think the cost was placed at $176,000.

Q. When you used the expression that at the time the change from wood to concrete took place and new quantities were taken you mean that they were not taken on the ground but that the quantities of concrete were taken from the old plans? A. Yes.

Q. After you got the plans and specifications and saw where you were going to put the dam, the price of Kirby & Stewart went up to $176,000? A. I remember perfectly when the question of settlement came up I told the Deputy that we had mentioned in the former Order in Council that the concrete dam would cost so much, and in this new Order in Council that we could mention what we thought it would cost now, in order that the Council would know that the first information was at sea, because it went beyond what we expected or what the Engineer expected anyway.

I remember perfectly making this point to the Deputy Minister that it was important to show that in the cost. We had mentioned that the concrete dam would cost $108,000, and when the next Order in Council came, I said: we must repeat that again and show what it costs with the new quantities to show them the comparison, and the Deputy said, that is right.

Q. That was to call the attention of the Minister to the increase in cost from $108,000 to $176,000? A. I said it was important to put that in.

Q. At the same time you got new specifications prepared? A. After the Order in Council for the change from wood to concrete, we made a recommendation that it would cost about $108,000 based on the quantities given, and after the new plans were made the contractors went on anyway, and when the occasion of the new Order in Council came to pay the contractors for unwatering, I called the attention of the Deputy that it was important to show that in our previous report we had mentioned that the concrete dam would cost $108,000, while now it had gone much beyond that, and it was important to show the two in comparison so as to advise them that our first estimate was too low.

By the Chairman:

Q. Your memo. authorizing the change to concrete, was dated 20th February, 1909. There was no other memo. to Council about the matter until the 10th of November, 1910, when you were talking about housing and heating, so there was no memorandum to Council with reference to the location and the second increase to $176,000 at the time that change in location took place and the work was commenced. Answer yes or no. A. I do not think there was at that time.

Q. As a matter of fact we find that it was not until the memo. dated 4th January, 1911, from the Minister to the Committee of Council that any mention was made of the increased price consequent upon the change of plans. As to location, you go on there to say in the memo. of the 4th January:

> "The tenders received, based on the amended quantities and unit prices are now revised as follows, Kirby & Stewart, approximately $176,000.

There was no mention before that? A. Probably because the Engineers themselves did not know it was to cost so much before that.

Q. You say now that you told the Deputy Minister that Council ought to be advised? A. That was when the Order in Council was under way.

Q. That is on the 4th of January, 1911, or nearly two years after the location and when the greater part of the work had been already carried out? A. Not the greater part of the work.

Q. Well, all the Ontario dam had been built and a great deal of coffer damming on the other side? A. Yes, and difficulties arose.

Q. The location had been absolutely settled then? A. Yes.

Q. So far as a written memo. to Council you convey no information about that increased cost to Council; it was only brought to the attention of Council long after the expenditure had been undertaken? A. Oh, yes.

Mr. LAKE.—And, in the meantime, no memo. had been presented to Council?

By the Chairman:

Q. In the meantime memos. had been presented to Council which made no mention of the increased cost? A. I do not know that the engineers knew at the time it was going to cost so much.

Q. Oh, yes they did. In November, 1910, they knew from the quantities of the new location that it would cost more than $108,000, which had been calculated in the winter of 1909, because it was on the new quantities of the new location that the estimate ran up to $176,000? A. Yes, the question as to whether the Privy Council should have been advised.

Q. I did not ask you whether they should have been advised. I am asking you whether they had been advised.

By Mr. Ducharme:

Q. I mean to say when you got the plans prepared you knew the work would cost more than $108,000? A. I do not know when the plans were prepared.

Q. When the plans were prepared and put before you, you knew that it was going to cost more than $108,000? A. That is a thing I cannot answer positively, because the estimate, if one was made by the Engineer, was sent by the Engineer, to the Chief Engineer.

Q. How could you tell the Minister, that instead of $108,000 it should be $176,000, how did you find that out? A. That came with the question of allowing something to the contractors for coffer damming. You see the Engineer was made to say what quantities were involved in order that we might report to Council that it was going to cost much more than anticipated.

The CHAIRMAN.—I think you are mistaken there.

By Mr. Ducharme:

Q. The location of the dam was changed; it was decided to put one dam in the Ontario Channel at the lower end of the Island and on the Quebec side at the higher end of the Island. This change of location made a change in the dam and so forth; did not you know then that it was going to cost more? A. I do not know that I considered that question then.

Q. As a matter of fact, did you not know it would cost more without taking any measures to consider it? A. I probably thought at the time that it was going to cost more but that it was based on unit prices.

Q. Why were new specifications made? A. Because it was different kind of work.

Q. And being a different kind of work it would cost a different kind of price? A. No, the prices were to remain the same.

Q. Not if the foundations were going to cost more on account of the height of the water? A. At the time these plans were presented, I did not know myself at what depth they would have to go.

Q. Did you know the change of location was made when the plans were prepared? A. After, when the plans came I knew; perhaps not during the study, because I was not looking at the details.

Q. You knew nothing about the plans until you saw them on July 12? A. No, I had not seen them before.

Q. You never knew that the department was making plans for a change of location? A. I knew because instructions had been given, but I mean to say that I did not see the plans showing the change of location and new conditions until they were presented.

Q. If you knew of the change of the location of the dam surely you would be able to tell us why the change was made? A. I cannot tell the reasons of the Engineer.

Q. You do not know why they changed the location of the dam at all? A. I do not know why the Engineer changed it.

By Mr. Lake:

Q. It was Mr. Coutlee who made the change and he will be examined? A. Yes.

Mr. DUCHARME.—I think the Deputy Minister should know the reason?

Mr. LAKE.—One would think it ought to be reported to him.

The WITNESS.—Mr. Coutlee may have told me of some idea of changing the location during the progress of the work.

The CHAIRMAN.—I notice that on December 3, 1910, you wrote a letter to Mr. McGiverin, M.P., referring apparently to a meeting concerning Kirby & Stewart's contract; do you remember Mr. McGiverin speaking to you about it? A. Yes, Mr. McGiverin came into the office with Mr. Kirby.

Q. What was the object of his visit? A. It was to discuss that matter of claim of the contractors.

Q. What matter of claim? A. He accompanied the contractors to my office when they came, when the Minister had told me to investigate.

Q. The Minister had told you to investigate what? A. Their claim. In my evidence I said that one day I was called into the Minister's office and Mr. Kirby and Mr. Stewart were presenting a claim in connection with their contract and the Minister referred the matter to me, and it was arranged that when I would be ready to discuss the matter they would be called to my office and they came with Mr. McGiverin.

Q. Mr. McGiverin's calling upon you to support the claim of Kirby & Stewart would be part of the proceedings which you have given in your previous evidence, and which wound up with the letter from Mr. Coutlee, dated the 13th December, and after that ended in a memo. from the Minister to Council? A. Yes, that would be part of the proceedings.

By Mr. Ducharme:

Q. It was all during that month of December, 1910, you were discussing the whole matter? A. Yes, Mr. Coutlee was present at the meeting. We had discussed the matter personally and Mr. Coutlee was present at the meeting.

Q. Messrs. Kirby & Stewart produced a copy of a letter of yours dated March 19th:

> "I have to inform you that the concrete dam has been awarded to your firm at the rate provided in the schedule list of prices."

Do you remember writing that letter? A. Yes.

Q. In this letter you drop away altogether from the lump sum and you say the unit prices? A. Yes.

Q. And the dam was to be built of concrete instead of timber? A. Yes.

Q. That was on the 19th of March, 1909? A. Yes.

Q. You wrote this:

> "According to new plans which are now being prepared. Of course it is understood that your price of concrete per yard as stated in your tender and the sum mentioned for unwatering, is to cover all coffer damming which you require to build the dam."

—you wrote that? A. Yes.

Q. In your own letter you speak of new specifications, and on the 19th of March you wrote to Messrs. Kirby & Stewart about their getting the contract that changed all the dam from wood to concrete with the new plans and the new specifications? A. I think the new specifications are attached.

Q. I asked you if there were new specifications prepared and you said you did not know? A. I never said that. We were bound to have new specifications presented at the same time. In your letter you say that as soon as the plans and specifications referring to the concrete dam will be ready, the contract will be presented for signature. When the contract was presented for signature in July, 1909, the new specifications had been prepared.

The CHAIRMAN.—It is attached to the contract.

The WITNESS.—I cannot say anything about the signature of the contract. I had nothing to do with it. The new specifications were attached to the contract.

By Mr. DUCHARME.—I asked you whether before the contract was signed, there were any new plans and specifications, and you would not admit that? A. I beg your pardon, I must have misunderstood you.

Q. I want to know if when you changed the plans of your dam and raised it much higher and knew there would have to be new plans and specifications, you had then new plans and specifications? A. When the contract was signed the plans and the specifications were there.

Q. Then you thought it necessary to make new specifications? A. From the beginning, of course.

Q. Then if it was necessary to make plans and new specifications, was it not, as a matter of fact, just that there should be new tenders asked for? A. Well, the new specifications were necessary in connection with the different character of the work. As to my opinion as to whether it was necessary to call for new tenders, I say that as a general principle I am always in favour of that, but I have stated the reasons why I thought that in this case we were in honour bound to give consideration to Kirby & Stewart, because they had been told to go ahead in the first place, and in the second place they were the lowest tenderers.

The CHAIRMAN.—We have gone over that two or three times. As to whether new tenders should not be called for is a matter of argument and opinion, and you cannot give evidence as to that.

By Mr. Ducharme:

Q. Have you any knowledge of any pour parlers with the Government about purchasing the land from the Ontario and Quebec Governments? A. Yes, I think we applied for some land, and I think somebody in the Engineer's Office went to Ontario and went to Quebec to see about the land there.

Q. What was that land required for? A. Because the bed of the river on the Ontario side belongs to the Provincial Government of Ontario, and on the Quebec side it belongs to the Provincial Government of Quebec.

Q. Did you know that before started to do the work and gave out the contract? A. I knew that the bed of the river belonged to the Provincial Governments.

Q. Would the Deputy Minister know it also? A. I think so.

Q. How is it that you came to give a contract to build the dam upon property that was not yours before you ascertained how, and on what conditions, you could get the land? A. We had several conferences in connection with this with the Ontario and Quebec authorities, as to the land we required for our dam, and finally it was agreed in connection with the Timiskaming that we should go ahead.

The CHAIRMAN.—Mr. Ducharme is saying that all that took place after you had commenced to build the dam, and Mr. Ducharme is asking you if you can give any reason why the negotiations to take the land did not commence before you undertook the work? A. I do not know about that.

By Mr. Ducharme:

Q. It was known at the time that you would require that land? A. That we would require the site, yes.

Q. Now, Mr. St. Laurent, your Engineer's estimate of the first dam was $80,000? A. That was the Chief Engineer's estimate.

Q. And you say that the rapidity of the current would naturally increase the cost of the coffer damming? A. Yes, sir.

Q. Do you really see it would increase it very much? A. Yes, on account of the greater difficulties. The coffer dams are built by sections, they are brought in and floated in place and sunk there. Of course the bringing in of cribs in a very swift current is difficult and it is hard to get them at the right place, and the filling in is much more difficult because they have to get in scows and the swifter the current the greater the difficulty is, and the greater the cost.

Q. Do you think there would be much difference? A. All this is relevant to the quantity of work to be done, and the extent of the difficulties in connection with the work.

By Mr. Lake:

Q. Taking the old and the new locations, I think you said that you considered the new location would necessarily be a more expensive business than to build the dam on the old location? A. Yes.

Q. Would that necessarily be the case, taking all the circumstances into account; you had two channels there and you might use one while you were building the other. From the very beginning was it a more expensive business to build on the new location than on the old? A. I did not enter the details of that, but my impression is that it would be more difficult on account of the condition of the current at that place; that is merely my opinion.

Q. You wrote to Kirby & Stewart on the 8th of September, 1909, saying that they were not making good progress on their contract, and ordering them to employ a large force and complete the work as soon as possible; how did you know that? A. From the report of the Engineer.

Q. Were you then satisfied with the contractors and their work? A. You mean to the progress of their work.

Q. Yes. A. As to the progress I was not satisfied, certainly. I said that before.

Q. Do you think they should have made quicker progress with their work? A. I think so.

Q. Had you occasion to make the same remark later on? A. Yes. I testified that all the time I thought that the progress was not satisfactory. Whether that was due to difficulties encountered or not I do not say. Our experience showed that a good deal of that delay was probably due to difficulties.

Q. The dredge *Queen* was sent on the work? Yes.

Q. Why was it sent there? A. It was sent there to enlarge the channel on the Ontario side so as to pass more water there to bring the channel to the level of the sluiceways.

Q. On account of the dam being moved further down? A. Not necessarily—it was sent there because there was lots of excavation to do that was not included in the contract and we decided to do it with our own dredge *Queen*.

Q. The *Queen* was there to do the Government work and not the contractor's work? A. Not the contractors?

Q. Not the contractor's work? A. Not the contractor's work.

Q. You received a letter from Mr. Coutlee dated the 13th December, 1910, wherein he says: The contractors began work during 1909, but only signed their contract on July 22, 1909; the contractors had been on the work since the end of May; plans not submitted until June, very considerable change in the plans adopted, he argues there very strongly that bulk price, $4,000 for unwatering in original plan not contemplated for work really done, recommends Department should assume risk and build coffer dam in Quebec Channel, he gives the estimate cost of the coffer dam at $20,500. When you read that letter from Mr. Coutlee did not it strike you that that letter was strongly in favour of the contractors ignoring completely the arrangement arrived at with the Government; did not that strike you? A. That it was strongly in favour of the contractors?

Q. Yes. A. No, there were difficulties they were encountering in connection with the coffer damming.

The CHAIRMAN.—He has already explained that letter was written after consulting with the Minister for the purpose of making out the claim they had decided should be allowed.

The WITNESS.—We discussed all these on instructions from the Minister.

By Mr. Ducharme:

Q. You got a report from Mr. Perrault showing the cost of the dam at $108,582? A. That is based on the quantities for concrete. He was asked what would

be the quantities for a concrete dam in accordance with the plan he had prepared, and supposes the cribwork was replaced by .... concrete, and he gives an estimate on that and that alters the estimate from $80,000 to $108,000.

Q. Where did he take these quantities? A. He took them in Ottawa, I suppose. I presume he took them in his office here in Ottawa from the original plan which he had. I cannot say myself what he did to give these quantities.

The CHAIRMAN.—Please look for the memo. and for the data which you may have in the Department showing how you made up the $176,000, that you refer to later on in making the memo. to Council. You said on the quantities it would be $176,000; you must have some memo. about that? A. I think some quantities were given by Mr. Coutlee.

Q. Then you would have a memo. of that calculation? A. There must be.

By Mr. Ducharme:

Q. The contractor knew in June where the dam was going to be put, when he started to work? A. He knew, of course at the time he signed the contract because he had visited the site. He was there in May I believe and commenced his work in June.

Q. You should be able to find out at that time how much the dam was going to cost?

The CHAIRMAN.—He will get that information about the $176,000 and bring it down to us.

By Mr. Ducharme:

Q. There is no mention of the $176,000 in the papers we have until January, 1911, when this memo. was passed? Did Kirby & Stewart do any excavation outside of the excavation provided by the contract? A. That is a detail I cannot give.

The CHAIRMAN: Mr. Coutlee will give us that information.

By Mr. Ducharme:

Q. We have here a memo. from Mr. Steckel on the 19th of March, who is he? A. He is an Engineer that has been employed in the Department for a great many years and he was employed in the preparation of estimates up to last year, when he was superannuated, and replaced by Mr. O'Brien, who now does Mr. Steckel's work.

Q. Who is Mr. Chasse who endorsed the new plan and specification? A. He is the Law Clerk of the Department of Public Works, according to law I think he has to sign all contracts with the Secretary and the Deputy.

Q. You called for tenders for excavation? A. Yes.

Q. Did you do that work yourself? A. We started doing it, but there is not one-half of the material taken out yet.

By Mr. Lake:

Q. Do you have a form of contract for a bulk sum and also for unit prices? A No, it is the same form, the contract applies to both.

Q. I notice that this document before me is marked: "Contract for bulk sum." A. Yes.

Q. And you say that the same form of contract is used for either unit prices or for bulk sums? A. Yes.

Q. Then what is the use of putting that endorsement on the contract? A. I presume it has been printed a long time ago; that is a detail about which the Law Clerk can give you information.

Q. Take this contract which was signed on the 22nd of July after the new location had been decided upon and new plans and specifications had been decided on, and the sum agreed upon was $108,050, why were these words added to the clause: "A

concrete dam bulkhead across the Ottawa River at the head of the Long Sault and near Timiskaming Station on the C.P.R., in the township of Gendron in the province of Quebec, at unit prices mentioned in the annexed schedule of an approximate total sum of $108,050 of the lawful money of Canada." A. That was added by the Law Clerk as based on the Order in Council which he had.

Q. But at this time you must have known that it was going to cost a great deal more at unit prices? A. At this time I could not say it would cost more. This amount was based on the Order in Council which had been prepared on the quantities given by the Engineer.

Mr. CHAIRMAN: In the previous March? A. In the previous March.

By Mr. Ducharme:

Q. And for a concrete dam based on the plans of the wooden dam? A. Yes.

Q. Yet having altered the location to a more costly place, having altered the plans and specifications, that amount appears as the amount for which the contractors bind themselves to build the dam, is not that so? A. It does appear in the contract.

By the Chairman:

Q. On the 22nd of July, 1909, after, as Mr. Lake has pointed out, the location had been settled and all the plans and specifications made, did you not at that time know what the cost of the dam would be at the prices Kirby & Stewart were to receive applied to these new specifications? A. I did know as a fact what it would cost ultimately.

Q. You did not make the calculation? A. No.

Q. And up to that time, so far as you know, the calculation had not been made? A. So far as I know I do not remember any calculation being made there and then by the Engineer.

Q. Up to that time? A. Up to that time.

By Mr. Ducharme:

Q. At that time could it have been made? A. Yes.

Q. Could there have been made at that time a calculation based on the quantities shown in the plan and the prices named? A. The assumed quantities.

Q. The quantities shown on the plan? A. Yes.

Q. It could have been made and it was not made? A. The estimate was made later and turned out too low.

Q. Not because the plan was changed, but because new alterations were made later? A. And more difficulties unforseen.

Q. And there were new alterations? A. Yes.

Mr. LAKE: I am doubtful still whether this sum has been put in.

The CHAIRMAN: He says that up to that time it was the only sum that had been calculated. Up to the time the contract was made at $108,050, it was the only sum that had been calculated.

By Mr. Lake:

Q. Is that so? A. Yes. About the making of these contracts they don't come before me.

Q. Who would draw that contract out? A. Of course the contract after it is prepared by the Law Clerk is taken to the Deputy Minister so that the plans may be signed.

By the Chairman:

Q. Whose is that writing there, is it the Law Clerk's writing? A. It is either the Law Clerk's or his clerk's.

By Mr. Lake:

Q. After the Law Clerk has made out the contract does it not come before the Engineer at all? A. They are sent to the Engineer for action to be taken. Some of the contracts when they are prepared wait a long time for signature. Whether this waited a long time or not for signature, I cannot say. Sometimes they do. That would explain some delays in signing.

Q. What I want to know is this. When the Law Clerk was instructed to draw up the contract, do I understand you to say that no technical man looks at the contract to see it is drawn out in proper form from the technical aspect; does it simply go from the Law Clerk straight to the Deputy? A. To the Deputy Minister to sign.

Q. I notice among these specifications which are attached to the contract here, there is a special reference to unwatering. There appear to be two specifications here and neither one of them is dated, both of them are signed and neither dated. I notice that special reference is made to the unwatering and it is stated that the contractor is wholly responsible for the damage from freshets and other causes at his own cost and expense? A. That is practically in all specifications and contracts.

By Mr. Ducharme:

Q. Are those words there merely as a matter of form? A. They are pretty severe clauses and very often these matters are judged in equity.

The CHAIRMANN.—They appear to be more honoured in the breach than in the observance.

By Mr. Lake:

Q. You mentioned that the sum of $4,000 struck you as being a rather small sum for the unwatering? A. Yes, it was rather small in my opinion.

Q. Are you in the habit in the Department of accepting the lowest tender in every case? A. That is the general rule in every case.

Q. You do not take the trouble of inquiring into the standing of the contractors or whether they are able to carry on the work or not? A. That has been done, to my knowledge last year and two years ago.

Q. But in this case you were satisfied? A. In this case I do not know that it was done. I do not know it was, I don't think it must have been done. Of course I am responsible to the Deputy and to the Minister.

By the Chairman:

Q. When the original tenders were put in and you saw the amount for unwatering varying so very largely in the various tenders, did your Department or you make up any calculation as to what in your opinion the unwatering and coffer damming would cost? A. Not me.

Q. You don't know if anybody else did? A. No.

By Mr. Lake:

Q. In a case like this where a man has apparently made a very small tender for the unwatering and he finds he is going to lose money on it, is it the practice of the Department to come to his relief, has that been done in cases which you know of before? A. There have been cases. I could hardly point out from memory, where claims have been referred and the matter has been considered in equity when it has been evident that the contractor was losing, that certain clauses of the contract which dealt with the legal point of view of the language, were laid aside and the matter was considered in equity.

By the Chairman:

Q. Do you recall any particular case in which an extra sum had been allowed to a contractor for a special service in relation to which he had been particularly

warned that that amount was to cover the service? A. I do not remember any particular case, but circumstances have been altered on account of the natural conditions.

Q. The circumstances were not altered in this case, after they signed the contract in 1909? A. They were to that extent.

Q. To what extent? A. To the extent that the difficulties for coffer damming proved to be much greater than anticipated.

Q. You did not anticipate that at all because there was no such thing as anticipating what was under water, he took the risk and you notified him that he was taking all the risks and that he would not get any more, and at that time he knew where the location of the dam was and could see for himself, and he visited the ground, and that was a risk which he took? A. You have to take my word about it, you know that the difficulties as anticipated were not as great as they turned out to be.

Q. Anticipated by you? A. By me or the Engineer.

Q. How did you know what the contractor anticipated? A. Oh, I did not know, I am not speaking about the contractor at all.

By Mr. Lake:

Q. What strikes me in this case is that it was mainly on account of the very low sum he put in for unwatering that his tender came to be so much the lowest of the whole lot? A. It was on account of the unwatering, I think, and his low price for excavation.

Q. Having obtained the contract, because he put in such a low price for these two, is it fair to the other tenderers that he, after the contract had been signed, and had agreed on these prices, should have received special consideration from the Department and get much larger prices than he contracted for? A. Well, that is a matter of consideration. The point of view I would take is that there was competition and that they were the lowest in the competition, and that gives them such consideration.

By the Chairman:

Q. Mr. Lake has pointed out to you, and as events have shown, and as your own judgment might have shown at the beginning, that they were the lowest because they put in for unwatering an absurdly low amount which never would have been sufficient for the coffer damming and unwatering of that dam, whether it was wood or concrete, as you yourself have pointed out in the evidence? A. I did not say absurd.

Q. Even supposing that you did not, the facts which you have related show that it was absurd? A. It was very low.

Q. Yes, very low, Mr. Lake says that they managed to be the lowest tenders because they put in a sum so very low that it was not reasonable at all for unwatering, is it fair to the other tenderers for you to never give them any look in but to pay this original tender upon a much higher rate? A. I think I considered it fair and that is the way I recommended. I considered it fair because they had been told to go ahead and because they were the lowest——

Q. You considered it fair for the reasons you have given in your evidence? A. Yes.

Q. Let me ask you this question about the plans—Where a tenderer for a large public work becomes the lowest tenderer because he puts in an altogether too low sum, so low that examination would have shown it was absurdly low, do you consider it good practice for the Department to accept the tender simply because it is the lowest? A. No, sir, I do not consider it good practice, but it is the practice.

Q. As a matter of fact, under good practice, the Department ought to form an idea as to whether the tenderer can reasonably do the work for the price which he is claiming? A. Yes.

Q. That ought to be the rule in good practice? A. Yes.

Q. If you follow the practice in the Department of giving to the lowest tenderer, then very frequently claims for extras, and extra consideration, and all that sort of thing are made and have to be adjudicated upon by the Department? A. Certainly, in my opinion, I am not in favour of the lowest tender being accepted in every case unless it commends itself to the judgment of the Department as being near the thing. It is a matter of policy, but in my judgment it is not the best policy.

By Mr. Lake:

Q. Have you known of many cases where a contractor has put in a very low tender and has made a claim afterwards to the Department that he is losing money by carrying it out, and in which the Department has insisted on his going on with the contract and losing the money and has refused to come to his assistance? A. No, I cannot point to any such case.

Q. You cannot remember any such case? A. When the Department has refused to come to the assistance of contractors that were really losing money, I cannot point out any case.

Q. Do you remember any case in which the contractor has returned money to the Department, upon the ground that he has made too much on the contract? A. Oh, no.

The CHAIRMAN.—It is a case of heads you win and tails I lose.

A. I suppose it is.

By Mr. Lake:

Q. Are there many cases where the contractor has been returned his deposit when he has to withdraw from his contract because he was losing money? A. Well, I might point to the Andrews Rapids Lock Case, although I do not know if it was entirely similar to this, but this is what took place. The contract was given to Kelly, who were the lowest tenderers at the time. They went to work and they delayed and delayed and tried to have some change made. The lock and dam were to be built of concrete and they were trying to have a change made from concrete to limestone.

Q. The contractors were trying to have the change made? A. Yes, and the change was to be made at a very much higher price. I remember the matter coming up during Mr. Tarte's time, and it was referred to me, very often for a report and I always reported against the change from concrete to limestone, because I considered that good concrete was better than the limestone they had out there and that therefore the extras the contractors were asking were out of all proportion and not reasonable. Anyway, my reason of refusal was that concrete was better than limestone. They did not succeed to have that change made and finally the contract was taken out of their hands and a board was appointed consisting of the Deputy Minister of Public Works, the Chief Engineer, and Mr. Brophy to try to settle the case, on whatever the contractors had done and take over their plant. That Board met and they got the contractors together and finally they made an award and the contractors were paid for whatever work they had done, and the equipment was taken over, just the same as we have taken over the equipment in this case, and ultimately we paid them something when the settlement was made. That is a pretty similar case.

Q. There, the deposit was returned to them? A. I cannot say positively, but that is my impression.

Q. You cannot remember any case of a deposit being forfeited because of the failure of the contractor to carry out the work? A. I cannot point out any case but my impression is that there may be such cases.

Q. In regard to the dam now being constructed I notice that on the 12th of July you stated you desired to change the design and to give a larger opening; you had again changed your position there? A. That was on the representations made by the lumbermen, they thought they should have a larger opening for the passage of their logs on the Quebec side. I know that the Engineer recommended a change there that the opening be left at sixty feet instead of twenty feet for the passage of the logs because last spring the logs jammed on the Ontario side at our sluices.

Q. Then it is fortunate that you did not go on and get the new dam constructed on the old plan? A. There are further recommendations made, the Engineer has also recommended more sheet piling in addition.

Q. In a letter of the 29th December, 1910, Kirby & Stewart refer to a considerable amount, part of which is not on the files at any rate, so far as we can see. Do you think that that correspondence is in the Department? A. I do not know, I was not there when the files were sent.

Q. There is one letter in which they state that before the 28th of December they had already——? A. That would be with the Engineer, I know there was lots of correspondence with the Engineer.

Q. This letter is addressed to yourself and is dated December 28, 1908, and although there is a quotation from it here I cannot find that letter. They go on to say:

> "At the date of this letter, we had been verbally informed that our tender would be accepted, and although it had not formally been accepted by the Department, we had gone on and contracted for timber and plant to the extent of over $20,000."

I notice several gaps, apparently in the file; if you can come across any other files on the subject will you let us have them? A. Some of the correspondence may be with Mr. Coutlee. There was considerable correspondence, but I will look it up again and see if I can find any more.

By Mr. Ducharme:

Q. When you are ma king a coffer dam, as you did at Timiskaming, where it is that date to complete the coffer dam on the Ontario side of the river. Suppose they began on the 15th of June they would have July, August, September, October and November, that is five full months, to do their work; was that ample time? A. On the Ontario side only?

Q. Yes. A. Yes, they had ample time because the coffer dam on the Ontario side was not very extensive. I think they made an earth coffer dam there.

Q. When you are making a cofferdam, as you did at Timiskaming, where it is divided in two sides, which side should be taken first, don't you think it is the widest and most difficult side that should be commenced on? A. In this case the best side to begin with was the side that could be dry at low water, excavate this part, increase the passage at low water so that the sluiceways are able to let more water pass through and relieve the other side. That was the idea in this case.

Q. You would have made the excavation lower than the bottom of the river on the other side? A. All the river had to be excavated to the level of the sluices. The sluices there were laid below the natural bed of the river and the idea was to increase the passage there and relieve the Quebec side.

Q. From what you tell me, where the dam is built on the Ontario Channel the water is deeper there than it is at the head of the island on the other side? A. The most difficult channel and deep water was on the Quebec side.

Q. For the first dam, but not for the second dam? A. For both locations. There was a little more water for the first on the Ontario side but the extra depth of water

was so little that it was easier to commence there. Mr. Coutlee is well *au fait* with the details.

By Mr. Lake:

Q. How long have you been actually in the inside service of the Department in Ottawa? A. Since 1908, but I have been in the Engineering Service at Winnipeg and Ottawa since 1889.

Q. You only came to Ottawa in 1908? A. I came down to Ottawa in 1908 from Winnipeg.

Examination of Witness, Mr. St. Laurent, closed.

OTTAWA, TUESDAY, January 23, 1912.

CHARLES DOUGLAS, sworn.

By the Chairman:

Q. You are employed in the Auditor General's office? A. Yes.

Q. You have been lately paying some attention to the claim of Kirby & Stewart connected with the Lake Timiskaming Dam? A. Yes.

Q. Examining the claim which they put in for the work done by them on that dam? A. Exactly.

Q. You have completed your examination of their books and accounts? A. Yes, of their books and accounts.

Q. Have you made a written statement yet? A. No.

Q. I find in the official files a statement by Kirby & Stewart, dated October 19, 1911, in which they claim a sum of $225,941.77 as a balance due to them? A. Yes.

Q. You have had that account before you in considering this matter? A. We examine the vouchers on it.

Q. What amount have you concluded is due them? A. Well, we arrived at no definite decision at all; we satisfied ourselves that the amount that was claimed for the coffer dam was fair and reasonable and also that the cost of their plant which was examined I believe by Mr. Griffiths, that he would accept that. With regard to the rest of their claim, there was no definite decision upon it, in fact we did not conclude our examination of it.

Q. Who was with you in that examination? A. Mr. Chalifour of the Public Works Department.

Q. Are you still working at it? A. We have not done anything on it since the 8th of December.

Q. Mr. Chalifour of the Public Works Department, and who else was working with you on the matter? A. Mr. Donnelly remained with us for a while; he was with us the first day only.

Q. What suspended your work on the 8th of December? A. Mr. Donnelly was preparing a final estimate of the work done on the concrete which was to be sent to the Department.

Q. What had an estimate of the work done to do with the expenditure as to which they were to be paid? A. There was a clause in the Order in Council and also in their agreement with the Department to the effect that the agreement would be for the actual and reasonable cost of the work. There is a clause to that effect and there is a question as to the exact meaning of that.

Q. Between whom was the question? A. Kirby & Stewart and ourselves.

Q. They contended for the actual cost? A. For the cost as they put in their account.

Q. They contended they were entitled to be paid actual cost as their account showed that actual cost to be? A. Yes.

Q. And you contended what? A. Well, so far as we were concerned there was no contention at all. Mr. Soper, the bookkeeper for Kirby & Stewart stated that he considered that that was not a matter we could go into.

Q. Which was not a matter you could go into? A. As to whether they should be paid the actual cost as shown by the vouchers, or whether they should be paid according to contract.

Q. His contention being that you were there to look at their books for the purpose of examining their accounts, to merely see their accounts? A. Yes.

Q. Did you get the actual cost as shown by their books? A. Our position with regard to that was that they had vouchers for everything that totalled up their claim, except for a clerical error they had made of two or three thousand dollars.

Q. Which totalled up their claim as I have drawn your attention to? A. Yes, $334,572.18 is the total amount of work they had done, except for a couple thousand dollars clerical error:

> "Total cost of work including interest on advances and notes to bank to October 31, 1911, as per vouchers, $334,572.18."

Q. By the way, how could notes to the bank be included in the total cost of the work? A. Notes to the bank would represent accounts that the bank had paid for them.

Q. Did you furthermore find that the credits which they had given in the October 19th account were correctly stated? A. I think there was a difference in some of their accounts. They were paid for at the rate of work done plus fifteen per cent. actual cost plus fifteen per cent. They did not include the fifteen per cent in the statement of credits. I think it appears in this, $7,434 in the account.

Q. So, that would swell the amount of the credit by a small sum? A. Yes.

Q. But in the main, if they were to be paid actual cost the balance of about $225,000 at the time would appear to be due them? A. Yes.

Q. And leaving that question of the interpretation to be put upon these words: "reasonable cost," to be determined later on? A. Yes.

Q. Since the 8th of December, you have had no further instructions in the matter? A. There have been no further instructions on the matter.

Q. In your examination of the accounts, did you ask for and examine in detail the vouchers for expenditure? A. Yes.

Q. And you found them all for expenditures that apparently had been made around the dam A. They seemed to be for expenditures of material sent up to Timiskaming.

Q. And for work? A. We concluded that was the only work they were doing.

Q. Were there any items for any considerable amount about which you had any doubt? A. There were a number of items that were not fully explained to us at the time but subsequently Mr. Soper explained them to us.

Q. He satisfied you as far as you had gone that the expenditure had been bona fide? A. Yes, it was merely a matter of adjustment of amounts. They had paid the bank by draft.

Q. You saw nothing there that struck you as not being for material or for labour or for service in connection with the actual work of construction? A. All the accounts seemed to be for the dam.

Q. The sum that you mentioned just now does not include the cost of the plant? A. The $334,000 represents the total amount that Kirby & Stewart spent for the work there which will include what they paid for the plant.

Q. And which the Government proposes to pay for? The Government have taken over the plant, but they take over the plant at the valuation of Mr. Griffiths.

That was one of the reasons why we concluded that the payment might be made for the work done on contract price, namely, that they had valued the plant.

By the Chairman:

Q. That is one reason why you considered that the word "reasonable" had to be taken into consideration, that in paying for the plant they had only been allowed for the actual value of the plant? A. The value as Mr. Griffiths gives it there, that there was no necessity of valuing it if they took it over at the actual cost to Kirby & Stewart.

Q. On the debit side of the account of Kirby & Stewart dated October 19, 1911, referred to above, the first item was $334,572 in the words "total cost of work," and that is the full absolute expenditure for the plant? A. Yes, vouchers.

Q. Then, in the credit side of the statement, they put $34,298.95, as being received from the Government on that appraisement which had been made? A. Yes.

Q. They would seem, on the account, to have charged in the first item the difference between what they obtained by the appraisement, and what the thing cost them? A. Oh yes, and which they said should go into the cost of the work as depreciation of plant.

Q. So that, if that contention were right, they would be receiving first, all their expenditure? A. Yes.

Q. Then they would be receiving the value of the plant on the ground, as appraised? A. Yes.

Q. And then they would furthermore be receiving, as part of the cost the depreciation of the plant in the meantime? A. Yes.

Q. So that if their contention for actual cost were the right one, the shorter way would be to say that they should be paid the full expenditure they had made and the plant should be taken over by the Government as part of their property? A. I should think so.

Q. In other words you would simply have found that their total expenditure on the work was so much? A. Yes.

Q. You would have assumed the work and with the work you would have assumed everything on the work? A. Yes.

Q. And the total amount of expenditure would simply have been paid? A. Yes.

Q. For that reason you contended that they were to be paid the reasonable cost of their work and that the actual would probably mean cost according to the contract price. Of course that would still leave open the question whether the depreciation of plant on the premises was not a portion of the reasonable cost if the work had been done economically? A. Yes.

Q. The dispute would simply come down to this: Whether where they had done work that cost more than it should have cost they should be paid for it or should lose it? A. Exactly.

Q. Upon that point you have no instructions? A. Well, personally, I should think—

Q. I do not ask you what you think; I am asking if you have received any instructions on that point? A. No. I may say that included in that $334,000 are items of interest which they had paid the bank and which if the accounts were to come up again we would not allow.

Q. Would that come to a large amount on the total? A. I think it would amount to over $10,000, probably more, I cannot tell exactly.

Q. That would not be part of the total cost; it might cost them that to run the business but it would not be a part of the natural cost of the business if they had money to pay for it instead of borrowing it? A. Exactly, it is included in the $334,000.

By Mr. Lake:

Q. Does that include the fifteen per cent profit? A. No, the fifteen per cent profit on the unwatering appears up here (indicating). The amount here is $225,000. whereas up here it is $217,000. The $225,000 balance does include the fifteen per cent.

Q. In reference to the Order in Council which directs that the work already executed which may be considered as absolutely necessary be paid for at actual and reasonable cost, has any question arisen between you as to what these words "which may be considered absolutely necessary" refer to? A. Between whom?

Q. Between you and the contractors. A. There was no mention of that.

Q. As that reads, without any comma, it might mean that only that portion of the work which may be considered as absolutely necessary should be paid for? A. Yes.

Q. There may have been a certain amount of work which was not necessary? A. Exactly.

Q. Is that as well to be paid for? A. We do not know anything about any work that is not absolutely necessary.

Q. You have not gone into that question? A. No.

By the Chairman:

Q. You did not direct your inquiry to find out whether there was anything that was not actually necessary? A. No, we merely compared their vouchers with their voucher book and with the cheques.

Q. If these words are open to the interpretation which Mr. Lake has just suggested, it would still have to be inquired into how much of the work charged for in the contractors' account was absolutely necessary? A. It would be a question for the engineers to decide. It is a very ambiguous sentence; it has always been so for us.

By Mr. Ducharme:

Q. Do you know anything about the first objection made by the Auditor General objecting to the contract being let without new tenders? A. I had nothing to do with it at the time; I was not working on it at the time.

Witness retired.

JOSEPH MURRAY CHALIFOUR, sworn:

Examined by The Chairman:

Q. You are employed in the Public Works Department? A. Yes, sir.

Q. What is your position? A. I am Auditor or Examiner of Accounts for the Chief Engineer's Branch.

Q. You have been engaged with Mr. Douglas and with Mr. Donnelly partially in examining the claims made by Kirby & Stewart concerning the Timiskaming Dam? A. Yes, sir.

Q. And the account dated October 19th, 1911, was the basis of your inquiry? A. Yes.

Q. We understood that about the 8th of December, you ceased work on that and have done nothing since? A. Yes, it was about the 8th of December we stopped work on that.

Q. I want to shorten the inquiry as much as possible, Mr. Douglas tells us that you found the main claim $334,000 correct as to amount, except in two particulars, there being an error of about $2,000 in the calculation and that it included about $10,000 of interest to the bank for loans given to them from time to time? A. Yes.

Q. He also says that that claim by them included the total amount which they had paid for plant? A. Yes.

Q. And as they were allowed and paid for the value of the plant as estimated by Mr. Griffiths, there would still remain in their claim a sum which represented the depreciation in the plant in the meantime? A. Yes.

Q. Which they contended they should be allowed as part of the cost of the actual work done by them? A. Yes.

Q. And then Mr. Douglas says that the work ceased because the Order in Council authorizing the payment said that the contractors were to be paid the actual and reasonable cost, and there was a dispute as to what was the precise meaning of these words? A. Yes.

Q. The representative of Kirby & Stewart claimed that all you had to do with it was to find what was the actual cost? A. Yes.

Q. You examined the vouchers in detail showing the amounts? A. Yes.

Q. There were bills and receipts and so forth for each of the items? A. Yes.

Q. And you went through them? A. Yes.

Q. When you got a bill and a receipt for the bill did you go any further to ascertain whether there had been an actual delivery of the articles, or did you just assume that they were all delivered? A. We just assumed there was delivery.

Q. In other words, when a voucher was produced in the regular form and receipted in a proper way you concluded they had paid for it that amount? A. Yes.

Q. Did you go to the extent of looking into the cheque books to see whether the payments had been made? A. Every voucher produced receipted carried its cheque in payment. Attached to the account was the returned cheque from the bank or the accepted draft.

Q. So you were satisfied that there had been an actual expenditure for the amount claimed? A. Yes, by the vouchers produced I was satisfied that they had incurred that expenditure; that is about the amount spent on the work by the contractors.

Q. Did you see anything whatever in this to excite your suspicion at all? A. No, not in the vouchers.

Q. Attention has been called here to an Order in Council dated August 11, 1911, under which you acted, and it contains these words:—

> "Also that the work already executed which may be considered absolutely necessary be paid for at its actual and reasonable cost."

Regarding the work "which may be considered absolutely necessary," did you in your inquiry endeavour to find out what work was absolutely necessary? A. No, that is a question for the Engineers of the Department.

Q. You simply directed yourself to find the total expenditure? A. The total expenditure and more especially in connection with the unwatering, as at the time of the account nothing was decided as to the meaning of these words and the action the Department would take in connection with it, and my view of the examination was more towards passing the last accounts in connection with the amount of $61,000 for unwatering.

Q. You had that more in mind? A. Yes.

Q. But that did not prevent you from carefully examining the others? A. Carefully examining all the other vouchers.

By Mr. Ducharme:

Q. You went through that account? A. Yes.

Q. That is for the whole amount of work done from the beginning by the contractors? A. Yes.

Q. I want to know if the $334,000 was obtained by making a calculation as to the amount of work performed by the contractors? A. No, it is arrived at by the

contractors from their books, by the amount expended by them, the actual cash paid out by them on the whole work from beginning to end.

Q. Can you tell me if in that item there is anything for lumber? A. There are thousands of dollars worth of lumber. That covered every bit of material and every hour of labour that has been put there. It also covers some expenses at headquarters here, travelling expenses for the contractors, and interest paid the bank for borrowing money.

Q. The contractors are paid their travelling expenses to and from the work? A. Yes.

By Mr. Lake:

Q. Did they not pay themselves a salary? A. No.

By Mr. Ducharme:

Q. They were given out the contract in November, 1908. The second Order in Council is passed on the 30th March, 1909. Now, the contractors claim that while this change was taking place with the idea of building a wooden dam, they bought $20,000 or $30,000 worth of timber. I want to know if that was included? A. Everything. It was used in the dam, it was paid on the progress estimates.

By the Chairman:

Q. Take that charge for timber. You had no means of ascertaining whether the timber paid for was actually used in the dam or not? A. No, but our Engineer would have personal knowledge of that, the Engineer on the work would know.

Q. Did he certify that it had been used in the dam? A. No, he would not I suppose certify that it had been used in the dam, but in his progress estimates every month he would put in so much timber and so on.

Q. When you came to look at the total bill and found so much lumber charged, did you compare your progress estimates with the total charge to see if it was all accounted for or not? A. No.

Q. And Mr. Donnelly would not be there to certify whether it had all been accounted for or not? A. No.

Q. You just assumed from the bill that everything charged had been used? A. We assumed from the bill that everything charged was used. As far as we were concerned our duty was to look at these bills and see whether they appeared to be correct and if they were proper charges against the dam.

Q. Upon that one point as to whether they were proper charges against the dam would depend upon whether they were used in the dam? A. As long as they were shipped there and delivered there—

Q. You assumed they went into the dam then? A. Yes, just assuming.

Q. And the question may be raised by some one else whether actually they did go into the dam or not? A. Yes.

Q. What is the name of the Engineer who would know that? I suppose Mr. Donnelly would know.

By Mr. Ducharme:

Q. Whether the lumber is there or not, Mr. Donnelly will tell us that? A. Mr. Donnelly will know exactly what lumber there is; the amount of lumber that has gone into the previous coffer dam, and the amount of lumber that has gone into the present coffer dam because he was on the work all the time and made it his business to look after that.

Q. Mr. Griffiths appraised the machinery? A. Mr. Griffiths appraised the machinery, and appraised the whole plant and material on the ground. That $34,000 is made up of a steam shovel, and a cable way and a winch, and a blacksmith shop and camps and some material on the ground and some in store.

Q. Supposing there was some cement there would Mr. Griffiths put it on his bill? A. Yes.

The CHAIRMAN.—Suppose a large amount of lumber had been brought down and been partly used and had gone away, Mr. Griffiths when he went up there, if there was any on the ground, would estimate what was on the ground, and that would be paid for as plant, but he would not enter into a calculation of how much had been used?

Mr. DUCHARME.—Yes, but I am putting this question to the witness—taking it for granted that there was a certain amount of lumber there which came from the dam and was appraised by Mr. Griffiths, would we not be paying for it twice, paying to the contractor plus fifteen per cent and paying for it as part of the plant?

The CHAIRMAN.—No, because what we pay to the contractor is credited to us, and so we do not pay it twice.

Mr. LAKE.—They purchased a certain amount of timber and you saw their vouchers for it, and find that that was used for the building of a shanty. Now, if we take over that shanty at its appraised value and pay for it, and if we also pay for all the timber that was sent it, are we not paying for the timber in that shanty twice over?

The CHAIRMAN.—No, if they were claiming the total amount and also claiming for the stuff on hand, it would be paid twice over, but they are not. They make a claim for the total amount and then they give credit for $34,000, and consequently they are not getting paid for it twice. Mr. Griffiths would not have anything to do with the timber paid for in the dam that was floated away; he would only estimate the timber on the ground when he went there.

By Mr. Lake:

Q. I see that, but the other point appears to be still doubtful. You give them credit for every cent they paid for the purchase of timber, and if they used part of that timber in constructing shanties, and you buy the shanties, is the Government credited with that? A. Yes.

Q. Then Mr. Griffiths goes out and says: I calculate the value of these shanties and cook-houses at so many thousand dollars, and that is allowed.

The CHAIRMAN.—That is not allowed, the contractors are charged with it in the account. They are allowed for the total expenditures, and then when they are paid, what is estimated on the ground that is deducted from the total expenditure, and they are only asking the balance.

Mr. CHALIFOUR.—They claimed the total expenditures, that is their own claim.

The CHAIRMAN.—And we come in and pay part of it and then they said: We will give you credit for the part you paid, and having got paid for the lumber on the ground they don't claim for it a second time.

Mr. DUCHARME.—And we are losing whatever quantity of lumber was lost. We are paying for whatever lumber may have been sold to lumbermen or others. I do not say there was any, but we have to find that out. What Mr. Donnelly should do is to look at the bills for the lumber and say what was used and what was left and see whether they agree; that is the point.

Witness retired.

HAROLD HIGMAN DONNELLY, sworn:

Examined by the Chairman:

Q. By profession you are an engineer? A. Yes, sir, a Civil Engineer.

Q. How old are you? A. Twenty-four years.

Q. How long have you been engaged on the Timiskaming Dam? A. Since October, 1909.

Q. At that time you were about twenty-one years of age? A. Yes, sir.

Q. When did you graduate? A. I graduated from the Royal Military College in 1908.

Q. Was this your first practical work? A. No, sir, I had seen a good deal.

Q. I mean after leaving college, was this the first job you went on to? A. I worked in a shipyard after I left college.

Q. But when you entered the service of the Government you went on this work? A. Yes, sir.

Q. Who engaged you to go on the work? A. I came to Ottawa. I saw Mr. Goodwin, Assistant Superintendent of Dredging, and he introduced me to Mr. Coutlee and Mr. Coutlee sent me to Timiskaming.

Q. You said you had some practical experience? A. Yes, sir, I had a good deal.

Q. While you were going through the Military College? A. I worked with my people in Kingston, The Donnelly Dredging Company, and I started in when I was about twelve years old.

Q. How long were you at the Military College? A. Three years.

Q. During the time there would you have any practical work? A. Yes, sir, a good deal of practical work.

Q. Had you ever anything to do with dam building? A. Not at the Military College but with my own people in Kingston, we had hydraulic work, which is building docks and waterworks.

Q. That would be in still water on the lake? A. Yes, sir, and in the currents of the St. Lawrence.

Q. What did your do there? A. My people are in the salvage business and we worked a good deal in taking boats off the shore.

Q. Did you ever build a dam in a riverway such as at Timiskaming? A. No, sir.

Q. This was your first experience in that line? A. Yes, sir, placing cribwork in the current there. The handling of the cribs is much the same all over only there would be less weight to handle; it is something the same as taking boats off the shores down in the St. Lawrence currents.

Q. That is to say, if you are taking out cribwork, and attempting to sink it and hold it in the current, it would be something like lifting a vessel in the St. Lawrence? A. Yes.

Q. That remark would apply to any cribwork done in building a coffer dam? A. Yes.

Q. It would not have anything to do with the construction of the concrete dam itself? A. No, sir, but the concrete work is done in the dry.

Q. And is not of itself a very difficult work? A. Not when it is of the ordinary kind.

Q. And the practical difficulties that were reached in the Timiskaming dam were in connection with the coffer work on the Quebec side? A. Yes, sir.

Q. Your real difficulty had occurred there I suppose by scouring of the bottom? A. Yes, we have had more trouble this year and last in that line.

Q. And as to that class of work, such as obtaining a coffer dam in a riverway of that kind, and difficulties from scouring, and from the formation of the subsoil, would not have any relation to your experience in raising vessels on the St. Lawrence? A. No, but the handling of the cribs to get the cribs in place, that is the most critical part of the work.

Q. Were you at the Timiskaming dam when it was swept away in the beginning of 1911?- A. Yes, sir.

Q. You were up there at the time? A. Yes, sir.

Q. The water rose more than usually high?- A. It was within eight or nine inches of extreme high water.

Q. By which you mean what? A. The extreme high water level of Lake Temiskaming.

Q. You mean past records or ordinary records?- A. Records for forty years.

Q. You mean to say it was within what it had reached during that time?—A. Yes, so far as it was known.

Q. Would it be somewhat higher than an ordinary spring freshet?- A. Yes, sir.

Q. The coffer dam on the Ontario side had been taken out the previous year had it not? A. The previous year, but the coffer dam in the Quebec channel was one-half in before that was taken out.

Q. What I am getting to is this: at the time that the Quebec coffer dam was swept away there was nothing on the Ontario side to stop the water except the dam itself? A. There is a much increased channel over there, but the amount of water flowing down the Ontario channel at that time, although there was a concrete dam across it, would be as great or greater than in previous seasons before the work began at all.

Q. Not with the two channels unobstructed? I am talking about the amount that was going down the Ontario side?- A. Oh, yes, sir.

Q. Besides building the dam on the Ontario side the channel had been excavated out and the boulders cleared away and so forth? A. Yes.

Q. So that there was a greatly increased flow on the Ontario side? A. Yes.

Q. The water on the Ontario side during that freshet would be going over the Ontario side of the dam with a great head? A. Yes, sir, going through the sluices.

Q. Of course, the sluices were open? The amount of water that went over the coffer dam and then went through on the Quebec side would not be greater than usual in freshet water? A. You mean after the dam broke or before?

Q. When the dam broke was the rush of water coming on the Quebec side greater than in previous years before the other dam was put there? A. Only part of the coffer dam went away on the Quebec side and that left approximately one-half of the Quebec channel still obstructed, and we thought that what was going through on the Ontario side about made up for the obstruction on the Quebec side.

Q. Tell me this; am I to judge from what you say that it was not the great quantity of water on the Quebec side that carried away a part of the coffer dam but the water getting under the coffer dam? A. The coffer dam gave way on the shore end.

Q. That is on the Quebec side? A. Yes, there was about a fifteen-foot head there and out in the centre there was about twenty-eight-foot head, and the piers were not a great deal heavier and so we assumed that the water going over the top of the coffer dam got down under and scoured the bottom.

Q. The island end of the Quebec coffer dam remained? A. Yes, sir.

Q. And the weight of water going over that did not disturb that? No, sir.

Q. The level of the coffer dam would be about the same all the way across? A. Yes, sir.

Q. And there would be as much water going over on the island side as on the shore side? A. Yes, sir.

Q. So that would look as if the difficulties had been caused at the bottom? A. Yes, sir, and we have also seen since, we have had that channel nearly unwatered now, that the Quebec side is scoured out a great deal right along the shore.

Q. Is that because of difficulties in the bottom or some peculiar twist of the current? A. It looks as if the dam was not quite so solid on that side.

Q. When did you start in the work on the Timiskaming Dam? A. October 6, 1909.

Q. Who was there in your place before you went there? A. A. J. Matheson.

Q. When did he leave there? A. He left there to go into private practice as a consulting engineer.

Q. Was he a young man? A. I should judge he was forty-three or forty-five years.

Q. Where is he now? A. He is in Vancouver.

Q. Have you stayed on the work ever since? A. Yes, sir.

Q. Now as to the time you went to work, what was the condition of the work, how much had been done? A. There were two pits dug, one on each side of the Ontario side, some six thousand yards of material.

Q. One on the island and one on the shore? A. One on the Ontario shore and one on the island.

Q. That was where the concrete dam would commence and end? A. Yes, they were just pits that one derrick could reach.

Q. Would the river flow in and out of them? A. There was a little seepage but not much.

Q. Do you mean to tell me that at that time there was none of the concrete work done at all? A. No, sir.

Q. Was there any coffer damming done at that time? A. No, the channel is practically dry at that time of the year.

Q. When does the dry season begin? A. The water would drop sufficiently about the end of September.

Q. Up to the end of September during that summer, you were there, can you tell us what was going on there? A. I believe the contractors were getting their plant on the island.

Q. All summer? A. Yes.

Q. You would not have to wait on the Ontario side for the water to get down to do proper dam work? A. No, sir.

Q. And the coffer dam work on that side how was it done, was it by building cribs and floating them out? A. Yes, sir.

Q. On the Ontario side it was actually done that way? A. Yes, sir.

Q. The coffer dam would be how far north of the site of the dam? A. Three hundred and fifty feet.

Q. And every bit of it was actually built by floating it out and sinking it? A. At the shore end of course, which would be built in place.

Q. It would be sunk and filled with rock I suppose? A. Yes.

Q. What would be outside of it? Planking? A. Yes, or sheeting.

Q. You would put sheeting along the front part of the crib? A. Yes, sir.

Q. Outside of the sheeting would earth be put down? A. Yes, sir.

Q. The river would keep that earth down like an ordinary old-fashioned mill dam? A. Yes, the sheeting is vertical in this case, whereas in the old mill dam it was slanting?

Q. Just simply put down on the bottom or driven into the bottom? A. It could not be driven because of the boulders.

Q. If your coffer damming was done in that way, was any pumping necessary or did the thing just dry itself out? A. It was pumped out and there was a very little leakage, but perhaps a week after they had it pumped out, the water dropped away from the coffer dam sufficiently to leave the natural bottom to hold the water.

Q. When was the coffer dam on the Ontario side completed? A. About the end of June, 1910.

Q. And until that was completed was any concrete work done in the dam itself? A. Yes, sir.

Q. When would that be done? A. That would be done in February, 1910, and the work went on up to the 1st of May, 1910, and then the spring freshets came on and flooded the foundation.

Q. The water coming over the dam? A. There was no coffer dam required before.

Q. You said the spring freshet came on in 1910? A. Yes, sir. The excavation was taken out in October and December of 1909, and January of 1910, and then some concrete work was done.

Q. That was all before the coffer dam? A. Yes, so far the coffer dam was not required there, and when the spring water came up, about the end of April, or perhaps the 15th of May it may be, the water came over the natural bottom and flooded the foundation. That was allowed to run for some two or three weeks and then the coffer dam was started on the upper Ontario Channel.

Q. How long did it take to build the coffer dam across the Ontario channel from start to finish? A. About two weeks.

Q. After it was completed you started and dried it to finish with the concrete? A. Yes.

Q. When was that finished? A. The concrete was all finished on the 15th September, 1910.

Q. On the Ontario side? A. Yes, sir.

Q. That was practically one year after you went on the work? A. Yes, sir.

Q. To the best of your knowledge and belief, after what you saw when you went there, is there any reasonable explanation of the long delay between May, 1909, when they began to work, and October, 1909, when you got there? A. The contractors' methods seemed primitive.

Q. That was five months, and up to that time except the two pits you speak of, there had not been a stroke of work done on the thing itself? A. Of course, it would take a month to build camps and get heavy machinery. It was a very awkward place to get machinery, and the whole island was very thick bush at the time.

Q. Could the work have been done from the Ontario side before getting machinery across to the island; could they not have gone on at the same time? A. They required a certain amount of machinery there to carry on the work.

Q. A certain amount of machinery where? A. To carry on the work right at the site.

Q. Yes, I know, but could not actual work in excavation and otherwise have been carried on on the Ontario shore even while they were getting their machinery over to the island; could not the two go on at the same time? A. Well, they would require certain machinery such as hoists and derricks to excavate the excavation.

Q. On the island side? A. On either side.

Q. Did they use the same derricks and machinery on both sides? A. Not the same, but they had two derricks up when I got there, one on one side and one on the other.

Q. Could not they have a derrick up on the shore side and continued doing the work before they got the derrick up on the island side? A. I believe they could, but I do not know exactly the conditions when they started.

By Mr. Lake:

Q. About how many men had the contractors on the work when you got there? A. They had about sixty men.

Q. You don't know how long they had been there? A. Only just from hearsay.

Q. Had they increased in number? A. Yes.

Q. You had heard that the contractors commenced to bring in their machinery and so forth the previous May? A. Yes.

Q. What I want to ask you is this: whether if they had been anxious to build and expeditious, and had taken hold of the work vigorously, a great deal more might have been done before you got there? A. I believe a great deal more could be done.

By the Chairman:

Q. Now, then, after you got there, from October until the next September, when the Ontario side was done, what was the progress of the work, satisfactory or otherwise? A. When they got the steam shovel in in November, 1909, the work seemed to go better.

Q. Up to that time, from October to November, while you were there, had the work been going on satisfactorily? A. No, it seemed very slow.

Q. It went better after you got the steam shovel? A. Yes, sir.

Q. It did continue all winter? A. Yes, sir.

Q. Steadily? A. Very steadily.

Q. What number of men would there be all winter? A. It was considerably increased, perhaps there would be 125 men.

Q. At what time? A. The force was increased in the end of November, I believe.

Q. In the spring of 1910 and the summer of 1910, up until the time that work was finished on the Ontario side, would the force be about that size? A. No, about June or July, 1910, the force was increased to about 225 men.

Q. Why could that same number not have been used there before? A. There is no reason that I know of.

Q. Putting concrete in the winter time, in the month of February we will say, in that river, how did you guard against frost? A. The concrete was covered with boards and then tarpaulin put over the boards to make them seam tight and coils were put in and live steam kept there.

Q. Had it been contemplated in the original contract that the work was to go on in the winter, or was it an extra that was provided for? A. I do not remember that the concrete should be laid in winter, but the specification I believe said that all precautions should be taken to prevent freezing of the concrete if it were laid in winter.

Q. That might imply it was going to be laid in winter? A. Yes.

Q. So far as the housing and heating was concerned, on the Ontario side, the contractors made no claim for special payment? A. They made a claim for a patch about twenty feet by twenty feet, and that had been frozen in the winter, and it was picked off in the spring and they could only get off about six or nine inches and they made a claim for that.

Q. I mean to say they made no claim for the housing and the heating on the Ontario side? A. They made a claim for digging a trench in frozen material.

Q. You have already referred to that? A. No, this is excavating as a deep cut or trench that went below the foundation of the bottom. They had to dig that out of frozen material, and it was slow work.

Q. The actual housing and heating of the concrete on the Ontario side was part of their contract and was paid for in the price of concrete? A. Yes, sir.

Q. Have you any means of knowing exactly what the coffer damming on the Ontario side cost? A. Not on the Ontario side.

Q. You have never tried even to form an estimate of what it cost? A. No, sir.

Q. How many men would be there during the two weeks that coffer damming was going on? A. A little less than one hundred; ninety men perhaps.

Q. How much was paid to these men per day? A. The labour averaged about $1.75 per day and their board would cost from forty cents to fifty cents and that would be about $2.20 or $2.25 per day, and the material that they would pay for would be wood.

Q. And these men would be engaged in blasting, and taking the boulders out of the dam. Would any blasting be necessary? A. Yes, sir.

Q. Then their estimate of material for the coffer damming would be the timber? A. Timber and earth.

Q. I suppose they would have horses engaged drawing the earth? A. Yes.

Q. How many horses would they have on the job? A. About three teams at that time.

Q. These would be their own horses? A. Yes.

Q. You have an appointment to act with an accountant from the Audtor General's office and another from the Public Works Department to examine the accounts of Kirby & Stewart? A. Yes, sir.

Q. The work having been taken over from them? A. Yes, sir.

Q. Did you assist the Accountant to some extent? A. I was in Ottawa last fall for a few days and it was not considered at the time that I was required; they were simply examining the books at that time.

Q. When do you mean? A. In November, 1911.

Q. Among the charges in the account of Kirby & Stewart as items for which they have paid, there is a large amount for timber used by them? A. Yes, sir.

Q. Could you by examining these bills for the timber which they have charged for, and by your knowledge of the coffer dam at both sides, form some idea, a pretty correct idea, as to whether the whole amount of timber they have paid for was used in the coffer damming? A. Of course you will find on the one side they have paid for so much timber, and on the other side you will find there was some of that timber on hand and taken over in the plant.

Q. Could you form some idea? A. Yes, sir, we could measure the cribs in place.

Q. The difference between what they paid for and what was left on hand ought to be either in the cribwork or wasted and gone away? A. Yes, sir.

Q. What I mean to say is, can you find out whether all the bills for wood and material can be accounted for? A. We measured their cribs that they built on the shore and that crib was taken out and put into place and then built up.

Q. I want you before you go away to see how much timber is charged for in Kirby & Stewart's claim and how much of that timber you can account for as being used or left there and taken over by the Government; do you understand what I mean? A. Do you mean before I leave Ottawa?

Q. Yes, before you leave Ottawa this time. With the assistance of Mr. Chalifour you can get the books and see how much is charged in Kirby & Stewart's bill and you can estimate what was used and let us know. Have you any datas from which you could tell the amount of cement that they had used up there? A. Yes, sir.

Q. Did you get a list of that? A. We measured all the work.

Q. Can you compare that with Kirby & Stewart's account and see whether all they have charged for was used? A. Yes.

Q. Well, do the same thing with that as with the wood. Across the island, from the island end of the Ontario dam to the island end of the Quebec dam, what sort of a structure was put up? A. An earth filling there.

Q. Just an earth filling? A. Yes, sir. Of course it had a wooden trestle in the centre.

Q. Along which the cars ran for the earth filling? A. Yes, of course there was some loose rock in that.

Q. At high water, does not the river overflow the end of the island? A. Yes, but it would not come up as far as this earth filling.

Q. In very high water, the highest flood that has ever been known, I understand a very little of the island is uncovered? A. The earth filling is just the centre portion. I suppose with a cement dam built and sluices all open, there would be no danger of that earth fill being washed away; I suppose the water would not then come to it? A. No.

Q. And while the coffer dam is put on the Quebec side in case of a heavy freshet, would there be any danger whatever in the island being flooded now? A. It might be flooded, but there would still be lots of room on the island.

Q. There would be no danger of this embankment being interfered with by the water anyway? A. No, we had very high water and the embankment was not interfered with.

Q. Now, on the Quebec side, is the coffer damming completed? A. Practically completed. Of course there is always a certain amount of work to make the final stage.

Q. Have the cribs been put all the way across? A. Yes, sir.

Q. And the sheeting driven down? A. Yes, sir.

Q. And the filling with earth outside? A. Yes, sir.

Q. What work are you doing now? A. We are completing the second dam, what we call the pocket dam; there is some earth filling to be placed in that yet.

Q. What is that? A. It is only about half as high as the main dam below it. There is a better chance there to make the bottom of the sheeting tight, working in still water, or nearly still water, and this second dam, or pocket dam, holds the water up about eight feet and then the water is taken off in a trough and perhaps only quarter the amount of pumping is required to dry the pit.

Q. That would be water between the first coffer dam and the second coffer dam? A. Yes, sir.

Q. What is the idea of that, is it to make the first coffer dam safer? A. The first coffe dam has a certain amount of leakage in it, and this leakage is too much to be handled by the ordinary pumping.

Q. The result of that would be that you expect to get a dry place for the cement? A. Yes, below the second dam.

Q. Has the concrete work on the Quebec side been commenced? A. No, sir, there is excavation and pile driving to be done.

Q. Have you commenced that? A. I had a pile driver in position and the water is still in the foundation of the pit.

Q. You mean the foundation pit for the concrete dam? A. Yes.

Q. Into which you are driving these piles? A. Yes.

Q. Are these piles to be surrounded by concrete? A. They would be placed above the concrete for a cut-off wall into the material, the bottom is considerably softer on that side than on the Ontario side.

Q. Will they be left there all the time? A. Yes, sir.

Q. And you drive them as far as you can? A. Yes, sir.

Q. The actual work of laying down the cement has not been begun on the Quebec side at all? A. No, sir.

Q. How many men have you employed? A. About 130 to 140.

Q. Is that all that can be used? A. As soon as we can use more men, it will be no doubt in a short time, we are putting in about forty men more.

Q. Can they be easily got? A. Yes, sir.

Q. Are they living around there? A. No, we have to send out for them; we get a good many in Ottawa.

Q. You have no trouble at all in getting as many men as you want? A. No, sir.

Q. You can put on as many as can be employed on the work? A. Yes, sir.

Q. When do you expect to begin the actual cement work? A. It is hard to say, it depends upon how the pile driving goes.

Q. Do you mean to say how quickly it can be done or the extent of it? A. How quickly it can be done.

Q. Is there much pile driving to be done? A. Yes, sir.

Q. On both ends, in the centre, or where? A. Above the concrete and below.

Q. All the way across? A. Yes, sir, if we can.

Q. Where do you find the greatest depth of material soft enough to drive into; in the middle or on the end of the work? A. On the island end, so far.

Q. You are going to have in front of the back of the slab a cut-off wall? A. Yes.

Q. Is this concrete driven in front of the cut-off wall? A. All the concrete will be inside of these two lines of piles.

Q. About how deep are these cut-off walls to be? A. Ten feet across.

Q. Ten feet from the top to the bottom? A. We will clean off the bottom to get a grade right across and ten feet below that grade.

Q. The slab will be three feet thick and then this cut-off wall, where you can, will be ten feet below that making thirteen feet? A. Yes, sir.

Q. Will your piles go lower than that thirteen feet? A. We expect they will go perhaps six feet below the thirteen feet.

Q. You have got down now to September, 1910, when you finished the Ontario side; what was the next work undertaken? A. While the work in the Ontario channel was being completed the coffer dam and crib work was started in the Quebec channel.

Q. That would be 1910, about what month? A. About the 15th of December.

Q. Now then, you have the contract begun and the men on the ground in May, 1909, and the Quebec end started, only in September, 1910; more than two seasons has gone by up to that time and nothing whatever had been done on the Quebec side? A. Perhaps there would be a few boulders blasted as early as the 1st of December on the Quebec side.

Q. Was there any reason why, if sufficient men had been got, and sufficient material obtained, that a good deal of excavation work and other work could not have been done on the Quebec side? A. The Quebec side excavation was all wet practically.

Q. It remained wet, did it not? A. It was under water until that side could be unwatered by coffer dams.

Q. Was it not possible, and has not a great deal of excavation been done, north of the coffer dam in order to clear the channel and all that sort of thing? A. Not on the Quebec side.

Q. It was on the Ontario side? A. Yes.

Q. It is not intended to do it on the Quebec side? A. The channel is a good deal lower on the Quebec side than on the Ontario side and there was some intended but not much?

Q. The first work to do on the Quebec side would be coffer damming? A. Yes.

Q. And would you say that that would have to be done in order to get the bed of the river dry enough to excavate and clear it out below the coffer dam? A. Yes.

Q. Practically nothing could be done on the Quebec side until the Ontario side was finished? A. Yes, sir.

Q. You would have to be ready, I suppose, to take away the coffer dam on the Ontario side before you would build a coffer dam on the Quebec side, so as to let the water go? A. Yes.

Q. Until you took away the Ontario coffer dam there would be no outlet for the water ? A. No, sir, but the Ontario dam had to be held in until the work was finished on the Ontario side.

Q. When was the Ontario coffer dam taken away? A. On the 18th of October, 1910.

Q. How was it taken away? A. It was taken away by dynamite.

Q. And allowed to go down stream? A. Yes.

Q. And it went out with a rush of water and went through the cement dam and so on? A. Yes, and then the contractors continued to build up more of the dam on the shore end until finally the whole of the dam was out?

Q. The material in that case would all be wasted? A. Yes; it would practically be of no use except for firewood.

Q. You started then in October, 1910, with the coffer dam on the Quebec side? A. No, the shore end was started a little before.

Q. In December? A. Yes.

Q. I notice in a report by you dated 28th November, 1910, you refer to dredge excavation which had taken place. What dredge excavation is that? A. That is on the Ontario side.

Q. Done by the Government, I suppose? A. Yes, sir.

Q. I show you a report dated December 12, 1910, covering from April to November, is that your report or Mr. Coutlee's report? A. Mr. Coutlee's. Parts of it may be taken out of my report to Mr. Coutlee.

Q. Well, there was an arrangement with the Government about the housing and heating of the work which Kirby & Stewart were undertaking in the fall of 1910 on the Quebec side? A. Yes, sir.

Q. That would be housing and heating of concrete? A. Yes, sir.

Q. Was any concrete done on the Quebec side by them? A. Only a few yards.

Q. Is that on the island side or on the shore side? A. On the island side. And it was done in the spring.

Q. It was done in the spring of what year? A. 1911.

Q. Just before the dam broke? Yes.

Q. I find this in the contract:—

"Winter work; concrete will be laid during freezing weather only under written instructions as to the precautions to prevent freezing. Work will be stopped and resumed as directed and the material and plant will be kept heated and a mixture of salt will be added."

—there was a provision in the original contract that if desired the material would be kept housed and heated at the expense of the contractors.

The Commission adjourned until Wednesday, January the 24th, when the examination was continued.

OTTAWA, WEDNESDAY, January 24, 1912.

PRESENT:

Honourable A. B. MORINE, K.C., *Chairman.*
G. N. DUCHARME, Esq., } *Commissioners.*
R. S. LAKE, Esq., }

The examination of Mr. Donnelly, Engineer of the Timiskaming Dam, was continued from the previous evening.

HAROLD HIGMAN DONNELLY.

By the Chairman:

Q. Were you dealing with the question of housing and heating on the Quebec side, when the work was begun at the end of 1910. I think you said that prior to the going out of the coffer dam on the Quebec side there was very little cement or concrete work done? A. Yes, sir.

Q. Had that been done in the cold season when housing and heating was necessary? A. No, that was done some time in April.

Q. So there really was no housing and heating done? A. No, sir.

Q. I notice in the account of Kirby & Stewart there is an item for the heating of the building of $2,422.29? A. Yes, sir.

Q. What building would that be? A. That is material for heating building. They were ordered to have the material on hand, the lumber and steam coils so as to be ready to erect a building over the concrete and heat it.

Q. That was on hand and has been taken over by the Government? A. Yes, sir.

Q. And that material would form part of the plant valued by Mr. Griffiths? A. No, sir, it does not come under the heading of plant.

Q. Has any account of it been taken in order to see what value it was? A. Yes, sir, it was checked when it was delivered on the work.

Q. And of course the charge for it is included in the general amount which the contractors are asking for? A. Yes, sir.

Q. In the summer of 1911 the Department commenced the work of coffer damming on its own account across the Quebec Channel? A. There was no preparation made until some time in August, late in the summer.

Q. When it was undertaken under the foremanship of Filion? A. Yes, sir.

Q. And under your direct charge? A. He had direct charge of the actual coffer damming.

Q. What was your official designation? A. I am Assistant Engineer to the Engineer in Charge, actually on the ground.

Q. You would be there ordinarily every day of the week? A. Yes, sir.

Q. Mr. Coutlee is the man in charge? A. Yes, sir.

Q. How frequently as a rule would he visit the work A. I could not say off hand, sometimes three or four times a month and at other times not so often, about twice a month.

Q. His headquarters were in Ottawa? A. Yes.

Q. And I suppose, besides his work on that particular dam, he had the oversight of other works? A. Yes, sir.

Q. After the coffer dam went out and until the work was undertaken under the charge of Filion what was being done? A. There was a small gang of men kept working at the Ontario Channel making small improvements there.

Q. Under the Government? A. Yes.

Q .Was anything done by the contractors? A. Yes, we were directing that work, and they were supplying the men and the tools and the material.

Q. Outside of their contract? A. Yes, sir.

Q. What I meant was this: their force was at work on the coffer dam at the time the freshet carried it away? A. Yes, sir.

Q. They were engaged in making it tight? A. The work was changing around about then, from coffer damming to permanent work.

Q. Yes, but they had their staff there? A. Yes.

Q. How many men would there be at that time? A. I believe about 240 or 260 men.

Q. That was in the month of May? A. Yes.

Q. That was the largest party ever there, was it? A. Yes.

Q. Immediately on the dam going out were those men dismissed? A.Yes, a few days after.

Q. And no coffer damming was undertaken? A. Not till the Government started on the work.

Q. Not till the Goverment started on the work? A. No.

Q. Was it not possible to begin preparation for coffer damming? A. The water would be too high to float the cribs out.

Q. But there easily could have been preparations made for the preparation of the cribs? A. We could get timber on hand.

Q. Does that timber require to be cut to lengths and made ready to be put together? A. Some foremen require round timber and others require the timber sawn and squared.

Q. Do you mean that the foreman required some of one kind and some of another? A. Yes. Now, Mr. Filion in charge of the crib building now, preferred to use the square timber.

Q. What I mean is this; if the contractors had merely in view the object of getting the work done as quickly as possible, was there anything they could have gone on to do during the summer in preparation for the coffer damming when the water

went down? A. Yes, sir, if they looked ahead they could get stone filling on hand and timber on hand.

Q. Apparently after the coffer dam went out the contractors acted as if they did not intend to complete the job? A. Yes.

Q. They kind of threw up their hands and didn't care? A. Yes, sir.

By Mr. Lake:

Q. That was your belief at the time? A. That was my thought.

By the Chairman:

Q. Based up on the things that were not done? A. Yes, sir.

Q. Was not timber collected during the summer up to the time that Filion was put on the job? A. No, sir.

Q. Then there would be considerable delay after he went to work to get the timber? A. Yes, sir.

Q. Would that last over several weeks? A. Yes, sir, it would last perhaps two months.

Q. That timber would have to be brought a long distance? A. Some of it was delivered on the work by contract, and some of it brought down about two and one-half miles.

Q. It had to be cut down I suppose? A. Yes, sir.

Q. And specially for that work? A. Yes, sir.

Q. And then what had to be done with it? A. It had to be floated down to the work and sawn there.

Q. Sawed by hand? A. No, sir, there was a sawmill there.

Q. Belonging to whom? A. Belonging to the Government.

Q. As part of the plant? A. Yes, the Government bought a mill and erected it when the work was resumed.

Q. Kirby & Stewart had nothing of the kind there? A. No, sir.

Q. But that could have been done very early in the summer? A. Yes, sir.

Q. Besides the erection of the mill and the getting of the timber, and so forth. Filion would have to prepare for the ballast to sink the crib? A. He would just say what he wanted and the men under my charge would get it.

Q. When I said Filion would have to prepare, what I meant was that the whole work of collecting the stuff had to be started? A. Yes.

Q. And the work done in the bed of the river was by blasting? A. It was done by blasting perhaps 1,500 feet above the coffer dam site.

Q. That took you how long? A. We were able to prepare the stone as fast as it was needed in the cribwork.

Q. What time was the actual work of sinking the cribs possible, what was the earliest that you could have got the cribs floated out? The water, I suppose had to get a little low? Could cribs have been floated out in August, for instance? A. Yes, with more difficulty.

Q. But still it was possible? A. Yes.

Q. What is the lowest time of the water? A. The lowest time is just in March and the middle of April.

Q. From August on, does it keep on getting lower and lower? A. Yes, as a rule.

Q. And you don't expect any increase or freshet until the spring comes? A. At times there is a rise in the lake's surface, sometimes in the fall.

Q. Due to heavy rains? A. Yes.

Q. But that would not be serious? A. Well, it was serious in 1910.

Q. But not in 1911? A. No.

Q. So that the work of coffer damming could have gone along from August right through 1911? A. Yes, sir.

Q. And a considerable time was lost by the fact that active wrok was not commenced to prepare immediately after the dam went out in May, 1911? A. Yes, there was some time lost.

Q. Do you know Kirby & Stewart personally? A. Yes, sir.

Q. Did you know them before you went on the dam work? A. No, sir.

Q. Where did you see them? A. I met both gentlemen on the work at different times.

Q. Were they there regularly, either one of them? A. In 1909, they were there quite frequently, but not in 1910.

Q. Who was there the most frequently, Kirby or Stewart? A. Mr. Kirby.

Q. He was the man who had most to do with the actual operations, was he not? A. He seemed to me to have the most to do with them.

Q. I understand he is what is called a practical man to some extent? A. Yes, sir.

Q. In 1909, he was there oftener than Stewart? A. Yes, I believe he was, until towards the end of the work Mr. Roger was there nearly all the time.

Q. Who was Mr. Roger? A. He is a member of the firm.

Q. Is he a member of the firm or an employee of the firm? A. I understand he is a member of the firm.

Q. In what year was he there pretty nearly all the time? A. At the time of the unwatering of the Quebec Channel.

Q. That would be when? A. 1910.

Q. I see a letter here from Mr. Coutlee to the Deputy Minister, dated the 4th February, 1911, which says:—

> "Mr. Donelly has been trying his best to direct the work at Timiskaming as the Department is paying for the coffer dam, but the contractors, Messrs. Kirby & Stewart, are never upon the work themselves and never have been. Their negligence amounts to a breach of faith with the Department at this critical stage of the operation and I wish to protest emphatically."

A. Yes, it was after that letter was written that Mr. Roger came on the work and stayed there practically all the time.

Q. He was not there before that? A. No, sir.

Q. Was he there at all before that or was it very seldom he was there? A. He might have been there to visit.

By Mr. Lake:

Q. Roger was there from February to May? A. Yes, sir.

By the Chairman:

Q. Is the language just quoted by Mr. Coutlee a fair criticism of the fact? A. Yes, sir, my idea of constructing work is that some member of the firm should be on the work continually.

Q. And you believe that the work suffered in 1910 from the fact that they were not on the work? A. Yes, sir.

Q. In their absence during 1910 who had charge for them of the work? A. They had different superintendents.

Q. Do you mean at different times? A. Yes, sir, I cannot say just when a new man came on. They had four superintendents altogether.

Q. During 1910? A. No, during the time they were at Timiskaming.

Q. Up until Mr. Roger came on the work? A. Yes, sir, the fourth man was in charge there at that time.

Q. Prior to Mr. Roger coming, there had been three men come and gone? A. Yes.

Q. What was the name of the fourth man? A. Charles Chesbro.

Q. What was the name of the man before him? A. Morrison.

Q. Do you know where he belonged? A. He came on the work, I do not know his initials, he came from Peterborough, but I believe he was originally an American.

Q. Was he there in 1910? A. Yes, sir.

Q. How long? A. About three months.

Q. Was it under him that the Quebec coffer dam began? A. No, sir, that was Mr. Chesbro.

Q. The men that were there before had to do with the Ontario side? A. Yes, sir.

Q. What was the name of the man before Morrison? A. MacNair.

Q. And before him? A. Wade.

Q. The general character of these men was that of foremen? A. Called superintendents.

Q. I was speaking, really, of the standing of the men, and whether they were of the foreman class? A. Yes, sir, just outside men.

By Mr. Lake:

Q. Do you know, to your knowledge, the reasons why the superintendents left? A. Wade was dismissed. MacNair died on the work. Morrison had some trouble with the Engineers and resigned, and Chesbro stayed.

By the Chairman:

Q. Generally, up until the time that Roger came on the work, we can say that you were dissatisfied with the progress of the work? A. Yes, sir.

Q. And you did not think that the contractors and their men were up to time and pushing the work as it ought to be pushed? A. Yes, sir.

Q. We find in the minute of Council passed to take the work over from these people altogether that it says they are to be paid for the work done which may be regarded as necessary. In the Order in Council, dated the 11th of August, 1911, the following language occurs:—

> "That the work already executed, which may be considered as absolutely necessary, be paid for at its actual and reasonable cost."

Can you mention any work that was done by Kirby & Stewart that you did not consider absolutely necessary? A. I do not recall any at the time.

Q. You cannot suggest to us what is meant by these words? A. "The work already done which may be considered as absolutely necessary." A. No, sir.

Q. Generally speaking you would say that all the work that was done was absolutely necessary? A. As far as I can remember, of course, their methods at times did not agree with what I would think a right mode of proceeding.

Q. Their methods of doing a particular work in your opinion was sometimes not a right method but the thing that was done would be a necessary thing to be done. I will put it this way: you think the object to be accomplished was a necessary thing, but that the manner of doing it did not always please you? A. Yes, sir.

Q. In what respect would the manner of doing it not be according to your view? A. At times the men were kept doing work that might have been done by machinery or horses.

Q. Would you say generally that in your opinion there was a waste of money in not doing things by machinery which was done by men? A. Oh, yes.

Q. Loss of money and loss of time? A. Yes, sir, but not great loss of money.

Q. There would be a considerable loss of time, I suppose? A. Yes, sir.

Q. Speaking upon the whole, in consequence of the methods which were followed, was there a great loss of time compared with what might have been done if the work had been vigorously prosecuted? A. Yes, sir, on the whole work.

Q. It was not vigourously prosecuted was it? A. No, sir.

Q. If you had had charge of that work for the Government, with the means that could have been got around there in men and material, might the work have been greatly hastened from the outset? A. I believe so.

Q. I find there are the words used also:—"Paid for at its actual and reasonable cost." It would appear that the actual cost might not be the reasonable cost? A. Yes, sir.

Q. In other words that the actual cost might be too costly? A. Yes, sir.

Q. In your opinion, was there in fact a considerable difference between the actual cost of the work done by the contractors and the reasonable cost of that work? A. In the whole work I believe there was.

Q. You have not had time to prepare these memos. that we asked you for last night? A. I will try to get them this afternoon.

The witness then made this statement: I would like to correct a statement I made yesterday afternoon. When we were changing the work from the Ontario Channel to the Quebec Channel, there was no distinct finishing of one and starting of the other. The first part of the Quebec Channel work was being done while the other was being finished and I said yesterday that only the shore end of the coffer dam was built when the Ontario side was blown out, but there was more work done in the Quebec Channel than that. The coffer dam was nearly one-half way across the stream and about three-quarters height before the Ontario coffer dam was put down.

By Mr. Ducharme:

Q. How high was the coffer dam made on the Ontario side? A. About six or seven feet.

Q. You said yesterday that there was but little damage done to the concrete work on account of the frost? A. Very little.

Q. Can you estimate that damage? A. Yes, sir, we have the quantities that were frozen, that were picked off, in my notes in the office.

Q. Can you give us that? A. I could get them from Timiskaming.

Q. What size was the dam built in the Ontario Channel? A. It was about two hundred feet long.

Q. From one shore to the other shore? A. From the Ontario shore to the island shore.

Q. And how high? A. About six or seven feet.

Q. How thick? A. About five feet. Are you referring to the coffer dam?

Q. No, I am referring to the dam that was built, the concrete dam? A. Then I beg your pardon, the piers are five feet wide, they are the same width all the way up and twenty-four feet high.

Q. And the dam itself? A. The concrete is about four hundred and eighty feet long with sluiceways at intervals. The dam is not a continuous structure, naturally the wooden stop-locks are placed between the piers.

Q. How high would the concrete work be? A. Twenty-four feet.

Q. How thick was the dam? A. Five feet.

Q. Your coffer dam was only six or seven feet? A. Yes.

Q. Why was the dam made four hundred and eighty feet long when the coffer dam was only four hundred feet? A. The coffer dam was built on the natural channel, but that channel is to be improved to 400 feet wide, to nearly the width of the main dam.

Q. You say that there was a crib made on the island? What would be the idea of that work? A. That was to join up the two systems of sluiceways.

Q. Was it to come level with the dam itself on both sides? A. Yes, roughly.

Q. How high was that work on the island? A. It varied from three feet to ten feet.

Q. The dredge *Queen* was working there? A. Yes, sir.

Q. Was that dredge there when you arrived on the work? A. It arrived about the same time as I did or perhaps a little before or a little after.

Q. What kind of work does the dredge do there? A. Excavating the upper channel above the Ontario sluice.

Q. Not on this contract work? A. No, sir.

Q. Do you know where the first dam was to be built? A. I know the location.

Q. Is it just as dry there as it was where you built the dam a second time? A. No, sir, there is more water there. There is less water where the dam is being built. There is more water at the head of the island than at the other place.

The CHAIRMAN.—By more water you mean a greater depth of water? A. Yes.

By Mr. Ducharme:

Q. It was more advantageous to change the location? A. Yes.

By the Chairman:

Q. How do you mean more advantageous? A. Half of the work could be done on the dry or nearly dry, at the second location.

Q. And therefore that would be to the advantage of whom? A. It would be to the advantage of the contractor and the Government. The contractors would meet with less difficulty and it was supposed it would be finished sooner.

By Mr. Ducharme:

Q. You saw the second dam in the Ontario channel which is about 480 feet; how long would be the Quebec Channel dam? A. About 415 feet. The Ontario dam is some 75 feet longer than the proposed Quebec dam.

Q. How long would have been the first dam proposed? A. I do not know it would be longer, the wooden dam would be about 1,500 feet.

By the Chairman:

Q. That would include the bulkhead on the island? A. Yes, sir.

Q. And that bulkhead would be on dry land at low water? A. Yes, sir. But the other figures for the concrete of 800 feet do not include the island. The old dam would be 1,100 feet of cribwork and 380 feet of bulkhead.

By Mr. Ducharme:

Q. From the first wooden dam on the Ontario side to the present dam on the Ontario channel, what is the fall? A. There is a rise of from 12 to 14 feet. The natural bottom of the stream was that much deeper where the wooden dam was to be put than it was where the concrete dam was actually put. The bottom where the wooden dam would have been is 14 feet lower than the natural bottom.

Q. Is there not a fall and a swift current there? A. Not naturally on that side.

Q. There was more water where the wooden dam was to be built than at the place where it was actually built? A. Yes, sir.

Q. Therefore the construction of the dam on the present location would not be any more costly than it would have been had the dam been built at the former place? A. Except for the change of material.

Q. Same dam built in the new place would not cost any more than if built in the first location? A. It would have cost less at the second position than it would had it been built at the originally intended place. That is my opinion.

By the Chairman:

Q. You mean to say that that class of work, concrete work, and the depth of water, would be more expensive at the wooden dam site than concrete work at the new site? A. Much more.

By Mr. Lake:

Q. The change of site from the head of the island to where it was finally put would make the work less costly than it would have been in its original position? A. Yes, sir.

By the Chairman:

Q. The concrete work and the foundation would be less expensive to do at the new site than at the old? A. Yes, sir.

Q. Furthermore, if they had started to build a concrete dam at the old site, would not the difficulty of coffer damming have been greater and more expensive than at the new site? A. Yes, sir, much more.

Q. Because as a matter of fact, you could never get the old site dry at any season of the year without coffer damming? A. No, sir.

Q. And to build the concrete dam on the old site right across from the Ontario shore to the Quebec shore would have meant that the coffer dam would have to be built in deep water nearly to the island, right from shore to shore? A. Right from shore to shore.

Q. And then instead of having, as you have on the new site, two comparatively short coffer dams, you would have one long coffer dam all the way? A. Yes, and elaborate precautions would have to be taken to allow the water through one end.

Q. By having the two streams you could coffer dam one and do the work leaving the other open? A. Yes, sir.

Q. But if you had only the one coffer dam from shore to shore, you would have to take extra precautions? A. Yes, sir.

Q. Would not the strain on a coffer dam so long and not buttressed in the middle be very much greater than the strain on two coffer dams such as you built? A. Yes.

By Mr. Lake:

Q. Is the current greater in the Quebec channel than at the head of the island? A. Yes.

Q. Even taking that into consideration, the pressure on the coffer dam in the Quebec channel would not be so great as the pressure on the coffer dam on the first proposed site? A. Of course the pressure on the dam depends just on the height of the water alone. Where the current is stopped the pressure is the same. It is a little harder to place a dam in a current, but once the current is stopped the pressure for the same depths is the same, no matter where it would be.

By the Chairman:

Q. Speaking about that, when it was suggested here by another witness, that on the Quebec side, in consequence of the channel being narrower at the former site than it would have been at the head of the island, there was a much more rapid current, and the witness thought that would make the work of coffer damming much more difficult; what have you to say to that? A. Yes, it would, but at the first proposed site the coffer dam would have to be built ahead of the permanent work, and the depth of water increases as you go north, so that you would have a much higher coffer dam there.

Q. When you use the words "ahead of the permanent work," what do you mean? A. Further up the lake, north.

Q. Do you say that after the coffer dam is built, the strain upon it is a matter entirely of the height of the water? A. Yes, sir.

Q. Because there is no current when the dam is built? A. Yes, sir.

Q. Consequently the increase of difficulty from the current would be small in sinking the piers? A. Yes, sir.

Q. Once you get them sunk and your water stopped, the strain would be a matter of the weight of the water? A. Yes, sir.

Q. In the case of a long coffer dam from shore to shore north of the old site that was chosen, there would be nothing in the centre of the coffer dam except you buttress the coffer dam itself? A. Yes, sir.

Q. The point I wanted to get at is, whether the great length of a coffer dam unabuttressed and nothing behind it would not make the strain very great right in the centre through weight of water? A. Yes, sir, and a long dam of that length you could break just a little bit and it would open up so much more.

Q. And that would be subject to be swept up more quickly? A. Yes, sir.

Q. So that it actually made coffer damming very much cheaper to do in the position it was placed in than it would have been to coffer dam on the original site? A. Yes, sir.

By Mr. Ducharme:

Q. That would apply to unwatering: there would be less water to pump out? A. Yes, and the decreased area you would have to pump out would make it cheaper.

Q. There is quite a piece of work done on the island by earth filling; can you estimate the cost of the value of such work? A. I could estimate what it cost to put the fill there, but its value when there is pretty hard to say.

Q. How long was this fill on the island? A. Seven hundred and twenty-five feet.

Q. Do you know how much it did cost? A. I do not know.

Q. Could you estimate it? A. Yes.

Q. How much do you think it would cost, giving an estimate now right away? A. Roughly speaking, it would cost from $3,600 to $4,000.

Q. Was there an apron put to the dam ? A. Yes, sir.

Q. Would there have been one in the first dam just as well? A. It was the same style of dam.

Q. There was no extra apron put there more than whatever apron you would put to any dam? A. Not in that class of material in the geological formation of the bottom in that locality?

Q. You say that in the spring of 1911 the freshets took away part of the coffer dam on the Quebec side; how much of it went away? A. About one-half.

Q. How many feet? A. About 240 feet went away.

Q. That was from the island shore? A. From the Quebec shore to the centre.

Q. Was that a great loss? A. Yes, sir, it had to be built in again.

Q. What did it cost to put it there? A. It cost approximately $30,000 to replace it.

Q. As you did replace it? A. Yes.

Q. Do you know what the whole coffer dam work had cost at first? A. The whole work cost $61,400, that is what Kirby & Stewart put in the account.

Q. They called it unwatering Quebec channel? A. Yes. It cost some $48,000, and they have added 15 per cent to that, but part of that money was expended in unwatering, not only there, but it was all part of the same thing.

Q. It was all necessitated by the flood? A. Yes, sir.

By the Chairman:

Q. When that part of the coffer dam was swept out was the remainder of the coffer dam made useless? A. No, sir. Has the whole of that piece that remained been incorporated in the new coffer dam? A. Yes, sir, it is in use at the present time.

Q. So that you did not need on that portion which remained, to do any extra work? A. No, sir.

Q. The whole extra cost on the Government has been in replacing the part that went out? A. Yes, and of course there were smaller dams below that were injured also.

Q. Smaller dams that had been built by Kirby & Stewart? A. Yes, sir, and they all came under the same head.

By the Chairman:

Q. What were the smaller dams made for? A. The dam site there is in a pocket and a creek comes down just below the work, and the water backs in.

Q. These were necessary to make the place dry? A. Oh, yes.

Q. And were made in connection of the unwatering? A. Yes, sir.

Q. Now, this one went away from the Quebec shores, can you explain why? A. I believe the bottom along the Quebec bank had more soft material in it than the bottom out in the middle of the spring. In the middle of the stream there were just bare boulders, and the bank would be boulders filled around with sandy material, so that the bottom at the Quebec bank would be softer than in the middle of the stream, and it would have more tendency to scour out in the bottom of the stream.

Q. Could not the contractor have provided against that with proper care and attention? A. The top of the dam might have been decked and the water led past the back of the cribs so that any scouring action would not occur right under the cribs themselves.

Q. They might have discovered that afterwards, but I mean when it was actually done, did the contractor take proper care and attention to see that this work was properly done? A. They could not have done much. I do not believe they could have done very much, because they could not have improved the bottom; but if they had prepared the top, the scouring action might have been taken farther down below the cribs.

Q. When they began to work at the coffer dam, could they not find out when doing it that the bottom was soft? A. Yes.

By the Chairman:

Q. In other words, if a thoroughly skilful builder of coffer dams had been directing the work for the contractors, would he naturally have taken precautions such as you have described from observing the character of the dam on the Quebec shore, and which precautions were not taken in fact in this case? A. A scouring action like this is liable to happen at any coffer dam where the water goes over the top.

Q. That being so, I will come back to my question—an experienced and careful builder knowing it is likely to happen, would he in the regular course take some precaution such as you have described? A. Yes, and these precautions were thought of at the time, but it was not deemed advisable to spend any more money on the coffer dam because when the water went to the top of the coffer dam they would have to be blown out very shortly if the water was still rising.

Q. What would have to be blown out? A. The coffer dams.

Q. Who thought of these precautions and suggested them at the time? A. I believe I remember some of the contractors' men, either the Superintendent or Mr. Roger, discussing the matter, and also Mr. Coutlee and myself.

Q. Discussing it with you? A. Yes, sir.

Q. Who would have the right to say whether it should be done or not, when the discussion took place. Would that be a matter for the engineers to say, don't do it, or do it, or would that be in the discretion of the contractors themselves. Who would have the right to say, I will do that, or I won't do that? A. I believe the engineers would have the say, but things were not altogether clear on the work there, on account of the Department paying for the work and the contractors executing the work.

Q. That brings me right to this point—the contractors were to receive unit prices for doing the concrete work? A. Yes, sir.

Q. And they had a fixed sum in the contract for doing the coffer dam work? A. Yes, sir, in the original tender.

Q. In the contract? A. Yes, sir.

Q. And apparently, if the coffer dam went out, so far as the contract is concerned, they would themselves have to replace the coffer dam? A. Yes, sir.

Q. No matter how many times it went out, it would be their duty to replace it according to the terms of the contract, because it was a necessity to the concrete work they had to do later on, so that whether the coffer dam was sufficient or not, would seem to be entirely a matter for the contractors themselves, would it not? A. Yes, sir.

Q. For the simple reason that if an insufficient coffer dam was put there, they would be the loosers? A. Yes, sir.

Q. How deep the coffer dam should go, how long it would be, what precaution should be taken, was a matter entirely for the contractors? A. Yes, sir.

Q. To put it broadly, it was no person's business how they built it, provided they got the concrete work done later on? A. Yes, sir.

Q. What the Department would be interested in, would be that they made due haste in building it, so that the work on the dam would not be delayed? A. Yes, sir.

Q. From that position it seems as though the question as to whether the coffer dam was sufficient for a bottom of the kind that was there, would be a matter for the investigation and decision of the contractors alone? A. Yes, sir.

Q. And not the government engineer's business at all? A. No, sir, of course they would act on the engineer's suggestions.

Q. However, the engineers were really interested for the government as to the time that was going to be used? A. Yes, sir.

Q. If the engineer suggested not to do such a thing and by not doing it, the dam was swept away, the contractors would have no legal claim on the government for the cost of another dam? A. I do not think so.

Q. You do not see how it could be? A. No.

Q. In other words, the ultimate responsibility for what was done on the coffer dam was with the contractors and their superintendent? A. Yes, sir.

Q. Speaking as an engineer who was there and observing the work, and not in the light of what happened later on, but in the light of the information you had when the actual coffer-damming was going on, were the surrounding circumstances such that in your opinion a cautious and skilful builder of a coffer dam would have taken precautions which were not taken? A. Yes, sir, he would have made the dam heavier.

Q. You believe that reasons for making the dam heavier were visible at that time? A. Yes, sir.

Q. That was your opinion then? A. Yes, sir, talking over the scheme of decking the top of the dam to prevent scouring, it was also reasoned that after the water attained a certain level in the lake, if it went higher, damages would have to be paid to different towns along the lake due to flooding, and it was expected when the spring freshet came on the water was rising so rapidly, that the water would overtop the dam and the lake level would be at the extreme height, and it was thought to be cheaper to blow out the coffer dam and not spend any more money on it than to pay damages at these different points.

Q. You say it was thought that such a contingency might occur? A. Yes, sir.

Q. Who discussed that? A. Both the contractors and the engineers.

Q. You mean to say that if the water had risen to that height, and that flood had taken place, it might have happened that you would have had to blow it out? A. Yes, sir, and there were complaints at the time coming from people at the upper end of the lake that they were being damaged.

Q. But as a matter of fact, you did not blow it out? A. No, sir.

Q. It went away of its own accord, and you had nothing to do about that, and you don't know what you would have done.

By Mr. Ducharme:

Q. How long would it take to blow out 100 or 200 feet of coffer damming supposing the emergency should arise? A. Preparations were being made when the dam was being built, for placing dynamite in the cribs, and it might take two days to prepare and a couple of seconds to blow it out.

Q. You say preparations were made, but that it would take two days to blow it out? A. That was one scheme, but under another scheme it would only take twenty minutes to prepare and a couple of seconds to blow it out.

Q. In the spring of 1911, when this occurred, the Ontario channel was free? A. Yes.

Q. There was no coffer da min the way, there was nothing but the dam itself? A. Yes.

Q. And all the sluices were open in the Ontario dam? A. Yes, sir.

Q. Was not the Ontario passageway proving itself sufficient to take out the extra water? A. No, sir.

Q. Had the Ontario side been cleared out to the full extent it was planned? A. No, sir.

Q. The excavation which was intended had not been done? A. No, sir.

Q. You explained a little while ago that the two sides of the Ontario channel would be part of a scheme to widen them out as to make the stream much broader? A. Yes.

Q. Has that been done as yet? A. No, sir.

Q. This excavation that wants to be done and which had not been done, was not a part of the contract work? A. No, sir.

Q. That was part of the work the government undertook to do themselves? A. Yes, with the dredge.

Q. Was that going on to some extent in the summer of 1909 and 1910? A. Yes, sir.

Q. By the dredge *Queens*? A. Yes, sir.

Q. Had that work been pushed as rapidly as it might have been pushed? A. Yes, but the dredge was not suited for that kind of work.

Q. I don't mean if it was pushed by the dredge, what I mean is, in view of the great difficulty which did arise and the loss of the dam on the Quebec side, would that have been averted if all the dredging and widening contemplated on the Ontario side had been done? A. Yes, sir.

Q In other words, when you get the excavation on the Ontario side completed, and when you get the widening which you design completed, the coffer dam on the Quebec side would be under nothing like the same strain? A. I do not believe the water in the lake would rise so high.

Q. And the capacity of the Ontario stream to carry away the water would be more than doubled? A. Yes, sir.

Q. In the summers of 1909 and 1910, the conditions were such that with proper progress of the work, the Ontario channel could have been made to carry off a very great deal more water than it was capable of carrying off in fact? A. If the machinery could be erected in that time.

Q. You have had in view that the Quebec stream had to be coffer dammed and unwatered and a dam put up there—looking back now in the light of your experience, could not the Government part of the work have been done before this catastrophe in 1911 so thoroughly and completely, that the catastrophe might not have happened at all? A. That is provided a new dredge could be built on the lake in that time.

Q. Provided the machinery for doing the work had been on the lake, the widening and deepening would have averted trouble on the Quebec side? A. Yes, sir.

Q. You say that in order to have that machinery it would be necessary to have a dredge built there and transported in some way? A. Yes, sir.

Q. Was any attempt made at all to get such a dredge? A. I believe there was some talk of it but nothing done.

Q. There is no dredge there? A. No, sir.

Q. And you don't know how long it would have taken to arrange and get such a dredge ready? A. No, sir.

Q. You could have blown out a sufficient part of the coffer dam in twenty minutes if the necessity arose? A. Yes, sir.

By Mr. Lake:

Q. You said in your testimony that when the freshet took away part of the dam, they were just changing the work from coffer-damming to permanent work? A. Yes, sir.

Q. What do you mean by that? A. Up to that time, the men had all been engaged in building coffer dams and making them tight, and then when the bed was made dry, excavation was immediately started to prepare the dam for the permanent work, and so in that way the contractors took most of their men from the unwatering proposition and started them on the work which was to be permanent. The unwatering is a temporary work.

Q. I was asking you how the coffer dam was made. Is there any crib work placed on the shore at each end? A. Yes, there is cribwork built up the shore to continue the dam right up to the level that we expect to hold the water. We started to build the coffer dam when the water was fairly low and then we got the dam in. The water raised a little and it put these cribs on the shore under water, that is, there is a pressure on those cribs.

Q. Yes, so that is where you start, by the cribwork at the end? A. Yes.

Q. And at the same time it is to prevent the water from getting on the land, you know what I mean. The water would raise and go around? A. Yes.

Q. So you say this is made in such a way that it will resist the pressure of the water? A. Yes.

Q. This part of the dam that went away from the shore—wasn't it on account of that cribwork not having been properly laid? A. No, it was on account of the water scouring out the bottom under the crib. That is what we believe, of course we do not know.

Q. Now, when you arrived there on November 19, 1909—

The WITNESS.—October.

Q. October, 1909, did you see much timber there? A. No, there was a good deal of standing timber on the island.

Q. What do you call standing timber, trees? A. Yes.

Q. I do not mean that, I mean wood that has been carted there for the contractors? A. No, sir, there was none.

Q. Was there any cribwork? A. No, there was no cribwork required at that time.

Q. There was none? A. There was no timber there.

Q. No timber of any kind? A. No.

By Mr. Lake:

Q. Was there a coffer dam built in the fall of 1909? A. There was no coffer dam required; at that time that channel was dry.

By the Chairman:

Q. In answer to Mr. Ducharme you say at the time you arrived in the fall of 1909, there was no timber for the contractors? A. No, sir.

Q. And they had not previously used any timber in the work? A. No, sir.

By Mr. Ducharme:

Q. Here is what Messrs. Kirby & Stewart say in their letter—

The CHAIRMAN.—The letter of December 29, 1910, is the letter he is referring to.

Mr. DUCHARME.—He says that he needs to make preparation to obtain the necessary plant and outfit and supply all the timber required for the construction of the dam on the 14th November.

The CHAIRMAN.—1908.

Mr. DUCHARME.—And he says on the 12th day of December: "We had gone on preparing that timber and plant to the extent of over $20,000."

The CHAIRMAN.—20th December, 1908.

By Mr. Ducharme:

Q. From what you know was there any such thing there as plant or timber to the amount of $20,000 on the place? A. I would not say.

Q. Was there anything? A. There was timber that they had used in May—

The CHAIRMAN. You are asked if there was any on the place and you have answered there was not when you went there in the fall of 1909.

By Mr. Ducharme:

Q. In the month of October, 1909, there was no such thing? A. No, sir.

Q. There was no plant or timber? A. There was plant for other work.

Q. What kind of plant had they? A. They had a cable way set up and two large derricks with hoists.

Q. Steam derricks? A. Yes, steam derricks, and several small boilers and one large boiler.

By the Chairman:

Q. What kind of plant was afterwards brought in and used by them in the work? You say it was not there when you went on in October, 1909. A. We brought in a steam shovel, that was the principal item.

Q. For excavating? A. Yes, sir, and concrete mixers.

By Mr. Ducharme:

Q. There were no concrete mixers when you got there? A. There might have been an old one, but it was not set up.

Q. And there were not sufficient mixers there? A. No, but of course there was considerable excavation to be done before they could use these mixers.

Q. But that steam shovel would be necessary for that excavation? A. Yes, the steam shovel might have been there the first thing.

Q. I mean on the Ontario channel, the work of excavation could have been almost continuous during the summer of 1909, could it not? A. Yes, well—

Q. In some part or other of the channel? A. Late in the summer. Of course 1909 was an extremely dry year in the history of the water.

Q. When did that steam shovel come in? A. The latter part of November or the 1st of December, thereabouts.

Q. There would have been time for three months excavation before that, would there not, November, October and September. They might have been excavating all those months? A. October at least, October, November and December.

Q. You said in your testimony that blasting about 1,500 feet above the coffer dam would have to be made? A. That was quarry work.

Q. But the distances seems to be very long.

The CHAIRMAN.—He meant that they would have to go that distance to get the centre they would require to put in the coffer dam.

WITNESS.—We are talking about the present work there.

By Mr. Ducharme:

Q. Can you give the full name of Mr. Rogers?

The CHAIRMAN.—Mr. Coutlee will give us that when he comes in.

WITNESS. No, he is a contractor I think.

By Mr. Ducharme:

Q. The cribwork done at the coffer dam in the Ontario channel was all made in round timber? A. Yes, sir.

Q. There was no sawed wood near the cross-section? A. It was all round timber.

Q. As it comes from the wood? A. Yes, sawn in proper lengths.

Q. And was the work on the Quebec side of the coffer dam done the same way? A. Yes, that was round timber too.

Q. There was no sawed wood until you got your own sawmill? A. No, sir.

Q. Were you ever approached while you were there working as to reports or as to whether the work could be done or in anything in relation to the contract? Were you approached in any way by the contractors or by any employees of the Government? A. Suggestions you mean?

Q. Or suggestions, yes? A. Well, of course when I was in charge I talked the work over a good many times with the contractors' superintendent there.

Q. I mean, were you never approached in a way to induce you not to do your duty? A. Oh no, sir.

Q. You were never approached in that line? A. No, sir.

Q. Nobody spoke to you about that? A. No, sir.

Q. And nobody spoke to you about the testimony you were to give here? A. No, sir.

Q. Whenever Mr. Coutlee would write the Deputy Minister or the Assistant Deputy Minister, would he consult you? A. No, he did at times if I was in Ottawa, and he happened to be writing.

Q. Writing to Ottawa? A. Yes, sir.

Q. Were there any soundings made there while you were there? A. What do you mean, sir.

Q. Soundings of the foundation or bottom of the river? A. No, all the test pits and bore holes were made before I got there.

Q. The price asked for the coffer damming and unwatering was to be $4,000? A. Yes, sir.

Q. That is for the whole work? A. Yes, sir.

Q. Would you consider that a ridiculous price? A. Pardon?

Q. Would you consider that a ridiculous price? A. Yes, sir.

Q. You would? A. Yes, sir.

By the Chairman:

Q. It could never have be done for that amount? A. No, sir, not in my opinion.

Q. Is there any doubt at all about it? It was to have a coffer dam all the way for the wooden dam that that sum was put down in the first place. Is $4,000 a reasonable amount to suggest for such work? A. Not at all.

Q. One of the tenders went as high as $54,984, wasn't it? A. The highest, Lumsden, put in $54,994 for the coffer dam that was needed in front of the wooden dam. From your knowledge of the lake and surrounding country, do you think that amount would have been a fair estimate for coffer damming? A. No, I think it would cost more than that.

Q. More than $54,000? A. Yes, sir.

Q. Well, from that answer it follows that the $4,000 was in the words of Mr. Ducharme a ridiculous amount? A. Yes, sir.

By Mr. Ducharme:

Q. You are a civil engineer, are you not? A. Yes, sir.

Q. As a civil engineer, if you had seen that price wouldn't it have struck you as ridiculous? A. Yes, sir, it always did.

By Mr. Lake:

Q. Is there anything else you would like to say to the Commissioners by way of giving us a clearer understanding of any part of the evidence you have given or in regard to the work generally?

The CHAIRMAN.—Any statement you would like to make about the matter.

The WITNESS. The only thing is, I consider the contractors were very unfortunate in securing very poor men to look after their work there, and the only good man that they got died on the work.

By the Chairman:

Q. He was— A. McNair.

By Mr. Lake:

Q. Is there anything else you would like to say, any other point you would like to mention? A. I would think that when the contractors were in difficulty with the Quebec channel coffer dams—

By the Chairman:

Q. In May, 1911, do you mean when it went out? A. Yes, or even before that, in October, 1910, when the water came up in the lake it was very high water for the fall of the year. The contractors had to discontinue work on the Quebec coffer dam and I believe that they were ready to throw up the job at that time if they had not been able to make some arrangement to get additional money for unwatering that channel, and if the work had been taken away from them and re-advertised for tenders, it would have cost a good deal more.

Q. It would have cost a great deal more—what would have cost a great deal more? A. The coffer dam and the remainder of the work.

Q. Would have cost a great deal less, you mean? A. No, a great deal more. And a new firm coming in there would have put a bigger price on that work than a cost of fifteen per cent.

Q. You mean to say, for that part which they had built and which remained? A. Also the part that went out.

Q. A sufficient comment on that is that if a new firm had come in and built that coffer dam, it would have been built in such a way that it would not have gone out, and you would not have had to build a great deal over again. You are speculating, because you told me just some time ago that if thoroughly competent builders of coffer dams had been at work they might have taken precautions that were not taken in this particular case? A. Yes, but I also said that the contractors had some reason for not spending more money on the dam at that time.

Q. But if more money had been spent on the dam, it would have been a better dam? A. Yes, but we have no assurance that it would not have gone out.

Q. What you intended to say was this, I suppose, that if new men had come in at the end of 1910 and undertaken to build the same kind of coffer dam across there, they would naturally have charged more for it than these men would charge for it having their plant on the ground? A. Yes.

Q. Of course that is obvious. You cannot tell what other results might have followed from new men coming in to begin work. Let me ask you this one thing, after coming on the work you made yourself familiar with all the testings that had taken place before that time by the Department to show the character of the location and so forth, didn't you? A. Yes, sir.

Q. Do you know that test pits had been sunk and soundings had been made, and so on? A. Yes, sir. For a time after I was on the work I had charge of the dredge work, and I was not active in the main office, although I am quite familiar with all the plant.

Q. You mean to say now you know what had taken place prior to your coming there? A. Yes, sir.

Q. Do you think sufficient precaution such as a high class hydraulic engineer, would take, was taken to ascertain in advance the nature of the Quebec side? A. There were some points in the work where it seemed they did not realize just what they were up against there.

Q. Who didn't? A. The contractors.

Q. But I was really asking whether you thought that the engineers' staff had taken sufficient precaution to ascertain the nature of the bottom on the Quebec side, and so advised the contractors? A. Yes, sir. The test pits that were shown on all the plans showed the nature of the soil on that side, but the contractors did not make any borings.

Q. Well, did they, as a matter of fact, have access to the borings made by the Department? A. Yes, sir.

Q. Well, then, did the result later on show that those borings had been correct in revealing the character of the bottom? A. Yes, sir.

Q. Then with those borings revealing the character of the bottom, was the coffer dam work done as it should have been done with that knowledge, so as to secure the bottom of the coffer dam from the scouring which took place? A. No, the coffer dam was not made heavy enough.

Q. Was not made heavy enough in the light of the information which they had before them at that time? A. Yes, sir.

By Mr. Ducharme:

Q. Do you recollect the state of the work about the 7th November, 1910? A. The Ontario channel.

Q. Yes. Do you remember the state of the work at that date? A. No, I do not remember just at that date.

Q. Or about November, 1910. Don't you remember what was the state in a general way? A. Things were pretty much at a standstill.

Q. Here is the reason I put the question. There was a letter sent to Messrs. Kirby & Stewart on the 7th November, 1910, telling them that their time for the finishing of the contract was extended to 31st December, 1910, giving them about seven or eight weeks. Now, was there any possibility of finishing the contract at the specified time, 31st December, 1910? A. No, sir.

Q. The Engineer writing this would know it was an impossibility? A. Yes, sir.

Q. Now, when you arrived there in October, 1909, at the present location of the dam, was there any water? A. On the Ontario side?

Q. Or was it dry in the Ontario channel? A. It was practically dry. There was a little water coming through the boulder seepage water it is called.

Q. From your knowledge now of the place do you think it might have been that way for quite a few months? A. Yes, it would have been that way until the following April.

The CHAIRMAN.—He told us before that the work could have been commenced there in August.

By Mr. Ducharme:

Q. It could remain that way until April? A. Yes, sir.

Q. Do you think the previous year it would have been about the same? A. No, I could not say.

Q. Well, when you had high water, how much water would there be at this place? A. About nine feet.

Q. That is at high water? A. At high mark.

Q. That is when the water became very high? A. Yes, sir.

The CHAIRMAN.—That is all we have to ask you in the meantime. I and my fellow commissioners have been very much pleased indeed with the character of the evidence you have given, and we will be pleased to say so in the proper quarter. You will get that other information that we asked for.

Witness retired.

TUESDAY, January 23, 1912.

CHARLES R. COUTLEE, called, sworn and examined.

By the Chairman:

Q. Where is your residence, Mr. Coutlee? A. In Ottawa, sir.

Q. Spent some years here? A. Some years, since 1905 or 1904, I think—1905.

Q. You are a civil engineer, by profession? A. Yes, sir.

Q. When did you first enter the employment of the Government? A. In 1889 first, I was employed with them from 1889 to 1900, and then I came back again in October, 1904, to the present time.

Q. Now, immediately prior to your connection with the Lake Timiskaming dam, you were connected with the Georgian Bay canal project, were you not? A. Yes, sir, I was one who was in charge of it.

Q. The Georgian Bay Canal project would use the Ottawa stream up as far as Mattawa? A. Yes, sir.

Q. From which the canal would go off towards North Bay? A. Yes, sir.

Q. In the flood season, in the spring of the year, the waters above Mattawa would gorge the Ottawa below Mattawa? A. Yes, sir.

Q. And make currents too rapid, I suppose? A. Yes, sir.

Q. For the convenience of navigation, by damming at the Long Sault and Timiskaming, those waters could be held back and allowed to come gradually at a later portion of the year. When the lower Ottawa would be partly run off, the water in the Ottawa would be run away to some extent? A. Yes, sir.

Q. And thus the gorging of the Ottawa below Mattawa would be avoided to some extent? A. Yes, sir.

Q. The scheme for putting a dam at Timiskaming originally arose in connection wtih storing water in the dry season for the use of the mills on the Ottawa? A. I believe so, yes, sir.

Q. And for that purpose the lower dam, or what was designed to be the lower dam, was eventually built? A. Yes, sir.

Q. After it was decided to change from wood to concrete as material for the dam, it was also decided to make the dam higher and hold back more water? A. I took charge of this after that decision had been made, and we then designed a dam between March, 1909, and July of that year. The design was worked up by Mr. Matheson and myself.

Q. That is exactly what I want. You took charge of the dam work on March 19, 1909, I find? A. Yes, March, 1909.

Q. Well, prior to that, there had been some surveys of the Ottawa a couple of years before that, and in the fall of 1908 there had been some tenders for a wooden dam that was intended to be put at the head of the Long Sault Rapids, and they were all in connection with the storage of water for the mill and other purposes? A. For water-power purposes, yes, sir.

Q. Now, when you came in from your previous connection with the Georgian Bay project, it immediately occurred to you, I presume, that by building the dam higher and making it a more permanent structure, value could be given to the Georgian Bay project? A. It was hardly that, sir. The Georgian Bay project was very far away, but it was more economical to make these dams larger, that is, to make the storage depth greater in the three lakes. The three lakes are included in that storage scheme, the original scheme.

Q. You use the word "economical" in the sense of strong water and power? A. Yes.

Q. You don't mean more economical to build the dam? A. In a dam it would be.

Q. I was speaking more of the increasing the height of that. You would not say it would be more economical to build the dam of concrete, but to increase the height you had economical considerations in view, the conservation of water? A. Yes, sir.

Q. And that conservation of water, giving a greater flow later on in the year than the low dam would have given, would at the same time serve a valuable purpose in the Georgian Bay project? A. Yes.

By Mr. Lake:

Q. Was it also considered to be of value to the people who were living on and using the three lakes you speak of? A. The population is very sparse there. The great value of it is in conserving for power purposes.

By the Chairman:

Q. Below? A. Below, yes.

Q. Now, you were made engineer in charge in March, 1909? A. Yes, sir.

Q. And you had as assistant Mr. Matheson? A. Yes, sir.

Q. Who afterwards went out to British Columbia to work? A. Yes, sir.

Q. Was he engineer on the work? A. Yes, sir, he was resident engineer at Timiskaming.

Q. After actual work began, I suppose? A. Yes.

Q. He was succeeded by Mr. Donnelly? A. Yes, sir.

Q. Was Mr. Donnelly's work practically the same as Mr. Matheson was doing? A. Of course Mr. Matheson has had greater experience than Mr. Donnelly. We worked together more, but so far as the work at the actual place is concerned, Mr. Donnelly was doing the same.

Q. You say in March, 1909, when you went to work, that none of the plans which were afterwards worked upon had commenced? A. No, sir.

Q. What would be the first thing you had to do in making plans? A. Well, Mr. Matheson and myself considered the whole scheme of storage, including the other lakes, and we then went into a study of the hydraulics of the river as far as possible at that time.

Q. Meaning by the word "hydraulics" what? A. The conditions of flow and the regimen of the river.

Q. The depth and the height to which water might go in different seasons? A. And the quantity that would be possible.

Q. Yes, you considered that. Well, after these considerations, what was the first practical step you took? A. The first practical step we took was to make some test pits for the foundations.

Q. When were they made? A. They were begun in March, I think, sir, and carried on till April. I think the work was closed up in April.

Q. Nothing that had been previously done would be of any value in those tests? A. Except the survey work.

Q. But I was speaking more particularly of the test pits? A. No, I do not think there were any test pits made.

Q. As a matter of fact, the site which you eventually chose, and where, I presume, you made those tests, was a different one intended for the wooden dam? A. Yes.

Q. By the way, did you change the location after making your test pits, or did you first decide where you would locate the dam and then make test pits? A. We made test pits first, examined the bottom.

Q. And did you at that time examine the bottom where the Quebec dam was ultimately started? A. We had a test pit on each side of the Quebec channel. It was impossible to make a test pit in mid-channel on the Quebec side.

Q. Impossible because of the season of the year? A. No, it was a running rapid.

Q. So that even at low water you could not make it there? A. No, sir, it was low water then, as a matter of fact.

Q. Then you had to reason from what tests you made what you might expect to find where you made no tests? A. Yes.

Q. But you did nothing at all to ascertain the nature of the bottom of the centre of that Quebec channel? A. No, sir, not in the centre of the Quebec channel.

Q. That was not possible? A. It was not practicable.

Q. Just anticipating a little bit, the coffer dam which was built on that side broke away in the spring of May, 1911? A. Yes, sir.

Q. At the place where that coffer dam broke away, on the shore side, had you made any test pits at any time? A. I think the test pit was fairly close to the end.

Q. Near the side of the dam? A. Yes, about 100 feet below.

Q. Did your test pits at that place reveal a bottom which your later experience of the coffer dam shows you to have been there? A. No, sir, the bottom is a boulder mess filled in with light soil, and when a boulder is disturbed the light soil is easily moved by the current.

Q. Well, was that true of the place where you began the test pit as well as where the coffer dam was to be; on that side was there any difference in the bottom? A. No, sir, I think that would be true of where the test pit was put down, though perhaps we did not realize it at that time that the soil was of that nature.

Q. Well, now, after finishing your test pits the next best thing was to get back and have the plans prepared, I suppose? A. Yes, sir.

Q. And you came to a couclusion on that? A. Yes, we were at Ottawa and

Q. And you came to a conclusion on that? A. Yes, we were at Ottawa and went up to Timiskaming to make the different investigations.

Q. Testings? A. Yes, sir.

Q. And then you came back? A. Yes, sir.

By Mr. Lake:

Q. You came back from where? A. I think we decided on the site of the ground.

Q. I suppose we may assume that you decided on the site on the Ontario side because it was driest at that place in the low season, or will you tell us exactly why you chose that site on the Ontario side? A. Those test pits are shown here (referring to map).

The CHAIRMAN.—The test pits are shown on the linen plan showing the general site.

By the Chairman:

Q. Bore hold No. 1? A. Was in the middle of the Ontario channel.

Q. About how many feet? A. About 150 feet above the present dam. It was some 42 feet looking to the rock.

Q. The plan for the wooden dam was to have it built at the north end of the island? A. Yes, sir.

Q. What led you to put the Ontario end of your concrete dam lower down the stream? A. We found it necessary to increase the cross-section of discharge.

Q. At the site chosen for the wooden dam, then you had not put in a dam, or there would be some water? A. Yes, sir.

Q. And consequently in order to build a dam there it would be necessary to coffer dam, wouldn't it? A. I do not think so. I think it could have been built without coffer damming I think without at least expensive coffer damming.

Q. The cribs might have been floated out and dropped into place without coffer damming. If it had been necessary for any part of that old site to be coffer dammed what portion would be coffer dammed, that is, if it had been necessary to coffer dam any of the work at the old site? If any coffer dam had been needed it would have been on the Quebec side? A. Yes, sir.

Q. Now suppose you had started to build a concrete dam at the site intended for the wooden dam, is it still true that coffer damming would not have been necessary? A. Oh, no, it would not have been necessary for a concrete dam at the old site.

Q. As that old site showed a dam running across both streams in a straight line, if built of concrete, coffer damming would have been necessary almost the whole way? A. It could have been made in two sections.

Q. The middle section on the island? A. Would have been high and dry you see.

Q. At low water? A. Yes.

Q. The middle section of the old site was dry at low water? A. Yes, sir.

Q. And no coffer damming you think would have been necessary there? A. No, sir.

Q. Will you tell me, looking at this paper plan which shows the old, the originally proposed wooden dam, if the dam had been made of concrete how many feet of coffer damming would have been necessary? A. About 800 feet, sir.

Q. How much coffer damming was necessary at the site on which the dam on the Ontario side was built, and the dam on the Quebec side would have to be built. Take the Ontario side, how much coffer damming was necessary on the Ontario side? A. On the Ontario side we must have had about 100 feet.

Q. And how much coffer damming was done on the Quebec side? A. About 400 feet.

Q. So we have this, if the dam had been constructed on the old site, there would have been 800 feet of coffer damming, and on the new site 500 feet? A. Yes, sir.

Q. There being deeper water at the site of the wooden dam, the site chosen for the wooden dam, than at the site where the concrete dam was actually put on the Ontario side, the coffer damming for the concrete dam at the old site, as I will call it, would have been higher than was actually necessary at the new site? A. Yes, sir.

Q. And on the Quebec side would that be actually true? A. It would be a little more, about the same.

Q. About the same, because you did not go very far down stream for a site for your concrete dam on the Quebec side? A. No. sir.

Q. You kept nearer the original site? A. Precisely.

Q. Then as to the difficulties of coffer damming at one site or the other—for a concrete dam I mean—would they vary much? A. Not very much, sir.

Q. For instance, on the Quebec side, the site not being changed very much, the current would have been about as rapid at the old site as at the new site? A. Pretty nearly.

Q. And the depth about the same. A. Yes, sir.

Q. While on the Ontario side the current certainly would not be greater because it was dry at time the concrete damming was done? A. Yes, sir.

Q. While on the other hand, at the old site, the coffer damming would have been done in water all the time? A. Yes, sir.

Q. Now, what I am getting at is this, you will recall that in the original tenders, the amount put in for coffer damming by Kirby & Stewart was $4,000, and in the case of the highest tender, Mr. Lumsden, it was $54,994? A. I do not remember the figures.

Q. Well, that was the amount. Now for coffer damming for a wooden dam, if your view is right as to the way in which the wooden dam might have been built, the amount it would cost would have been uncertain? A. That is for the wooden dam?

Q. Yes? A. Yes.

Q. Depending on the view which parties might take as to the best way to build a wooden dam? A. Yes, sir.

Q. Some persons might have begun by building a wooden dam, coffer damming right across? A. Yes, sir, some might have taken that view.

Q. Especially taking such a high sum as Mr. Lumsden has quoted, that must have been in contemplation. As a matter of fact, when I am speaking about coffer damming, the word used is 'unwatering' in the tenders? A. It is easy to build a coffer dam, but it is a tremendous job to get it under water.

Q. In the tender where the word "unwatering" is used it includes coffer damming? A. Yes.

Q. Then the sum of $4,000 for unwatering quoted by Kirby & Stewart for the wooden dam might have been sufficient under certain contingencies? A. Yes, sir, it might have been.

Q. Would you regard it in many cases as a very low estimate? A. Yes, sir, I would regard it as very low.

Q. Probably indiscreetly low, having regard to contingencies even for a wooden dam? A. Yes, sir, in view of what we know to-day it is certainly very low.

By Mr. Lake:

Q. Did you know when you first went out with the view of looking for the place what the tenders for unwatering were? A. I don't think I did, sir.

By the Chairman:

Q. But later on, when Kirby & Stewart were told that the dam was to be built of concrete, they were not told at that time that a change of location would be made. that was in the winter of 1909? A. I do not think so.

Q. I am telling you the fact that is shown by the facts. During the winter of 1909, Kirby & Stewart were told that the Government had decided to change to concrete, and the engineer was asked to give the Department a statement of the quantities of concrete which would be required if they changed that wooden dam into a concrete dam. He supplied the quantities, and Kirby & Stewart were notified that they would be given a contract for a concrete dam. They were told at the same time that the sum of $4,000 for unwatering would not be changed but would be kept in. Now this is the question I want to put, would $4,000 be at all adequate for the coffer damming of a concrete dam at the site of the wooden dam? A. No, sir.

Q. It would not be within reasonable limits, would it? A. No, sir.

Q. Not at all adequate in any way whatever for such work? A. No, sir.

Q. Now then, we find the contractors went upon the work with some material about May, 1909? A. Yes, sir.

Q. You are aware of that personally? A. Yes, sir.

Q. After testing for your plan, and so forth, when did you return to the site? A. Oh, I was there several times.

Q. In the spring of 1909? A. Yes, sir. In connection with that there is a matter, some material was ordered, I believe before we went there.

Q. By the contractors, you mean? A. Yes, sir.

Q. When was any work actually commenced there? A. In May, 1909.

Q. The contract itself was not signed until 22nd July, 1909? A. No, sir, not until 22nd July.

Q. I find it was only ten days before that that the Chief Engineer reported that the plans and specifications were ready? A. I think so, yes, just about that time.

Q. Now, in the preparation of these plans and specifications, did you take part? Were they made by you? A. Yes, sir, I made what I may call the additional specification.

Q. Why do you call that an additional specification? A. Because there was nothing mentioned in the original specification.

Q. For the concrete dam? A. For the concrete. There was no detail of concrete work.

Q. What do you mean by the original specification? A. That is for the wooden dam.

Q. Well, wouldn't you make complete specifications for the concrete dam without regard at all to the old wooden dam specifications? A. Oh, yes, I did.

Q. Then when you speak of an additional specification, you simply mean the only specification you made for the concrete dam? A. Yes, I attached it to the old one.

Q. Before you could make specifications, the plans had to be completed, I suppose? A. Yes, sir, in fact they were done together.

Q. A specification had been prepared prior to the tenders which were made for a wooden dam? A. Yes, sir.

Q. When the preparations were being made to give the contract for the concrete dam, it became necessary to add to these specifications? A. Yes, sir.

Q. And that addition you call an amended specification? A. Yes, sir.

Q. And that was prepared by you? A. Yes, sir, with Mr. Matheson.

Q. To the contract which was actually signed in July, 1909 there was attached the old specification intended for the wooden dam, and the amended specification which you made for the concrete dam? A. Yes, sir.

Q. And the prices quoted in the tender of Kirby & Stewart for the wooden dam are made part of the specification? A. Yes, sir, I think there is a clause in there.

Q. Now, in that list of prices, item 24, is "concrete 1, 3 and 5 in foundation, $8.50 per cubic yard." What concrete was necessary for the wooden dam originally designed? A. I don't think there was any.

Q. I find no mention of concrete in the original specification? A. No, sir.

Q. Can you conceive what was meant by that phrase, 'Concrete 1, 3 and 5 in foundation'? A. That meant the proportions, one cement, 3 sand, 5 broken stone.

Q. It means the mixture of concrete? A. Yes, sir.

Q. Where might a quantity of concrete have been necessary in that wooden dam? Where can you suggest it might have been used? A. It might have been used in capping the cribs.

Q. That means used in the top? A. Above low water wood exposed to the air and water rots very quickly, so sometimes that is replaced by concrete from low water mark up.

Q. You are speaking of the cribwork in the foundation? A. Yes, sir.

Q. Which might be dry at certain seasons of the year? A. Yes, sir.

Q. Could you tell in any manner whether such work had been contemplated? A. The wooden dam plans don't show it.

Q. And the specification does not show it. Is there anything else from which it could be gathered? A. It does not mention it.

Q. If concrete cribbing had been intended for the wooden dam, should the plan show it? A. Yes, sir.

Q. You regard that as proper practice in drawing such plans that they should show so much concrete on top? A. Yes, sir.

Q. The reason I ask the question is this, that I find the judge of the tenders for the wooden dam had to make a price for concrete, because in the printed form of unit prices at the end of the form of tender supplied by the Department, there is clause 22 'Concrete 1, 3 and 5 in the foundation.' I notice that in Lumsden's tender he gives a quantity of 1,000 yards, and Rainboth gives 200 yards, and Conroy does not give any quantity? A. I always give the tenderers the proposed quantities in the work. Now, these fellows must have made up these quantities themselves.

The CHAIRMAN.—I notice that Kirby & Stewart place no quantity opposite the concrete.

Mr. LAFE.—They only give the price per yard.

By the Chairman:

Q. Now you notice in two of the tenders for the wooden dam it is assumed that some concrete might be necessary. A civil engineer like Mr. Rainboth only puts in 200 yards, and Lumsden puts in 1,000, while neither of these quantities would be sufficient for the capping of the cribwork, would it, if it was to be done? A. I do not think so, sir.

The CHAIRMAN.—Witness is asked to inquire in the Department and ascertain if he can what was meant by putting concrete in that way in the specification, what concrete was designed or even thought of for the wooden dam, and what, if any, information was given by the Department to the tenderers as to the quantity which would be needed or the place where it would be needed, or anything about it for that matter.

By the Chairman:

Q. In the amended specification which you prepared for a concrete dam, you found it necessary to add a lot of definitions of concrete? A. Yes, sir.

Q. And in the original tender the price, Item 20, referred to common excavation, 21 to rock excavation, and 22 to boulder excavation without giving any definition? A. Yes, sir.

Q. And in the amended tender you found it necessary to give definitions? A. Yes, sir.

Q. Describing what was meant by that class of excavation? A. Yes, sir. You understand that most of the lawsuits are over the classification of material.

Q. Most of the lawsuits are over the classification of material, and therefore it is a good practice to be very careful and accurate? A. Yes, sir.

Q. Now, having got your plan ready and having made your specifications and the contract July, 1909, being entered into, or about to be entered into do you remember whether any calculation of quantities of concrete were made up so as to ascertain what the work would cost? A. Yes, sir, we must have made them up, I cannot recall it just now.

Q. You think they must have been made up, but you do not recall it just now. We find many months later a statement in the Minute of Council that the amended quantities and the ancient prices harnessed together would amount to $176,000 and some odd, so there must have been at some time a making up of the quantities? A. Oh, yes, I have no doubt about it. I had submitted the quantities, but I don't see one in my book.

Q. You do not find any statement of quantities in your letter book, the book which you hold there is your letter book, in connection with this Timiskaming work? A. Yes, from March, 1909, to August, 1911.

Q. Why does it stop at the latter date? Does it go on in another book? A. Yes, another book.

Q. But those dates would cover all you had to do with the contract, I presume? A. I think so.

The CHAIRMAN.—The witness deposits a letter book from March, 1909, to August, 31, 1911, dealing with the Timiskaming matter, and will produce another letter book. Witness also supplies a list of the letters in the letter book.

By the Chairman:

Q. Going back to the question of the amended specification which you put in, I find that you provided there very definitely concerning coffer dams. A. Yes, sir.

Q. And you used the following language: "(5) Coffer dams—The bed of the river and shores at the proposed dam show great quantities of loose rock and boulders. The east channel is deep and swift, even at low water stages, but the west channel is then dry. At high stages, however, the channels on both sides of the island are formidable streams. Attention is called to the possible difficulty of keeping the foundation pits unwatered, in order that the foundation concrete will be securely joined into the surrounding material in such a manner as to prevent any leakage. The contractor may adopt any form of coffer dam, he being wholly responsible, and all damage from freshets or from any other cause shall be at his cost and expense. The contractor shall bear the cost of constructing all necessary dams, compartments,

pipes, drains, etc., and their maintenance for the full time required and their entire removal when directed. The contractor shall also bear the cost of providing and satisfactorily operating all pumps required to keep the water entirely out of the pits and this shall be done without injury to the concrete. The price for unwatering will be held to cover all plant, labour, material, failures, accidents or damage that may happen at any stage of the work from storms, scouring, settlement, ice, flood, fire or other cause."

By the Chairman:

Q. Well, now, the actual work of coffer damming was commenced when, on the Ontario side, I mean? A. During the winter of 1910, I think that was the first work they did.

Q. What was the first work that the contractors did upon any part? A. The first work done by the contractors was excavation for the west abutment of the Ontario sluices on the Ontario side.

Q. That was done when? A. During May, it began in May and continued during the season.

Q. Did they do any excavation in the river bed itself on the Ontario side during that summer? A. Yes, sir, this excavation for the abutments was extended on towards the island.

Q. Would that excavation go deep enough for the concrete work at that time, were they doing it deep enough, or had it to be gone over again? A. I think that was taken down enough practically to concrete.

Q. Tell me this, would not there be interference by water when they commenced it, and during the early part of the summer? A. No, sir, in the part they were working at, the excavation was hand excavation.

Q. Was that pushed with all the speed and expedition that might have been possible? A. No, sir, it went very slowly.

Q. What was the cause of the delay? A. The need of proper excavation machinery.

Q. And what about men? A. The force was small.

Q. Did you protest against it? A. Yes, sir.

Q. In writing, or verbally? A. Both ways, I think, sir.

Q. And through the summer of 1909 you protested? A. Yes, sir, the summer was practically lost.

Q. Quite frequently I notice in a later letter of September 8, 1909, the Assistant Deputy Minister informed the contractors: "You are not making good progress on your contract. Employ large forces to complete work as soon as possible.' That statement is true, I presume? A. Oh, yes.

Q. You were not making good progress? A. No.

Q. And you were reporting that from time to time to the Assistant Deputy Minister, I presume? A. Yes, sir.

Q. Well, what excuse, if any, were given, what reasons? Perhaps I will put it this way, was there any good reason, as far as you know why the work should not have been pushed on? A. No, sir, there was no good reason.

Q. Had the delay serious consequences later on on the whole work? A. Yes, sir.

Q. If the work had been done early very little coffer damming would have been required on the Ontario side? A. Yes, sir.

Q. That coffer damming would have been low? A. Yes, the height would not have been at all great.

Q. And you say in October, 1909, they got steam shovels? A. Yes, sir.

Q. Then, from that until the next spring, the work went much more rapidly? A. Much more briskly.

Q. The superintendents up till October were not efficient? A. No, sir, there was only one who was not efficient.

Q. If early in 1909 a number of men who could have worked a steam shovel had been provided, the dam across the Ontario channel could have been completed in a short time, the Ontario dam could have been completed, the channel excavated, and later on the great pressure on the Quebec side relieved? A. Yes, sir.

Q. As a matter of fact if proper excavation and widening on the Ontario side had been done in time, a very great quantity of water could have gone off through that channel? A. Yes, sir.

Q. The contract of Kirby & Stewart contemplated the excavation of a channel on the Ontario side? A. Yes, sir.

Q. To be done by them? A. Yes, sir.

Q. And that was not done in 1909? A. No, sir.

Q. Was it done by the contractors at all later on? A. The lower part was done by the contractors during the latter part of 1910.

Q. And the upper part of it? A. The upper part of that channel was excavated by the Departmental dredge *Queen*.

Q. When? A. During 1910.

Q. Well, now, why didn't the contractors at some time or other do the upper part of the channel as they had agreed to do? A. A special arrangement was made to do that upper part by the dredge in order to force forward the work.

Q. In other words it was taken off their hands because they had not gone ahead with it rapidly enough. Put it this way, you found they had not done it, and you desired to have it done, and the agreement was made with the *Queen* to do it? A. Yes, sir.

Q. You say that if the contractors had pushed the work in 1909, they would in 1910 have been able to commence the work on the Quebec side at a much earlier and better season than they actually did commence, and the work therefore would have been in a much more forward state in the spring of 1911, when the coffer dam went out? A. Yes, sir.

Q. Furthermore, the clearing out of the Ontario side would have been completed much more thoroughly in 1910? A. Yes, sir.

Q. And so the pressure of water in the spring of 1909 on the Quebec side would have been much relieved? A. Yes, sir.

Q. On the matter of that dredge, there was a good deal of dredging to be done in any case by the Government that was outside of the contract? A. Yes, sir.

Q. And the dredge was proved to be inefficient for the work? A. Yes, sir, she was too light.

Q. There is still a large amount of excavating on the Ontario side to be done? A. Yes, sir.

Q. And isn't it designed to widen out the banks of the stream above the dam on the Ontario side? A. Yes, sir, we have done a part of that.

Q. And a large amount yet remains to be done? A. Yes, sir.

Q. Does the dredge help in that work at all? A. No, sir, we are doing it by a steam shovel.

Q. From the bank? A. Yes.

Q. And I presume you are only going down to low water mark, are you? A. We are taking it out in such a way that there is a bank of earth left between the water and the steam shovel.

Q. And the idea is that the bank is likely to be washed away by the high waters of the stream? A. Yes.

Q. That will be deep enough as that is only flood water you want to take off, I suppose? A. Yes, sir.

Commission adjourned.

OTTAWA, THURSDAY, January 25, 1912.

PRESENT:

Hon. A. B. MORINE, K.C. *Chairman.*
G. N. DUCHARME, *Commissioner.*
R. S. LAKE, *Commissioner.*

The examination of Mr. Charles R. Coutlee was continued from the previous evening.

By the Chairman:

Q. You spoke yesterday about some concrete work having been commenced by the contractors in the cold weather, and you made this remark: that if you had been a contractor you would not have done it. Were the contractors free to refuse to do concrete work in the winter? A. No, sir, they were not free to refuse. Did I refer then to concrete work or to excavation work?

Q. It is in connection with excavation work. I find this in the specification attached to the plan: "winter work—concree will be laid during freezing weather, only on the written instructions as to the precautions to prevent freezing. Work will be stopped and resumed as directed, materials and plant will then be kept heated and a mixture of salt will be added to the concrete." That was approved by you? A. Yes, sir.

Q. So it is quite clear that there was provision in the contract for heating the material and the plant? A. Yes, sir.

Q. And also, it is clear from these words, that work could be stopped and resumed as directed by the Engineer? A. Yes, sir.

Q. I find in a memo. by the Minister to the Committee of Council, dated the 10th November, 1910, in which the Minister was recommending payment to the contractors for heating some work which was being started on the Quebec end, this language used: that the carrying on of the concrete work during the winter will necessitate the housing of a section of the dam to be built, and the installation of a heating system to prevent the fresh laid concrete from being damaged during freezing weather. It would, of course, necessitate the heating? A. I know about that. The heating mentioned there was to accelerate the set, so as to have a thoroughly set concrete to oppose against the spring freshet. Concrete does not set very quickly in cold weather. The chemical action is slow in winter. The salt merely makes a freezing mixture; it does not set it up.

Q. Would not the provision I have just read to you, from the contract, cover that class of heating? A. No, sir.

Q. It seems to be broad enough in its language to cover it? A. Well, the idea of that is, that we do not like very much laying concrete in winter, but occasionally it is necessary. Now, when it necessarily must be laid, it should be laid with precaution, and that is to cover the precaution for laying concrete so as to prevent crumbling away in the spring time. The concrete will remain frozen sometimes all winter and then the chemical action starts in the spring time, when the weather gets warm enough. When you want to have a structure strong enough to resist freshets in the spring time, you must artificially augment the setting. That idea of having a covered building over the cement is to have the concrete not only deposited, but set and strong to resist. We will have to adopt that this year.

Q. You have a specification here in the contract, under which you have just told me that the contractors were bound to do work in winter or at any season of the year? A. Yes, sir, I should not say bound; probably I should say allowed.

Q. You mean to say that these words: work will be stopped and resumed as directed; only allows them to build in the winter? A. When we allow them to build concrete in the winter, we stop them under extreme conditions of weather.

Q. I am not speaking about what the contract means: I am asking you whether the contractors would be bound to go on if you would direct them to do so? A. Yes.

Q. What you mean is that they cannot do it in winter unless you consent? A. Yes.

Q. But they contract that they will stop and resume as they are directed? A. Yes, sir.

Q. And that the material and the plant will be kept heated? A. Yes, sir.

Q. Well now, what was there in that contract to prevent you from requiring them to heat this concrete as it was placed. Would not the terms of the contract cover that? A. Well, I would not think so. That refers, of course, to the placing so as to prevent injury during the cold weather. Now, what I wanted to bring about in that second place, there was a thorough set during the cold weather.

Q. You think that the provision in the contract probably refers to the heating of the material at what stage? A. My intention in putting that clause in the specifications was to have the heating done during the mixing.

Q. Before it was put into the moulds? A. Yes.

Q. That is what you had in mind? A. Yes, sir.

Q. Did you convey your mental impression of the meaning of that specification to the contractors before they took the contract? A. I do not think we had any conversation about that.

Q. Then, when they signed the contract the words stood to be interpreted according to the meaning they have there and not according to any mental impression you had? A. Yes, sir.

Q. At the time you decided to go on with the work in the winter of 1910-1911, on the Quebec side, did any discussion take place between you and the contractors as to the meaning of this provision in the specifications? A. Not that I remember.

Q. You just assumed then, for yourself, that it was not intended to cover the work of heating in the forms or moulds? A. Yes, sir.

Q. And the housing and heating which was undertaken in the fall of 1910-11, was that the actual heating of the form in which the concrete was to be put? A. None was actually laid. Our intention was to build a house over the whole structure.

Q. Over the whole dam from one end to another? A. Yes.

By Mr. Lake:

Q. To prevent fr ezing? A. Yes that system is ordinarily carried out.

Q. I mean as distinct from heating the moulds, simply after the concrete is got in to prevent it being frozen? A. No, sir, it was to heat it so as to accelerate the set.

Q. No heating and housing was, as a fact, undertaken? A. No, sir, we never got to that point.

Q. The coffer dam not having been finished, you never got to the point of doing that? A. No, sir.

Q. I want to read from a report by you to the Chief Engineer, dated 12th December, 1910, in which you say:

> "Unwatering has been a serious item on this contract, and the extreme high water of 1909 frightened or deterred the contractors' manager from building the dam across the Ontario channel. In consequence, the proper force was not employed and the summer time was lost so that the Ontario channel was not opened, and therefore, the Quebec channel could not be coffer dammed although the water ran very low that August."

That would be 1909? A. Yes.

Q. The outcome of the wasted time in 1909 was that excavation and concrete work had to be carried on during the winter of 1909-10? A. That would be in the Ontario channel, yes, sir.

Q. That is a correct statement of the situation? A. Yes, sir, I think that is correct.

Q. Then you go on to say:

"Spring water found a fairly good dam across the Ontario channel, but it was not high enough and the rising lake flooded the work, causing a delay from May to July, 1909."

Q. Now, that fairly good dam across the Ontario channel had been built at what time? A. I think the year 1909 there should be 1910. I find on reference to the copy that it says 1909, but it should be 1910, I think.

Q. How, did it come that the dam was not high enough? Was that a fault of design or failure to build to complete the dam as high as the design was intended? A. That refers to a coffer dam that was built across the Ontario channel. There were two or three coffer dams put across the Ontario channel, and I think this refers to the cribwork, one that was built during the spring of 1910. As to that not being high enough, I cannot remember the circumstances at that time as to why it was not made higher. That was part of their unwatering work, and they made and designed that themselves; it was a subsidiary dam.

Q. In December, 1910, the Assistant Deputy Minister asked you to arrange a meeting with Kirby & Stewart for general discussion, and the Assistant Deputy Minister notified Mr. H. B. McGiverin, M.P., that he had asked you to arrange that meeting. Was that meeting held? A. That was in September, 1910.

Q. December 3, 1910? A. Yes, I remember a meeting when Mr. McGiverin was present.

Q. And Mr. Kirby? A. Mr. Kirby, yes.

Q. And Mr. Stewart? A. I do not think Mr. Stewart was there.

Q. Who was there besides yourself? A. I think Mr. St. Laurent, Mr. Kirby, Mr. McGiverin and myself.

Q. What had Mr. McGiverin to do with the matter? He was their lawyer.

Q. And what is called general discussion; did that take place? A. Yes, sir.

Q. Over the whole situation of the work? A. Yes, sir.

Q. Now, I find in a letter afterwards that you used some language to imply that the contractors were getting into financial inability? A. That is what I understood, that the banks were closing in on them.

Q. Did they make that complaint to you at the time? A. I cannot say, sir, but that was the general opinion.

Q. Was that the general opinion of those at that meeting, or a general opinion conveyed to you by that meeting? A. I think it was an opinion I got previous to that meeting.

Q. At that meeting what were the contractors and their lawyer urging? A. My recollection is that they wished to get the price of their excavation raised. I think that was what they were urging at that time.

Q. Mr. St. Laurent has told us that they said they should have more for their excavation because it was of a different character from that which they had tendered for, a good deal of hard sand in connection with it, and so on; is that your memory of it? A. Yes, sir.

Q. Now, you repudiated their claim for a better price for excavation, did you not? A. Yes, sir.

Q. You advised that the excavation was that which was contemplated by the contract generally? A. Yes, sir.

Q. The contractors claimed that the kind of excavation they had in mind when they made their first tender was not that which was really met with in the work itself? A. Yes, sir.

Q. And on your side, your argument was that before they signed the actual contract in July, 1909, the amended specification had been made by you and the test

pits sunk and therefore that their contract contemplated the kind of excavation they were meeting with? A. Yes, sir.

Q. And, consequently, upon this discussion, you and the Assistant Deputy Minister agreed that they could not be allowed more for excavation? A. Yes, sir.

Q. Were you called into consultation with the Minister and the Deputy Minister upon the claim of Kirby & Stewart for some allowance? A. I do not think so, sir.

Q. You know that at that time it was decided that something further being forthcoming for excavation, that something should be allowed to them for the coffer damming of the Quebec channel. A. Yes, sir.

Q. And, on that subject did you come into any consultation with the Minister directly? A. I do not think directly, but I made reports upon it.

Q. Mr. St. Laurent has told us that he asked you to make that report dated 13th December, 1910? A. Yes, sir.

Q. And there is a long report here, winding up with the recommendation by you that they should be allowed the price of the coffer dam during that winter? A. Yes, sir.

Q. Now, when you were making that report, were you told that the Department had decided or contemplated making them an extra allowance of some kind? A. No, sir. I have always thought that their unwatering price was ridiculously low and that the Department could not have the same work done at anything like that price. I have always thought that price, if possible, should be raised.

Q. But you were the Government Engineer in charge of these works? A. Yes, sir.

Q. Now, as such, you would not enter into a piece of pleading with the Department to make an extra allowance for contractors' work unless you were urged by the contractors to do so or by your Department to do so? A. No, sir, I saw clearly myself that the Department could never get the work done.

Q. What do you mean by that? A. For that price.

Q. You meant to say that you saw clearly the contractors would not do it? A. That they would not do it or could not attempt to.

Q. They could attempt it? A. They did attempt it, as a matter of fact.

Q. What did you see at that time that moved you to do what, on the face of it, would be a peculiar thing, arguing with your own Department in favour of giving more to contractors, what moved you? A. Well, sir, I clearly saw that the Quebec channel was going to be difficult. I think I estimated it as a $20,000 coffer dam, and I thought, in the interests of the work—I think I stated that in that report; I knew at the time I was standing on delicate ground.

Q. I know, but in order to get you off that delicate ground, I want you to frankly put the position with regard to your writing that letter of December 13, 1910. The Commissioners have been forced to regard this letter as a piece of strong special pleading, by a Government Engineer in favour of an allowance to contractors, and upon the face of it you will admit that it has the appearance of that? A. Yes, sir, I admit that.

Q. Then the Commissioners can conceive a number of reason which might have moved you. One was, that the contractors themselves represented to you that they were financially unable to go on and would abandon the work. Another might be that having pressed their views on the Department, and the Department having decided to do certain things got a report which would make it possible for the Department to do it. Those things might have prevailed on you and I am anxious to give you an opportunity of saying why you wrote a letter of that kind? A. Well, sir, it really had nothing to do with either of these. I realized that the work was away behind. We were anxious to get it done, and it seemed to be a reasonable thing to undertake.

Q. We will take this position—still reminding you that you were Government Engineer in charge of the work and that there was a contract signed and sealed.

Mr. LAKE.—And a deposit.

By the Chairman:

Q. And a deposit, have you anything else to tell us? By the way, the term at which the work is to be completed is fixed in the contract itself as the 20th day of July, 1910? A. Yes.

Q. And the time was extended at various times? A. Yes, I was very careful to have that time extended each time.

Q. I find that on the 13th December, 1910? A. I think the first extension was for six months.

Q. You say the first extension was for six months; that would bring it down to what time? A. To the end of December, 1910.

Q. And on the 13th December, 1910, you notified Kirby & Stewart that their contract time expiring the 31st December, you were instructed to say that the Department would extend the time to the 30th June, 1911, and consequently, at the time you wrote that report, you were within a few days of the expiry of the extended time? A. Yes.

Q. And, consequently, you could have taken the work off the hands of the contractors under the terms of the contract at the end of December? A. Well, that is a difficult thing to undertake.

Q. I am not talking about the difficulty? A. I could not have taken it off.

Q. I do not mean you, I mean the Department. The contract expired in December, 1910, if a further extension were not given? A. Yes.

Q. Then, at that time, you say you saw that the work was not being pushed, that there was need of something more being done and that in order to get something more done you felt that a greater allowance had to be made to pay for the coffer dam? A. Yes, sir, I felt that.

Q. Merely allowing the contractors more pay would not, of itself, get the work done any quicker, would it? A. Well, yes.

Q. How? A. These men were evidently becoming sick of their job, and it was certainly an incentive to them to recommend that the coffer damming would be done.

Q. I say that merely allowing them more money would not, of itself, get more work done? A. Not of itself, unless—

Q. There must be something behind it? A. Yes.

Q. Did you allow them more money, because they were financially unable to go along any further? A. Well, the idea was—how shall I put that—the idea was to guarantee to pay them for the coffer dam. We did not vote them a certain amount of money, you understand?

Q. You guaranteed to pay them a fifteen per cent profit on the work? A. Yes.

Q. And, under their existing contract, they were bound to do that work without any profit except what they might make out of the contract? A. Yes, sir.

Q. And you believed they were going to lose money in doing this work? A. I believed they were not going to attempt to do it at all.

Q. Did you believe they were not going to attempt to do it at all, because they felt they would lose money on it? A. Yes, sir.

Q. Is that the only reason? A. That is the only reason.

Q. You did not feel they were going to refuse to do it because they were financially unable to do it? A. That is what I mean, that they were financially unable.

Q. There are two things—a man may be unwilling to do work because he is losing money which he is perfectly capable of losing, or he may be unwilling to do it because he is financially unable to do it, which was their position as you understood it? A. As I understood it they were financially unable to do it.

Q. And they were also unwilling to undertake it? A. Yes, sir.

Q. And they had made representation of their position to you, prior to this, had they not, in that discussion which took place? A. I think, Mr. Morine, that the idea of building the coffer dam by the Department originated with me.

Q. Not building it by the Department, but paying the contractors for building it, that originated with you? A. Yes, that is what I mean.

Q. I have no doubt, from what I see in the report, that it originated with you, but it might have originated from you because of some representation made by the contractors? A. No, sir, they never seemed to realize that their unwatering was the great trouble. They were always endeavouring to get the price of their excavation raised, and I did not see that the Department's interest would be furthered by raising the price of their excavation.

Q. But you did not undertake to recommend the Department to take a piece of work off the hands of contractors and do it at its own expense, merely because the contractors were not going on with the work as they ought to have gone on with it? A. No, sir, I did it because I wanted to see the work go ahead.

Q. Do you mean to tell me now that when contractors are slow with their work, that you as a practice recommend that they shall be paid an extra sum to do the work? A. Well, under circumstances, I would.

Q. What circumstances, for instance? A. That is, where the thing is in a hopeless mess, like that.

Q. What do you mean by a hopeless mess? A. As their contract was in.

Q. In what way? A. They were certainly financially unable to go ahead with that Quebec coffer dam as specified in the contract.

Q. When you say that, as to what you would know about their private finances, you must have depended on what they told you? A. Well, I really cannot tell, I do not remember their telling me that. I never remember their coming and saying they were embarrassed, but I have understood it. I do not know where I got the impression.

Q. Well, we will take that—because you understood from the impression, the authority for which you don't know, that they were financially embarrassed, you recommended that in face of the terms of the contract the Government should undertake the work and pay the contractors an extra sum? A. I recommended the taking over of that coffer dam because it seemed to me to be the only way in which the Department would eventually get that work done in any kind of time.

Q. Ordinarily, if a contractor fails to keep the terms of his contract the contract would be terminated and the deposit would be forfeited, would it not? A. Well, that is the theoretical idea.

Q. Ordinarily, I say, does it never occur that that is done in practice? A. I do not say it does.

Q. Then if a contractor makes money he walks away with it, but if he loses money the Department makes it good, is that the practice? A. I would not like to say that is the practice, but it seems that when a contract is signed it is impossible to get out of it unless the contractor is a good contractor and has plant and everything in his favour.

Q. Let us get over that—you are now speaking of what does as a fact occur in the departmental work as you have noticed it, and you say that on the one hand you have never known a contractor to return money because he had made a profit on the job; there is no dispute as to that? A. I do not suppose that ever takes place.

Q. And where a contractor fails to go on with the work from one cause or the other, your experience in the Department has come to the assistance of the contractor in some form or other, either in taking the work off the hands of the contractor or by giving the contractor an extra allowance? A. Yes, sir, that is my idea.

Q. In this case, seeing the work not going on for the reasons you have given us, did you recommend to the Department that they should endeavour to put pressure upon

these contractors to complete their work? A. I think I did, sir. We had several discussions about the situation as it existed.

Q. Anyway from what you observed, from what you heard, and from your belief that the contractors would not push that work satisfactorily, you decided to recommend the assumption of the cost of building the coffer dam across the Quebec channel by the Department the work to be done by the contractors, and they to be allowed fifteen per cent on their expenditure? A. Yes, sir.

Q. At this discussion which you had with contractor Kirby and Mr. McGiverin and the Assistant Deputy Minister did you tell them that that is what you would do? A. I do not think so. I think that all the discussion we had was mostly between myself and the Department.

Q. Meaning the Assistant Deputy Minister? A. Yes.

Q. Was the letter of the 13th December the result of the decision arrived at between yourself and the Assistant Deputy Minister that you would recommend an allowance in that way? A. It was.

Q. As a matter of fact, Mr. St. Laurent says it was? A. We had several discussions about the matter.

Q. In these discussions over the matter. which is referred to in the letter of December 13, and between you, you arrived at that conclusion and then you went out and for the purpose of a record you made this letter of December 13 so as to put in writing what you had been talking over in this discussion? A. There were several discussions with Mr. St. Laurent.

Q. Well, in the several discussions? A. Yes.

Q. The letter is a conclusion of the discussions? A. Yes.

Q. Just to go over that letter dated December 13, and to draw your attention, to two or three matters, I find this:

> "2. The Order in Council, 13th March, 1909, annulled the former—(that is the tender of the bulk sum of $76,000 for the wooden dam) and authorized the concrete structure at the unit prices provided for such an alternative structure in the original tender."

Now, bearing in mind the examination of yesterday. what warrant had you for this statement: the unit prices provided for such an alternative structure in the original tender? A. You remember, that in the original tender there was a price for concrete.

Q. But there was nothing in the original tender to indicate that it was intended to have an alternative structure? A. No, you remember I explained that to you,

Q. You would regard that language now as being inaccurate, would you not: at the unit prices provided for such an alternative structure; would you now express it: at unit prices provided for concrete in the original tender? A. Oh yes.

Q. You do not now stand by the statement in that letter that an alternative structure was provided for in the original tender? A. Except in that price there.

Q. Except that in the original tender you did find a price for concrete? A. Yes.

Q. And yesterday you said you did not know what concrete could have been meant by that expression in the tender? A. Yes.

Q. You also used this language:

> "Nothing is said in the original specifications that would lead to the idea of laying dry the river bed by coffer dams and steam pumping. A bulk sum price, however, of $4,000 appears in the tender, "Item 25 unwatering." In adopting the concrete design under this tender, the unit price of $4,000 fixed for unwatering remained, like the other prices, unchanged. The work, however, contemplated under 'Item 5 coffer dam' of the new specifications is very much more serious as a perusal will show."—That is quite true as you state it? A. Yes, sir.

Q. But you do not go on, in that letter, to point out that the work contemplated by the new specifications is precisely the work for which they contracted by the contract of July, 1909, and that all the circumstances which varied from the original tender, were all quite in view at the time the only contract was signed; that is the case? A. Yes, sir.

Q. And for a fair consideration of the equities of the case, what you say in the paragraph I have just read is partial, is it not? A. Well, it does not recite the fact that they signed the contract but that was taken as common knowledge.

Q. In other words then, this statement of yours is not a statement of all the facts? A. Not in detail.

Q. The persons who read it would know all the facts? A. Oh, yes.

Q. Why state part of the facts and not the other part, why not assume they knew them all? A. I think it fair to assume they knew the contract was signed.

Q. But you are pointing out in the original tender these things were not contemplated, which was only half the truth. You do not point out that later on these things were all provided for in the contract and furthermore, that the special notice of the contractors had been drawn in writing to the fact that the sum of $4,000 had to be taken for the whole work they were to do under the new contract, so that anybody reading that account alone, and not relying on the information he happened to have himself, would only get a partial statement of the facts? A. He might. Of course that was written to Mr. St. Laurent who was well apprised of all those things.

Q. But it was intended to go past Mr. St. Laurent? A. No, sir.

Q. You knew that was going to be made use of by Mr. St. Laurent for the purpose of a memo. which would go to Council later on; you were providing it for that purpose? A. No, sir, that was merely a report to Mr. St. Laurent personally.

Q. But you told us it was a report prepared to Mr. St. Laurent after several discussions had taken place for the purpose of putting something on record as to the reasons for this recommendation? A. Yes, sir.

Q. And you were putting forward only half of the reasons which existed and not the other half? A. You put me in a bad position there.

Q. I am trying to give you a chance to get out of it? A. I was writing that letter in perfect good faith to Mr. St. Laurent, who knew as much about the work as I did, except the details.

Q. Why write it at all? A. I do not remember why write it at all. It was just a report to him.

Q. Either it was a report upon which he was going to rely, in which case it ought to have been a perfect report, as complete as you could make it, or it should not have been made at all, because it is only half a statement of the truth? A. Pardon me, sir, that report was made to Mr. St. Laurent, and certainly he could rely upon every word that was in that report. It was made in perfect good faith.

Q. Did Mr. St. Laurent know all about the facts as well as you did? A. Yes, sir.

Q. What occasion was there for making a report of part of the facts to Mr. St. Laurent? A. As I take it, that report is a fair report on the whole situation.

Q. Does it make any mention of the fact I have pointed out that these things were all in view at the time the contract was signed? A. I took it for granted he knew that.

Q. Why not take it for granted he knew what you did report? A. Well, that is an ordinary report.

Q. I was giving you an opportunity of setting yourself straight in the matter; this is an official report? A. Yes, sir.

Q. It does not contain a correct relation of all the facts? A. I differ from you there, I think it does.

Q. Does it make any mention of what I have just pointed out, that all these things were held in view, and very much understood by the contractors at the time

they signed the contract? A. No, it does not. I said that. I did not think it was necessary to state that.

Q. And the reason you did not think it was necessary was because you told me you were relying upon Mr. St. Laurent's knowledge of the facts? A. Yes, sir.

Q. I am taking the language itself as an official record that was going to go out and be read by people who did know and by people who did not know, and I ask you if it is in itself a complete statement of the facts? A. Well, I thought it was.

Q. You could not have thought it was in relation to that matter, did it occur to you that it was not? A. It never occurred to me, sir, that it would be necessary to mention that.

Q. Why not? A. Well, it was common knowledge.

Q. But what you had mentioned was also common knowledge? A. Yes, but you know it is a general statement.

Q. But purely matters of fact such as you are relating were as much within the knowledge of Mr. St. Laurent as they were within your own knowledge? A. I should think so.

Q. Except for the purpose of making the argument, with which your letter winds up, and as a basis of that argument, it was not necessary to remind Mr. St. Laurent at all, was it; he would know it all. A. Usually, in making a report you review the facts generally and that is what that attempted to do.

Q. I point out a significant fact which completely answers what you have said. namely, all these things were held in view by the parties and specially considered at the time they signed the contract, and you don't mention that fact in the letter? A. I do not.

Q. Why did you omit it? A. I do not know why.

Q. Is not this true; that aware of the previous decision that had been come to that the coffer damming should be recommended, this letter is really an argument to lead up to a prior conclusion, is it not? A. That letter is to show my bearing toward the matter of coffer damming.

Q. You know that these matters had been considered when the contract was signed? A. I presume so.

Q. You did know? A. Yes, I do not think the contractors ever realized what the unwatering was.

Q. You are trying to go into their mental process, but you know as a fact they were notified that the sum of $4,000 covered unwatering? A. Yes, in the specifications.

Q. And you know further that the specifications framed by you, attached to the contract and signed by them, expressly, in the most explicit language warns them that the sum provided for coffer damming covers the whole coffer damming? A. Yes, sir.

Q. And all the coffer damming which was done was from the final plans and specifications and had to be done? A. Yes, sir.

Q. So there was no doubt whatever that so far as human ingenuity could draw the matter to the attention of the contractors, they were notified? A. Yes, sir, they were fully notified.

Q. And whether they realized all that meant or not is a mental process about which nobody can give evidence but themselves? A. Yes.

Q. In recommending that the government do the work of coffer damming in 1911, you thought that the coffer dam could be cancelled and the dam itself thrown out across the Quebec channel before the high water in the spring of 1911? A. Yes, sir.

Q As a matter of fact the coffer dam was not completed across the Quebec channel until May, 1911? A. The coffer dam was completed across in January, 1911, and was unwatered, I think, in February or March, 1911, and then excavation was begun in the Quebec channel for the main construction.

Q. Then, what happened? A. Then, the excavation proceeded until the coffer dam floated out in May.

Q. And no concrete work was undertaken? A. No, sir.

Q. Why not? A. Well, I think there may have been a few yards laid but they had not time to do it. The dam was first flooded from the lower side by water backing up over the lower dam, you understand there are two dams, one above and one below.

Q. And the water backed up from the lower dam and flooded the work? A. Yes.

Q. So that you would have to pump it out? A. Yes, sir, that would have to be pumped out.

By Mr. Lake:

Q. When did that take place? A. In April, 1911.

Q. Late in April? A. Sometime in April, I think it was about the middle of April.

By the Chairman:

Q. You, therefore, recommended that the work be continued in the winter by housing it in as already arranged by the Order in Council, and that the Department assume the risk and pay for the coffer dam in the Quebec channel? A. Yes, sir.

Q. Your recommendation was that the Department assume the risk and pay for the coffer damming in the Quebec channel? A. Yes, sir, I think that was it.

Q. Your recommendation was that the Department pay for the coffer dam which you estimated at $20,500? A. Yes.

Q. You contemplated paying for the whole coffer dam across the Quebec channel? A. I think so.

Q. But later on, I find on a memo. dated 4th January, 1911, and acted on by the Committee of Council on January, 14, 1911, a recommendation that authority be given to pay to the contractors over and above their contract price the actual cost of coffer damming and unwatering necessary to complete the dam across the Quebec channel, including the removal of the coffer dam, plus the usual per cent. for incidentals. Of course, you do not know what conception the Council had of 'complete,' because that word in their minds would depend upon the information they had as to what was already done? A. They mean to complete the concrete dam.

Q. And there is the actual cost of the coffer damming and unwatering necessary to complete the dam. You think that means that the Department assumed the whole cost of coffer damming and even the amount which had already been expended? A. That is what I understood. It should have been the main dam.

Q. And it would have been sufficient to say the coffer damming and unwatering of the Quebec channel? A. It probably would.

Q. And there would have been no mistakes about it then? A. Yes, or if they said the main dam.

Q. That would make it perfectly clear. After this letter of yours, did the contractors become active in the work? A. It seems to me that they did some work, yes, they did some work in January. In fact, they had the coffer dam built across the Quebec channel before the Order in Council was passed, agreeing to pay for it.

Q. Then, what happened in the matter of the work, did they get on with the work actively? A. Yes.

Q. What did you mean by writing on February 20, 1911, urging pressure of the work, and on February 24 saying to them: the condition of your contract is ridiculous and amounts to a breach of faith with the Department. You wrote that? A. Yes.

Q. What did you mean? A. When they got their coffer dam it seemed to me they worked pretty briskly during January, and then we had an awful time getting the coffer dam tight, and at that time they would not get the proper men to do the work and we had a great deal of trouble.

Q You used very strong language to them? A. Yes, sir.

Q. You charged them with a breach of faith with the Department? A. Yes, sir.

Q. What justified that language? A. Well, they were not using the proper men on that coffer dam work in my opinion.

Q Were they showing negligence? A. It practically amounted to that.

Q. And carelessness? A. It practically amounted to that.

By Mr. Lake:

Q. You thought your language was necessary? A. Yes.

By the Chairman:

Q. Did they create the impression on your mind that despite what had been done in assuming the cost of that coffer dam they were sick of the work and wanted to abandon it? A. Well, no, my impression was that they knew nothing about the work themselves, and their manager was hopeless.

Q. Although this work of coffer dam was actually being paid for by the Government with fifteen per cent profit, they still were not doing the work in a creditable fashion? A. No, sir.

Q. Had that class of inattention and misconduct as to practice marked the whole of the work done by these contractors under that contract from the beginning? A. As I explained to you their manager was very incompetent. The next two managers were good men, their third manager was incompetent.

Q. All through this work by letters and otherwise, you made complaint that the contractors themselves did not visit the work, as in your opinion they should have done, and did not keep in touch with the causes of fault finding? A. That is the fact.

By Mr. Lake:

Q. About what date did the first superintendent come on? The hopeless man you speak of? A. I think about August, 1910.

By the Chairman:

Q. Now, in March, 1911, the Auditor General objected to the payment for extra work under coffer damming, &c., and some discussion arose between the Department and the Auditor General, and I find a letter from you dated March 14, to the Assistant Deputy Minister—I would like you to turn it up and recognize it, if you have your copy there—in which you say: 'in connection with the bill for unwatering in favour of Messrs. Kirby & Stewart, contractors, I have to state.' Then you go on with a number of arguments which are practically the same as some of them contained in your letter of December 13. What was the occasion of writing that letter? A. I presume that was in connection with the accounts and with the objection of the Auditor General.

Q. But in writing Mr. St. Laurent about that, you would probably do so on a request from him to write him a letter on the subject? A. Possibly, but I do not remember the circumstance. What was the date of that letter and perhaps I can recall it.

Q. The letter was dated March 14, 1911? A. I have the letter here in my copy-book. That letter pretty well defines the position we were in.

Q. What I asked you was what were the special reasons for writing the letter at that time? A. I think it must have been that these accounts were sent back to me.

Q. Did you know of the objection made by the Auditor General? A. I presume I did, I presume the accounts were sent back to me.

Q. The contractors were Kirby & Stewart? A. Yes, sir.

Q. Do you know whether any other person was in partnership with them or not? A. I do not think so, sir, that is the firm name, so far as I know.

Q. With which of the partners did you most frequently come in contact? A. Well, I think we came in contact with their manager. I saw them occasionally. I saw both Kirby & Stewart occasionally but I came in contact more with their manager.

Q. Kirby is generally recognized as what is called the practical man of the partnership, he is a contractor in other respects? A. Oh, he has done street work, but that kind of unwatering work completely kills these men.

Q. You mean to say they were not familiar with that kind of work? A. Yes; the railway contractors always get into trouble when they undertake hydraulic work.

Q. You never had anything to do with them as contractors in any other Government job? A. No, sir.

Q. And therefore, when you took charge of the work and they became the contractors, you did not know whether they were competent to do the work, or not, from any previous experience? A. No, sir.

Q. In the midsummer of 1911, a discussion was held between Mr. Chrysler, K.C., and the Minister. I think the Assistant Deputy Minister told us he was present, concerning the position of the contractors, and the work, and so forth, were you called into that discussion? A. I do not think so.

Q. You do not remember seeing Mr. Chrysler there and the Minister over this matter? A. No, sir, I do not think so.

Q. At that time Kirby & Stewart requested that the work should be taken off their hands altogether, and one reason they gave was that their plant would be lying idle while the Government was building the coffer dam. Now, were you under the impression that Kirby & Stewart were consenting parties to the Government building the coffer dam altogether? A. Yes, sir.

Q. Would it be lying idle while the Government was building the coffer dam? A. Their concrete plant would.

Q. That would be true no matter who built the coffer dam? A. Yes, sir.

Q. At that time, June 29, the Government had not, as a matter of fact, undertaken to build the coffer dam by day work? A. I thought you were speaking of June, 1911.

Q. I am speaking of June, 1911? A. Well, the coffer dam had been built and failed at that time.

Q. The coffer dam had been built by the contractors, but I am talking of the actual work of rebuilding the coffer dam under the Government? A. That was not undertaken until August, 1911.

Q. I see that on July 29, Kirby & Stewart say that their plant will be lying idle while the Government is building the coffer dam? A. I do not quite understand that.

Q. In a letter from Kirby & Stewart dated June 29, 1911, to the Minister of Public Works, reference is made to the letter from Mr. Coutlee dated May 12, in which mention is made of the offer by Joseph Filion to conduct the work of reconstructing the coffer dam, and they go on:

> "Our plant is now idle and there is no certainty as to when the unwatering of the Quebec channel, cost of which has already been assumed by the Department, work will be commenced. The coffer damming may again be carried away and further delay caused to us, our plant, in case of accident, lying idle through no fault of ours, while the work of building the coffer dam is being carried on by the Department at its own cost and risk."

At that time, the Department had not undertaken to build the coffer dam at its own cost and risk? A. No sir, I think that was—

Q. You apparently had that in mind when you spoke of Filion's offer to conduct to employ him. In fact, I wanted them to employ him before.

posed to be a very good coffer dam builder and I wrote the contractors asking them the work? A. I think I wrote the contractor that Filion was up there. He is sup-

Q. Then at this time you really did not mean to say that the Government were going to undertake the work themselves? A. I do not think so.

Q. Then, he says here: "There is no certainty as to when the unwatering will be commenced." At the date of this letter, June 29, the contractor was still there? A. Yes, I presume so, it was very nearly brought to a conclusion then.

Q. But they had made no application for extension? A. No, sir, I think so, but I am not sure.

Q. Upon the mere point of extension of time there would be no difficulty in obtaining it? A. I should not think so.

Q. It was later on granted, was it not? A. I do not think any extension was given them, but I am not sure.

Q. This last extension was for six months and it would be up at the end of June? A. Yes.

Q. Up to the end of June was there any reason why some work should not have been undertaken as to coffer damming? A. It was pretty high water.

Q. I suppose there was preparation which might have been made for it? A. Yes, sir.

Q. Was the requisite timber on hand? A. No, sir.

Q. And no attempt had been made to get it? A. No, sir.

By Mr. Lake:

Q. Did the change in the site involve a large amount of work not originally contemplated? A. That is the change from the wooden dam.

Q. The change in the site? A. Yes, sir, it did.

Q. Then, are we to understand, that a concrete dam built in the changed site would be a more expensive structure than a concrete dam on the original site? A. I do not think it would. I should think that the present site was the more expensive of the two.

Q. It involves more expense than the old site? A. Yes, sir; you are now referring to the actual concrete dam itself?

Q. I mean the whole cost of the concrete dam on the new site? A. Would you like me to explain that to you on the plan?

Q. I just want the expense? A. I think it is more expensive. I do not think there is any doubt about it.

Q. So that the change of site threw a greater amount of expense upon the contractor?

The CHAIRMAN: Pardon me, that is another thing. The contractors were being paid unit prices. The dam might cost more but the contractors would be paid more.

Mr. COUTLEE: It was not a bulk sum contract.

Mr. LAKE: In a way it was.

The CHAIRMAN: Yes, but you have to separate the two so as to make it what is meant. As I understand it, witness said that the new dam on the new site cost more than the old dam on the old site, that is all you said so far? A. Yes.

By Mr. Lake:

Q. Is it correct that the change in the site of the dam involved a larger amount of work not originally contemplated? A. Yes, sir.

Q. Now, in January, 1911, is it perfectly correct to say in your opinion that the contractors have so far executed their work in a first class manner and have shown good will to meet the changed conditions? A. That would be in connection with the Ontario channel; what are you quoting that from?

By the Chairman:

Q. Mr. Lake does not say in connection with the Ontario channel. He asks if in January, 1911, that statement is correct or needs qualification? A. I think that is correct; there was no work done then in the Quebec side.

By Mr. Lake:

Q. And you would say: the contractors have so far executed their work in a first-class manner and have shown good will to meet the changed conditions. Do you? A. Yes, sir.

By the Chairman:

Q. Do you mean to say with regard to the quality of the work it was first-class? A. Yes, sir.

Q. But with regard to the time they had taken in executing the work had they acted in a first-class maner? A. Oh. no.

Q. Don't you think that remark was made generally as to the following up of their contract? A. The peculiarity of these men was that they were at the mercy of their superintendent. There never was an objection set up by them to doing what was asked; they finally did it.

Q. Let me put this question: If that statement were made to men who might know nothing about the matter except the statement itself, is the language just quoted calculated to convey a correct impression of the surrounding circumstances? A. No, it might give a wrong impression.

Q. And, as used, it might be true in a limited sense when applied to the quality of the work done? A. It would not be true in the larger sense as to their general conduct of the whole work? A. No, sir.

By Mr. Lake:

Q. Did you actually send a report about their qualifications? A. I think that which you read is an extract from a report of mine.

The CHAIRMAN.—No, that in itself is an extract from a memo. to Council.

By Mr. Lake:

Q. And it says:

> "The Engineer reports that the contractors have so far executed their work in a first-class manner and have shown good will to meet the changed conditions."

A. What date is that?

Q. 4th of January, 1911? A. I remember speaking about that.

Q. Did you report that? A. I think I did. I think I recognize the language some way or other.

Q. You think that that language is yours? A. I think so.

Q. And that you made no qualification upon it? A. I cannot say about that part of it. It would be a loose statement the way it is, I must admit.

By Mr. Lake:

Q. Would not such a statement by itself convey the impression that everything was satisfactory so far as the prosecution of the work was concerned? A. Yes, it might; when you began to read that I thought it was from a report of my own.

Q. And yet in February, you accuse them of neglecting their work, and doing what practically amounted to a breach of faith with the Department? A. Yes, sir, their manager was entirely incompetent.

Q. And yet that same manager had been on the work for a number of months? A. He began about August preceding that.

Q. He was there for a number of months preceding it? A. Yes, he had nothing to do with the building of the Ontario channel though.

Q. If you did use the language there referred to, when you speak of their executing their work in first-class order, you were referring only to the quality of the concrete work done? A. Yes, sir, it was a very good piece of concrete work.

Q. And you only used that language in the narrower sense, if you used it at all? A. Yes, sir, it is a very creditable piece of concrete in the Ontario side. I remember

indirectly it was criticised, and it is very likely that that is a statement I made with regard to the quality of the work. That is why the language sounds familiar to me.

By Mr. Lake:

Q. Was the sum $4,000 actually expended in unwatering the Ontario channel? A. The greater portion of it was, but I cannot give you the exact figures.

By the Chairman:

Q. Did you ever have the exact figures? A. I think I had, I think I estimated that at one time. It is difficult to get at this work done by the contractors, because we would not have the full details regarding it—but it runs in my mind that about $3,000 was expended.

By Mr. Lake:

Q. Had the work been done and done at the proper season, and pushed with expedition, would it have cost that sum? A. I do not think so.

Q. Did you report actually that the unwatering of Ontario channel had cost $4,000? A. I think I reported it cost $3,000. It might be in the letter of the 13th December. I find here that I reported that the amount for unwatering had been $4,000, three coffer dams that were built in that Ontario channel.

Q. In that report you do not call attention to the fact that had they pushed the work from the very beginning it should not have cost so much and that it was their fault it had cost so much? A. No, sir.

By the Chairman:

Q. Furthermore you said a moment ago that it cost $3,000, how do you explain the statement in your report that it cost $4.000? A. I was speaking from recollection when I said it cost $3,000.

Q. And you say now that it cost $4,000? A. I see, in my report, that it has cost $4,000.

Q. And you told us it had only cost $3,000? A. I was speaking from recollection then.

Q. You think now that your recollection was wrong and that it actually did cost $4,000? A. Yes, and I so reported. It is very easy to run away with $4,000 in that sort of work.

Q. How would you arrive at the $4,000? A. I would have estimated the two or three coffer dams that were built in that Ontario channel.

Q. But did you have any means of knowing that that actually did cost the contractors $4,000? A. Nothing outside of the estimate.

Q. You did not examine the contractor's figures? A. No.

Q. When you speak of two or three dams, are they successive dams, one after the other, was it necessary to have more than one dam at the same time? A. No, they built in the first place a very small earth dam for a coffer dam, and I think there was a second heavier dam and then finally they made a good cribwork coffer dam.

Q. The first two dams were insufficient and ineffective? A. They were effective, but they were insufficient.

Q. It would have been right to have built the final dam at the outset? A. I should think so.

Q. So that a good deal of expense charged to coffer damming in that $4,000 is for dams that were ineffective when they were built? A. Not a good deal of it, but a part of it.

By Mr. Lake:

Q. From your experience with these works, do you think that the first coffer dams you have mentioned could possibly have been effective? A. No, sir, they were inadequate.

By the Chairman:

Q. Do you ascribe to the incapacity of these people to handle work of that kind? A. Yes, sir.

Q I think you told us that you estimated the cost of the coffer damming and unwatering in the Quebec channel at $20,500? A. Yes.

Q. How much did it actually cost? A. I think $60,000.

Q. Do you often make such mistakes as that? A. I have not had the misfortune to make many like that.

Q. Was there any special reason why it cost so very much above your estimate? A. Yes, sir, on our present dam, undertaken by ourselves, we have expended, up to date, $50,000.

Q. You were asked if there was any special reason why your estimate on that dam went away off, and you were given an opportunity of stating the reasons why your estimate was so overshadowed by the real cost? A. It was just difficulty in staunching the dam. You will understand that to build a coffer dam is one thing and to make it tight is a more difficult thing. That is the best explanation I can give you.

Q. The actual cost of the construction of the coffer dam itself did not exceed your estimate to any great extent? A. I think I put the cost down as so much per cubic yard. The upper coffer dam I had at $10,000 and the lower coffer dam at $1,250.

Q. Part of that was already constructed? A. Yes. Now we had to build an additional dam and I have nothing there for placing staunching material in front of the dam?

Q. But part of it was already constructed and that part was actually included in this estimate? A. Yes.

Q. And you had the contractors' experience up to that time? A. Yes, I would like very much if you would go and see the place there in order to get an idea of what it looks like.

By Mr. Ducharme:

Q. Will you tell me who suggested the change from the wooden dam to the concrete dam? A. I do not know, sir.

Q. You do not know who suggested the change? A. No, sir, that was before I took hold of it.

Q. When you took hold of it, it was when? A. It was in March, 1909.

Q. Was the change of location of the dam necessary? A. Yes, sir, it became necessary with the new type.

Q. The new type, the new kind of dam? A. Yes, sir.

Q. When was that? A. That would be between March and May.

Q. Why did it become necessary on account of the type, to change the location? A. The original dam had a heavy base, you understand what I mean by a base.

Q. The foot? A. Yes, sir, a heavy solid base. Now, Mr. Matheson and myself wished to increase the waterway, that would be the cross-section.

Q. The sluice? A. Yes, sir.

Q. And in order to do that? A. In order to do that we had to make a dam of the stop-log type, but with the base right down to the bottom of the river, in fact it had to be excavated to the bottom of the river to obtain a seat for the dam.

Q. So that would make the dam more costly? A. Yes, sir, more costly.

Q. But what about unwatering and coffer damming? What effect would it have on the coffer damming and unwatering? A. Well, it would make the unwatering at least as costly.

Q. As what? A. As the former site.

Q. When was the coffer dam begun there on the second location? A. It was begun in October, 1910.

Q. On the Ontario side? A. No, sir, on the Quebec side.

Q. I am speaking of the Ontario side all the time? A. There was two or three dams made there, I cannot remember.

Q. Will these answers you have given me apply to the Ontario dam? A. Yes, sir, I am giving you for the whole dam.

Q. Would the change of location require the same change on the Ontario side as the Quebec side? A. Yes, sir.

Q. Do you remember when the coffer dam was made in the Ontario channel, would it be October, 1909? A. No, sir, the sluiceways had been built on the Ontario side then. The Ontario was finally blown out.

By the Chairman:

Q. The Ontario coffer dam? A. The Ontario coffer dam I should say was finally blown out November 17, 1910.

By Mr. Ducharme:

Q. When was it made? A. That must have been built in the spring of that year, I think.

Q. If Mr. Donnelly said it was built in November, 1909, would you believe it? A. Well, I may be confused in my dates. Oh, 1909 you say?

Q. Yes. A. It might have been built in 1909.

The CHAIRMAN.—You said it was blown out in November, 1910.

By Mr. Ducharme:

Q. When was it made? A. I think it was the spring of that year. It might have been the year before. I do not remember.

The CHAIRMAN.—Donnelly said it was made in the spring. They had been doing some work excavating in October, but the coffer dam was not built till the spring.

By Mr. Ducharme:

Q. From October, 1909, to November, 1909, was there much water at the place where the dam was to be built? A. Yes, sir, that was the spring flood. Is it 1910 or 1909 you are speaking of?

Q. 1909. A. 1909 was low water.

Q. Is it not the fact that it was perfectly dry at that time? A. The Ontario channel would be dry.

Q. I am speaking of the Ontario channel. A. I think so, sir.

Q. Would the place where the first dam was to be built be dry also? A. No, sir.

Q. Why? A. It is above the obstruction in the Ontario channel, there would naturally be obstruction in the Ontario channel.

Q. How much water would there be then? A. There would be about ten feet of water, nine or ten feet.

Q. If the second location was dry and the first location had ten feet of water, which of the two would cost the most to make the coffer dam? A. The wet location would cost the most.

Q. The wet location? A. I think so, in those circumstances.

By Mr. Lake:

Q. For what period was the Ontario channel dry? A. I think it would be dry during September and from September on until the following spring.

Q. Would there be any necessity for a coffer dam at all on the Ontario side?

The CHAIRMAN.—You mean in the new location?

Mr. LAKE.—Yes.

WITNESS.—There was not for some time at any rate.

By Mr. Lake:

Q. But they could have put a dam there if they had got to work at the right time without having to expend anything whatever in coffer damming? A. Practically so.

By Mr. Ducharme:

Q. Well then, you say the construction at the second location of a similar dam to the one that was intended to be made at the first location in concrete would not have cost more. If that dam had been built at the first location. I mean a similar dam? A. The concrete work would have cost about the same, but there was a great deal of additional excavation entailed by the present location.

Q. What kind of excavation? A. Excavations through this Ontario channel.

Q. That would be outside of the dam? A. Yes, sir.

Q. That is another thing altogether. That has nothing to do with the contract? A. No.

Q. I am speaking of the construction of a dam, nothing else? A. They would have cost about the same thing.

Q. Don't you think that it would have cost less owing to the fact that there would have been ten feet of water less to overcome on account of the coffer damming? A. I do not think so. Well, I think at first sight it would cost less. It would cost less I think.

Q. The second location would cost less than the first location? A. Yes, sir.

Q. Then the second dam was made to cost more on account of the changes that you decided to make? A. Yes, sir.

Q. In order to get more of a flow of water? A. Yes, sir.

Q. I suppose the coffer damming and unwatering would have cost much less at the second location than it would at the first? A. Yes, sir.

Q. What prompted you to make the change of location? It was you who suggested the change, wasn't it? A. Yes, sir.

Q. What prompted you to make it? A. To increase the waterway by carrying the plane of the lake over—

The CHAIRMAN.—He has already explained that.

By Mr. Ducharme:

Q. Do you know how long it took to make the coffer damming? A. In the Ontario channel, you mean?

Q. Yes. A. I cannot say.

Q. What Mr. Donnelly says would be alright, I suppose? A. Oh yes, he was on the ground.

Q. What kind of employee was Mr. Donnelly? A. You mean his position, sir?

Q. Was he fitted for the position? A. Oh yes, sir, he is a good man

Q. A competent man? A. Yes, sir, a careful man.

Q. Are you aware that when tenders were called the price mentioned for the coffer damming and unwatering was $4,000? A. Yes, sir.

Q. Are you aware that price mentioned by Mr. Lumsden was $54,000? A. I saw that yesterday, sir.

Q. Do you think that the tender made by Lumsden asking for $54,000 for the coffer damming and unwatering was exaggerated? A. I would have then.

Q. When the dam had gone on and you had started from the Ontario side, is it not the fact that when you reached the Quebec side at the soft portion of it, you would have been able to carry out the same kind of work throughout? A. I think a wooden dam could have been placed across the Quebec channel.

Q. Right through? A. I think so, sir.

Q. What about that part where the water came in? A. Well it might have scoured. I cannot give you an opinion about that. That bottom is irregular. It might have scoured.

Q. Do you believe that the dam would have gone the same as the coffer dam went? A. It might have, sir.

Q. You decided to make a change of location after you made soundings or pits? A. Yes, test pits.

Q. What prompted you to make those test pits? A. The idea was to assure ourselves of a depth at which solid rock would be found.

Q. Were there any pits where the old dam was to be built? I saw none on the plan? A. No, sir, I do not think so.

Q. How do you mean? You made pits in order to make the change of location without making test pits at the place where the dam was to be built? A. I am speaking of the present dam.

Q. What prompted you to make those tests and not where the dam had been contracted for? A. I never took any cognizance of the other dam at all.

Q. Why? A. Because I did not like the location on account of this dry channel below.

Q. Were you aware that the contract had been given out and signed? A. Yes, sir.

Q. And signed? A. It was not signed.

Q. You knew the contract was given out? A. Well, yes, yes I knew that.

By the Chairman:

Q. What do you mean by saying the contract had been given out? A. I understand that the contract had been awarded.

Q. That is to say they had been told they would be given the contract? A. Yes, sir. I took that for granted.

By Mr. Ducharme:

Q. Did you approve of the location on where it was intended to put the first dam? A. No, sir. After examination I did not, sir.

Q. If the location of the former dam had been made so that it would meet in the centre of the island, would it not have been better? A. No, sir, I do not think so. In my opinion the best location is the location we are building at to-day.

Q. That is not what I am asking you. As a general rule, if you had to prepare a plan for a dam, don't you think that using the island as part of the dam would be better than the way it was first intended to put it? A. I don't see any objections to the placing of it further down.

Q. Don't you think it would have cost less? A. Yes, I think so.

By the Chairman:

Q. To have placed it further down? A. Yes, sir.

Q. That is all summed up in your statement that you considered the last situation the better of the two? A. Yes.

By Mr. Ducharme:

Q. After you made this change in the dam you decided to put it higher up, didn't you? A. You mean higher in elevation?

Q. Yes. Is the dam built to-day higher than the one intended to be built at first?

By the Chairman:

Q. Than the wooden dam? A. No, sir, our dam is two feet lower than the top of the wooden dam.

By Mr. Ducharme:

Q. So really the top of the actual dam is lower than the top of the wooden dam? A. Yes, sir. We had to be careful about the towns of Liskeard and Haileybury. The Haileybury sewers were involved and the waterworks.

By the Chairman:

Q. But we have some evidence here from Mr. St. Laurent that after the wooden dam was designed it was intended to raise the level of the water about five feet, and the dam was made accordingly? A. Our idea was to make the lake at the upper end not higher than 590. I am speaking of the elevation above the sea, but we are going to reduce the low water level lower than formerly.

By Mr. Ducharme:

Q. Is the top of the actual dam higher or lower than the top line of the island? A. The top of our dam, sir?

Q. Yes? A. It is higher than the greater part of that island, but it is lower than the higher part of the island.

Q. You had some cribwork to do there, some filling? A. Yes, earth filling right across. That is the reason for that embankment right across.

Q. When I was speaking about the unwatering, there was a tender for $54,000. There was one for $15,000, one for $4,000, and one for $20,000. Now, which of these amounts would you at the time consider a fair tender? A. I would have been inclined to think the $15,000 or the $20,000.

By the Chairman:

Q. It was originally intended for a coffer dam for a wooden dam? A. For a wooden dam that would be rather higher.

Q. But for a concrete dam such as you designed later on, $15,000 or $20,000 would seem to be a fair estimate? A. Yes, sir.

By Mr. Ducharme:

Q. Now when you changed the location of the dam you found it necessary to make a new specification? A. Yes, sir.

Q. You knew that a new specification would increase the cost of the work? A. Yes, sir.

Q. Coffer damming as well as the concrete damming? A. Yes, sir.

Q. Did you report to that effect to the Deputy Minister, or Minister, or his Chief Engineer? A. I do not find a report covering that, sir. I was under the impression I had, but I don't find the report.

Q. How would the Department come to make such a change? A. Well we had several conversations regarding it. I am sure they would be made cognizant of the fact verbally.

By the Chairman:

Q. Of what fact? A. Of the estimated cost of the new dam.

Q. That would include in its figures the estimated cost of the coffer dam on the new site? A. Yes, sir.

By Mr. Ducharme:

Q. Do you remember having made those specifications? A. I have a recollection. Either Mr. Matheson or myself made them.

Q. But you know they were made? A. I am pretty sure sir.

Q. You made those soundings in the month of April? A. Yes, sir.

Q. Those tests? A. Test pits, sir.

Q. Were you there in the month of May? A. Yes, sir.

Q. Were you there when Messrs. Kirby & Stewart went there, or Mr. Kirby alone? A. Oh, yes. I met him on the work two or three times.

Q. Were they made aware of the change of location of the dam? A. Yes, sir.

Q. Did they approve of it? A. Well, I don't know. I did not ask them.

Q. They were made aware that there was to be a change of location in the dam? A. Yes, sir.

By Mr. Lake:

Q. Did they make any protest against it? A. Well, several times I had conversations with them, two or three times I should think, and they objected, my recollection is, to the classification of excavation. That was always their objection.

By Mr. Ducharme:

Q. That was not as to location? A. No, but as to the increased excavation.

Q. As a matter of fact they started to work in the month of June? A. I think in May or June.

Q. They say themselves they started in June. They started the work before they had the contract? A. Yes, sir.

Q. Did you give them the order to start the work? A. I do not remember.

Q. Had you issued instructions to begin the work? A. I do not think so, I think verbally.

Q. Cannot you remember that, how they came to begin work in the month of June? A. You see they had already supplied some material previous to my going on the work at all, and then they sent in apparatus in May, I think, April or May, and the work began about June as they state there. They had to put up derricks and one thing and another like that.

Q. Now the contractors say they were advised of their contract being awarded. Were they advised by you, or by whom were they advised? A. By the Department, sir.

Q. Not by you? A. No, sir.

Q. Are you aware that the Auditor General objected to this contract being accepted when the new tender was asked for? A. No, sir.

Q. You are not aware of that? A. No, sir.

Q. In making that filling on the island there, had you to excavate, had any excavation to be made on the island for this filling? A. It was filled from the Ontario channel.

By the Chairman:

Q. Had you to excavate the island itself? A. We likely did for a bank key.

By Mr. Ducharme:

Q. What kind of soil was it? A. The top was a lot of vegetable mould.

Q. What you call the key would be one foot? A. One, to three.

Q. About six feet wide? A. Something like that, I do not know exactly what was done there.

Q. At all events new specifications and new plans were made before the contract was signed? A. Yes, sir.

Q. And the work started? A. Yes, sir.

Q. You mentioned that you took different levels of the water in the lake? Where did you get that information? A. About the different levels in the lake?

Q. Yes, high and low water. A. We got that from the observations we made in March and from general information got from people in Liskeard anl Haileybury.

Q. There is no official record of the different heights of water in different years? A. No, sir, not up to that time, there has not been any record kept up there.

Q. In the first tender there was a schedule of prices annexed to the tender form in which concrete was mentioned? A. Yes, sir.

Q. But on the plan there was no concrete mentioned? A. No, sir.

Q. On the specification there was no concrete mentioned? A. No, sir.

Q. As a matter of fact, in practice, in order to get concrete should it not have been mentioned either in the specification or on the plans? A. Yes, sir, it should.

Q. Otherwise there was to be none? A. I would not say that the fact of mentioning it in the schedule would show that it was contemplated.

Q. It was a printed form. That is all there was. Nothing to show that it was the special work of the engineers? A. No.

Q. Amongst them there is an item called concrete, but really it does not form part of the specification or the plans? A. Yes.

By the Chairman:

Q. You promised me that you would look up to see what by any possibility this word 'concrete' in the schedule unit prices would refer to. Did you find out? A. No, sir. I asked Mr. St. Laurent and he said he did not know about it.

Q. Then having regard to the plans for the wooden plan and specifications and also the tender, you cannot give any meaning to these words 'concrete one, three and five'? A. None beyond that I gave yesterday.

Q. You cannot give us any meaning why these should be unit prices where no such work seems to be contemplated? A. No, sir.

By Mr. Ducharme:

Q. Is it not most likely that those printed forms contained extras that might have happened in that work, and those forms were simply put in there as being the nearest forms to apply in this case that the word 'concrete' was not specially put in there but was put there as in the ordinary form? A. I do not know about that. I think these are specially printed for each separate contract.

Q. You think these forms were made for this contract? A. I think so, sir.

Q. Now, Mr. Coutlee, was there any possibility with these plans or specifications of finding out the quantities of concrete that would be required? I am speaking of the first dam. A. No, sir.

By the Chairman:

Q. Looking at that original tender form, having regard to the fact that no concrete was specified in the plan or in the specification, wouldn't you think that that merely meant that if some concrete became incidentally necessary, the price would be the amount quoted by them per yard? A. Yes, sir.

Q. That is the interpretation you would put upon it? A. Yes, sir.

Q. If it should happen that some concrete work was necessary in that particular form, the price the contractor would expect would be the price they quoted? A. Yes, sir.

By Mr. Ducharme:

Q. If those forms were printed specially for this work, who would be the party who would know? A. I presume the Chief Engineer.

Q. You do not know? A. No, sir, I am not in the Department.

Q. On the Ontario channel works, was there any heating done to construct the concrete dam in the Ontario channel? A. Yes, sir, we put in steam pipes over the top of the concrete there.

Q. Was that put in there before the frost bit? A. Yes, sir, that was done in February of 1910.

Q. When the dam was built there some of the concrete froze? A. Yes, sir, some of the top layer froze. We had very cold weather there for a while.

Q. Was there much frozen? A. Not very much.

Q. Can you estimate the value of the damage that was done? A. No, sir; I may say this, it is possible to lay concrete in the winter time and allow it to freeze. Now that is not looked upon with great favour, and in the spring time you are liable to have the outside edges where it is frozen and thawed disintegrate. But of late years it has been the practice to lay in the winter time.

Q. Did you take it off? A. We took it off around the edges.

Q. Not all? A. Oh, no.

Q. Were you aware then that the time fixed for the ultimate contract was 20th July, 1910? A. Yes, sir.

Q. While you were working at it, from the way the work was proceeding, didn't you understand that they would be over that time? A. Yes, sir.

Q. Did you tell the contractor? A. Yes, sir.

Q. If that contract was to be concluded by the 20th of July, did it become absolutely necessary that a part of the concrete would have to be done in winter? A. Not absolutely.

Q. It is not finished yet? A. No, sir, it is not finished yet. At least I did not foresee a great deal of winter work.

By the Chairman:

Q. How do you mean you did not foresee, when you were making your plans? A. Yes, sir.

Q. If they had gone on with their work as they should have gone on from the beginning, there would have been no need of winter work? A. No, sir, I do not think so.

By Mr. Ducharme:

Q. In the month of November and December, they had merely started the Ontario channel? A. Yes, sir.

Q. Nothing had yet been done on the Quebec side? A. No, sir.

Q. And yet the whole work had to be finished on the 20th July? A. Yes, sir.

Q. Didn't you foresee there was no possibility of that? A. No possibility.

Q. Well, the contractor must have foreseen that? A. Oh, yes.

Q. From the fact that he had accepted the tender as it was, he must have been aware that he would be required, and would have to do it? A. Well, yes.

Q. When the work of coffer damming the Quebec channel began, was the concrete dam on the Ontario side finished? A. Yes, sir.

Q. There was nothing to prevent the contractor from going on with the coffer dam on the Quebec side while the Ontario channel dam was being completed?

By the Chairman:

Q. There was nothing to prevent him commencing the coffer dam anywhere? A. Yes, they could have begun the coffer dam.

By Mr. Ducharme:

Q. Could they have proceeded with the concrete work as the coffer dam was proceeding? A. Yes, sir.

By the Chairman:

Q. As a matter of fact didn't they make a start with half a dam on the Quebec side at one time? A. Yes, sir.

Q. For the purpose of doing some concrete work? A. That was in the fall of 1910.

Q. Before the whole coffer dam was over? A. Yes, sir.

Q. And you explained that some back water came up and stopped that? A. That was at another stage of the work. That was the low dam.

Q. They did some concrete work? A. Yes, they did some.

By Mr. Ducharme:

Q. When the Department agreed to put in the cost of the coffer damming, plus fifteen per cent, how much work was done then?

By the Chairman:

Q. On the Quebec side? A. There was none.

By Mr. Ducharme:

Q. At that time the whole Ontario dam was finished? A. Yes.

Q. How much of the Quebec channel was built? A. There was a portion of the coffer dam built about half way out into the channel.

By the Chairman:

Q. And some small amount of the concrete done? A. No, sir, it was after this. The concrete on the Quebec side was built only under the protection of the dam they finished in January or February.

Q. All that part? A. Yes, sir, that concrete was laid in the summer, about April.

By Mr. Ducharme:

Q. When that was decided was the part of the coffer dam gone then?

By the Chairman:

Q. When what was decided?

Mr. DUCHARME.—To give the cost, plus fifteen per cent.

WITNESS.—I think there was during October, 1910, a very high rise, and a portion of the original dam was taken out.

By Mr. Ducharme:

Q. How much of that was gone do you know? A. It seems to me the outside crib. It would be a matter of 30 feet by 25.

Q. So the fifteen per cent would only apply to the work there at that moment? A. My recollection is that my intention was that the whole coffer damming, that is, including those pits that had been built—I never put very much faith in those pits standing. I thought we would have to overlap.

By the Chairman:

Q. So far as you were concerned you intended to recommend that they should be paid for the whole cost they had been put to or should be put to in coffer damming the Quebec channel? A. Yes, sir.

Q. As to what the Minute of Council means, that is a matter for judicial interpretation?

By Mr. Ducharme:

Q. At that time when you agreed to grant fifteen per cent to the contractors, were you aware, or were you under the impression, that the contractor was losing money? A. Yes, sir.

Q. Were you aware of it? A. I was under the impression.

Q. If the contractors were then losing money, don't you consider it was their own fault? At that time had the contractor neglected the execution of his contract? A. Oh, yes, he was behind time.

Q. Much behind? A. Yes, sir.

Q. And part of it on account of having bad men to manage his work? A. Yes.

Q. And partly from his own negligence? A. From need of plant and machinery.

Q. You said he had two good foremen there? A. Yes, sir.

Q. How long were his foremen there? A. These two good men were there while the Ontario work was being done, the work in the Ontario channel, from the fall of 1909 till some time in 1910.

Q. You do not know why they left? A. Well, one man died on the work, the best man died on the work. The other man left to get other employment.

Q. Not the fault of the contractor? A. I do not think so, sir.

Q. Will you kindly read clause 6 of the specification. (Witness reads clause). Would not this clause cover any claim the contractor might make in the name of unwatering or coffer damming? A. It would theoretically.

By the Chairman:

Q. Mr. Ducharme was asking a moment ago whether when you recommended that the Government should undertake the cost of coffer damming you intended the fifteen per cent which was allowed to them to apply to all the cost of the coffer damming. Now, as a matter of fact, on examining your report, your recommendation, I find you said nothing at all about fifteen per cent? A. In the recommendation?

Q. In the recommendation? A. I do not remember about that, sir.

Q. I will read your words. These are the words of your letter of recommendation, dated December 13, 1910: "I therefore recommend that the work be continued this winter by hoisting it in as arranged for by Order in Council, and that the Department assume the risk and pay for the coffer dam in the Quebec channel." These are the words, and you see you say nothing there about paying them any plus. Then later, in estimating the probable expenditure at $20,500, you make no allowance whatever for fifteen per cent. You appear to have made no written recommendation of fifteen per cent. Do you remember making any verbal recommendation afterwards? A. I do not remember it, sir. It is customary to add fifteen per cent to cover tools and superintendence.

Q. I didn't ask whether it was customary. You mean to say that in certain cases, when the Department takes over work, it allows fifteen per cent for expenditure? A. Yes, sir.

Q. But that is a matter of arrangement between the Department, not a matter of right? A. No, sir, a matter of arrangement.

Q. And whether it should be allowed or not would depend on the moral claims of the contractors, wouldn't it? It would be a thing for the Minister to take into consideration and recommend to Council whether, in all surrounding circumstances, they should be allowed a certain amount? A. Yes, sir.

Q. A matter of policy therefore. It might be a justifiable thing in one case and not necessarily a justifiable thing in all cases? A. Yes, sir.

Q. So, so far as you are concerned, you had nothing to do with it in this case? A. No, sir.

By Mr. Ducharme:

Q. On 7th November, 1910, you wrote to the contractors that their contract limit was extended to the 31st December, 1910. Do you remember that? A. No, I do not remember.

The CHAIRMAN.—Well, that is so.

By Mr. Ducharme:

Q. What was the object in writing him this letter, or do you admit that you wrote the letter? A. Yes, sir. On two or three occasions I got the time extended.

Q. What was the object of writing them on 7th November that the time limit was extended to 31st December, 1910? A. I understand it is very good policy to keep the contract extended that way, that is, not to let it lapse.

Q. You knew at that moment it was really impossible to complete the contract by that time, 31st December, 1910? A. I think that extension was something like six months, I remember giving a few weeks.

Q. That was later on. The dredge *Queen* was working there? A. Yes, sir.

Q. All the time it worked there, did it work for the Government or the contractor, or both? A. It worked for the Department alone.

Q. Was there a man named Rogers on these works? A. Yes, sir.

Q. Wasn't he one of the partners of Kirby & Stewart? A. I do not think he was a partner. He is a connection of Mr. Kirby's.

Q. Was he there long? A. He was there a good deal during the winter of 1910-11.

Q. Wasn't he there in the summer of 1909? A. I do not think so, sir.

Q. Do you personally know if there was any lumber lost there? A. No, sir.

Q. By the flood taking it away? A. Oh, yes, some of it carried away.

Q. A great deal of it? A. Well, there would be the timber in the part of the coffer dam that went, the timber of the cribwork.

Q. In two instances.

By the Chairman:

Q. Both on the Ontario side and the Quebec side? A. On the Ontario side it was blown out purposely.

By Mr. Ducharme:

Q. But on the Quebec side it was twice taken away. On the first occasion it was taken away, was there much lumber lost? A. No, on the first occasion there would be a certain amount, not very much. On the second occasion there would be a great deal.

Q. Could you specify the amount? A. I cannot say.

Q. How long will it take before this work is finished, do you think? A. If the present dam holds out, I hope to have it finished by May of this year, or at any rate to have half the dam done and the Quebec channel, and finish it as soon as the spring flood is over. That is my hope.

By Mr. Lake:

Q. What do you estimate the whole cost of construction to be since it has been undertaken by the Government? A. That would be outside of their estimate, the work we have done this fall?

Q. Since you have taken it off Kirby & Stewart's hands? A. Since August 11, we have now expended $50,000, and I should say it will cost $25,000 more to complete the unwatering and do the excavation necessary.

By the Chairman:

Q. How much to finish this dam? A. And to complete the concrete work, about $45,000.

Q. That is $70,000 will be expended? $25,000 and $45,000? A. Yes, sir.

Q. Is there any other work outside of that that you have not put in these figures?

By Mr. Lake:

Q. Will that complete the whole dam from the Quebec side to the Ontario side? A. Ontario is completed practically. In addition there is some excavation to be done on the Ontario side. That would amount to about $5,000.

By the Chairman:

Q. Does that include the widening of the channel? A. Yes.

Q. In your opinion, $75,000 will have to be expended to complete the work? A. At least that.

Q. Possibly $100,000? A. Possibly.

Q. That is of course, hoping there will be no more coffer dams going out? A. Hoping there will be no further trouble.

Q. What is close sheet piling? What is meant by that term? A. Close sheet piling is the driving of piles touching one another, that is, they are in contact.

Q. Are they flattened piles or round? A. Yes. Frequently 8 x 10.

Q. Flattened timber? A. In close contact.

Q. Are you expecting to do some close sheet piling on the Quebec side? A. Yes, I think it has begun already.

Q. You mean that piling is to be done on the north side of the concrete platform. A. I think it means extending down into the ground.

Q. As a matter of fact, this piling is to be done at the north edge of the concrete platform? A. Yes.

Q. And also some at the south edge? A. Yes.

Q. To prevent back water? A. Yes, sir.

Q. Now that is a matter first of getting your proper piling and second of driving, isn't it? A. Yes, sir.

Q. Is that done with pile drivers? A. Yes, sir.

Q. Are there any pile drivers on the work? A. Yes.

Q. Did the contractors have them there? A. No sir. we brought them on ourselves.

Q. When? A. This fall.

Q. Was anything of that kind provided for in the contract or specification, or by way of extra? A. I do not think so, sir.

Q. Then you mean to say, in the original contract such a thing was not contemplated? A. No, sir.

Q. It could have been provided for by an independent contract I presume. Suppose that Kirby & Stewart had gone on and finished their concrete work it would be a mere question of giving them the contract to do that work. or it might have been done by some one else, couldn't it? A. It would not have been very good policy to put another contractor in.

Q. Not good policy? A. No.

Q. And consequently, if the contractors were willing to do this at a fair rate, the Department would naturally give them the contract to do it? A. Yes, sir.

Q. Now, some suggestion has been made that a further change in the design of the dam on the Quebec side should be made, a wider opening for the lakes to pass through? A. Yes.

Q. That was a mere question of change in the design? A. Yes.

Q. That would mean giving out a certain amount of concrete work, wouldn't it? A. That would mean rather more concrete.

Q. More concrete? A. Yes, sir.

Q. In which way, explain briefly? A. One pier would be left out, making an opening 45 feet instead of two openings of 20 feet in the pier, but the two piers on either flank of the wide opening would have to be extended down about 50 feet.

Q. You mean to say the pier, one pier on either side of the flank, and that opening would have to be made wider? A. Much wider, yes sir.

Q. Although you cut out one concrete pier, more concrete would have to be added to the other work? A. Yes.

Q. That would be a question of cubic yards of concrete? A. Yes, sir.

Q. And there would be no great difficulty, if you were making the concrete piers there, for the contractors to make those larger piers? A. No, sir.

Q. Now in the Minute of Council which is dated August 11, 1911, I find that Messrs. Kirby & Stewart have represented that it would be: "exceedingly difficult to continue the work under the present circumstances owing to conditions entirely beyond their control." Now what could be meant by such a phrase? A. I do not know.

Q. On August 11 the coffer dam had to be built? A. Yes, sir.

Q. And of course that was difficult work to do, that is, an expensive work to do, but do you know any reason, particular reasons, in the nature of matters, that made it exceedingly difficult to continue the work? A. No, just the difficulties that are always associated with that sort of work.

Q. If those words, "conditions entirely beyond their control" did not refer to their own financial circumstances. you would not know what meaning to place upon them would you? A. No I don't.

Q. Then this they say: "The close sheet piling proposed in the foundation would largely increase their risks by lengthening the period of difficult work to be done inside the coffer dam." Now inside the coffer dam means below, down the river? A. Between the two coffer dams.

Q. Between them we will say. The work to be done then was concrete work of all kinds? A. Yes.

Q. Putting sheet piling down at either side of the platform, would not necessarily lengthen the period of work if they had enough men to carry on the two works at the same time? A. No.

Q. The sheet piling could be going on while they were putting up the concrete piers? A. Yes, sir.

Q. I suppose as a mater of fact, the first thing in the concrete work is to get your platform down? A. And the cut-off beneath it.

Q. Then you proceed to build your piers? A. Yes, sir.

Q. And when that pier building was going on, the sheet piling could also be going on, couldn't it? A. Yes, sir.

Q. Then he winds up by saying: "The engineer in charge reports that under the circumstances it would be advisable and in the public interest not to proceed further with the construction of the dam as contracted for, and that the contract should be determined at the present stage." In the first place, did you as engineer in charge, make such a report? A. Yes.

Q. Well, he divides it into two parts. Did you report this:

"Not to proceed further with the construction of the dam as contracted for?" A. I think so, sir.

Q. Why not proceed with the construction of the dam as contracted for? What change did you want? A. The difficulty we found in making the cut-off wall beneath the concrete platform—it extends down 10 feet beneath the platform of the sluiceways.

Q. Is the cut-off up stream? A. It is to prevent percolation underneath.

By Mr. Lake:

Q. Right down below the foundation? A. To prevent seepage.

By the Chairman:

Q. It is situated right under the piers, is it not? A. Yes, it runs lengthwise to the dam.

By Mr. Lake:

Q. Across the river one continuous wall underneath? A. Yes.

By the Chairman:

Q. Its upstream edge would be directly underneath, the upstream edge of the pier? A. Yes, sir.

Q. Had that been contemplated in the original position, the cut-off wall? A. Yes, sir.

Q. Why did you use these peculiar words: "The construction of the dam as contracted for"? Doesn't that mean not to proceed with the construction of the dam under these contractors? A. I do not know that I used these actual words.

Q. They are in the Minutes of Council. I am asking you whether you recommended that the construction of the dam as contracted for should not be proceeded with? A. I think so, unless where I proposed to change this concrete cut-off wall, to sheet piling in that part.

Q. But still that was a change which, if the contractors had been perfectly satisfactory and had been proceeding with their work, could have been made without departing from the original contract. The contract was susceptible of allowing such a change to be made in design at any time, wasn't it? A. Yes, sir.

Q. And you recommended that the contract should be terminated? A. I think so, sir.

Q. And for all the reasons which you have given us in your evidence? A. Yes.

Q. The Minister's Minute goes on to say after the words I have just quoted. "The security cheque of $8,000 deposited in connection with the same to be returned to the contractors, and work already performed, materials delivered, and plant supplied, to be paid for". Now you didn't in your recommendation make any reference to the return of the security cheque, did you? A. I might have, I think I did.

Q. Did you make a written recommendation?

The CHAIRMAN.—Witness consulting his letter book says there does not appear to be any report in writing to that effect from him.

By Mr. Ducharme:

Q. I ask if you could tell me how much work was done when you received instructions to pay for the cost of the work? A. Yes, sir, that was on 24th January, 1911.

Q. Can you find how much of the work was at that time done? A. The coffer dam was across the channel then, 24th January, 1911.

Q. It was only from the 24th that the contractor should have been paid the cost? A. I do not know how it reads. I always thought it meant the whole work.

Q. You told me that the change of location in order to make excavation to help the flow of the water, made it necessary to make changes in the sluices which increased the cost of that work? A. Yes, sir.

Q. That was for the Ontario channel then? A. Yes, sir

Q. Would the same thing apply to the Quebec side? A. Yes, sir.

Q. Would you make the same change? A. Yes, to increase the excavation.

Q. Have you an excavation to make there too? A. Yes, there is some there.

Q. How much excavation did you make there in the Ontario channel? A. About 700 feet altogether.

By the Chairman:

Q. On the 12th July, 1911, a letter was addressed to the Minister of Public Works, and was signed by the Assistant Deputy Minister, and by you. Apparently, from the typing, it was done in the Department. Amongst other things, it winds up with this, that the security deposited in connection with this contract be returned as there is no default. First with regard to that statement, was this letter prepared by you or by somebody else and signed by you? A. That letter I had forgotten about. That letter was a joint letter from Mr. St. Laurent and myself covering the whole work and reporting in favour of taking it all off their hands.

Q. The point I asked you is, who prepared that letter? A. Now I do not know whether I prepared that letter. I think that letter was prepared in the Department.

Q. I presume you read it over at the time you signed it? A. Yes, sir.

Q. Well what did you mean by saying that the deposit be returned as there is no default? The time had expired, hadn't it? A. Yes, sir.

Q. Technically or theoretically, as you say, there was a default? A. Yes.

Q. While in their manner of conducting it they were very much in default. You are now conscious that you used those words? A. Not that word "default." I don't remember about that, though I remember discussing it.

Q. If you saw them, you didn't take much notice of them? A. I do not think so.

Q. You would not like to say now that there was no default on the part of the contractors, would you? A. No, sir.

Witness retired.

F. K. Bennetts, Ottawa, sworn.

By the Chairman:

Q. What is your position? A. Assistant Clerk to the Privy Council.

Q. At my request, Mr. Bennetts, and by the direction of Mr. Boudreau, what is his position? A. Clerk of the Privy Council.

Q. You have supplied me with certain memoranda by the Minister of Public Works, directed to the Governor General in Council, and with copies of certain Orders in Council based on those memoranda? A. I do not know about the copies of the Orders in Council. We have supplied the memoranda.

Q. You have only supplied us with the memoranda? A. Not the Orders. I understood you had the Orders.

Q. Well with certain memoranda. The first copy is dated November 28, 1908, signed by the Minister of Public Works? A. Yes, sir.

The Chairman—The following are the memoranda:—

"Report to the Council, 28th November, 1908. P.C. No.2631¾. Received Privy Council Office, 28th November, 1908, or 1st December. Minister of Public Works present. Approved by the Governor General, 18th January, 1909".

"Report to Council 20th February, 1909, P.C. No. 374. Received in Privy Council Office, 20th February, 1909. Presented to Privy Council, 20th February, 1909 (or 22nd February, 1909). Passed Privy Council, 12th March, 1909: Minister of Public Works present. Approved by Governor General, 13th March, 1909".

"Report to Council 11th November, 1910. P.C. No. 2287. Received Privy Council Office, 12th November, 1910. Presented to Privy Council 12th November, 1910, or 14th November, 1910. Passed Privy Council 21st December, 1910. Minister of Public Works present. Approved by the Governor 22nd December. 1910."

"Report to Council 4th January, 1911. P.C. 51. Received in Privy Council 12th January, 1911. Presented to Privy Council 12th or 13th January, 1911. Passed Privy Council 20th January, 1911. Minister of Public Works present. Approved by the Governor General, 24th January, 1911".

"Report to Council, 5th August, 1911. P.C. No. 1847. Received in Privy Council Office, 7th August, 1911. Presented to Privy Council 10th August, 1911. Passed Privy Council 10th August, 1911. Minister of Public Works not present. Approved by the Governor General, 11th August, 1911".

By the Chairman:

Q. You have provided with relation to each of those memoranda a report showing when it was received by the Privy Council? A. Yes, sir.

Q. When presented to the Privy Council? A. Yes.

Q. When it passed? A. Yes.

Q. And whether the Minister of Public Works was present or not? A. Of course you notice there are two dates for passing.

Q. Take this memoranda dated 28th November, 1908? A. It was presented to the Privy Council on the 28th November, 1908. There was a meeting held on the 28th November, 1908, and if we received that memoranda late in the day it would not go before that meeting. It would not be possible to put it before that meeting. But it certainly went before Council, either on that day or at the first meeting thereafter, which was on the 1st December, 1908. It passed the Privy Council on the 15th January, 1909. The Minister of Public Works was present on that day. It was approved by the Governor General on the 18th day of January, 1909.

Q. It was presented to Council on the 28th November or 1st December? A. Yes, that is our memorandum.

Q. It passed the Privy Council on the 15th January, 1909, and the Minister of Public Works was present, and was approved by the Governor General on the 18th January, 1909.

By Mr Lake:

Q. Is the date of Order in Council the date on which it passed the Privy Council, or the date on which it received the assent of the Governor General? A. The date on which it received the assent of the Governor General.

Q. That is always the case? A. Always the case, invariably. The other date is never mentioned. The other date is never known outside the Privy Council.

Q. The date of the Order in Council is the date on which it receives the assent of the Governor General? A. Yes, sir.

By the Chairman:

Q. You have prepared these memoranda from the records of the Department? A. Yes, sir.

And they are correct? A. They are, sir.

Q. I suppose you make a duplicate in every case? A. We have compared them to-day with the report of the Minister of Public Works and the original Orders in Council. There is no difference in any way, except in this one, No. 51.

Q. What is the date? A. January, 1911, some time.

Q. That is a memorandum dated 4th January, 1911? A. This was a very long memorandum. There is more in this than there is in that.

Q. A long memorandum from the Minister? A. We cut that down a little in presenting it to Council, but when we presented it to Council, when we presented the Minute to the Council, we attached this memorandum, so that all the information might be before Council. So while that Minute is not full—

Q. You mean, while the Minute of Council is not so full as the Minute by the Minister? A. The Minister's report was placed before Council and all the information was therefore given to Council just the same as if the entire information had been embodied in this Minute. The Public Works Department seemed to be quite satisfied with the Minute so consequently we allowed it to stand.

Q. The Public Works Department seemed to be satisfied with the Minute made in the form of a report to Council? A. Yes, sir.

Q. And cut it down to make it shorter? A. Shorter.

Q. As a rule the Minute which you prepared in your office is based upon the Minute sent in by the Minister? A. Yes

Q. And follows it as closely as possible? A. Word for word

Q. But sometimes, as in this case—A. If very long, we may abbreviate useless recitals. This recites a whole lot of things that have been recited a good many times.

Q. Therefore you abbreviate. But whenever you abbreviate in that way, you attach the Minute itself made by the Minister? A. Certainly.

Q. So that Council would always be in possession of what the Minister had said? A. Yes, sir.

By Mr. Lake:

Q. In any copies of Orders in Council supplied by you to the Departments, you would be very particular to have all the stops exactly as they appeared in the original Order? A. As a matter of fact, our copies are generally carbon copies of the Order, that is, they are simply the same thing.

Q. All your copies are certified? A. All our copies are certified and signed.

By Mr. Ducharme:

Q. The Order in Council, or rather the memorandum, is prepared by the Deputy Minister?

The CHAIRMAN.—The Minister's memorandum. Mr. Ducharme means?

WITNESS.—I presume so.

Witness retired.

OTTAWA, FRIDAY, February 2, 1912.

The Commission met at ten o'clock this morning.

PRESENT.

Honourable A. B. MORINE, K.C.,
Chairman.
G. N. DUCHARME, Esquire,
Commissioner.
R. S. LAKE, Esquire,
Commissioner.

R. J. ROBILLARD, Ottawa, sworn.

Examined by the Chairman.

Q. What is your official position? A. Chief Draughtsman Department Public Works, Engineers Branch.

Q. Do you remember the Lake Timiskaming Dam? A. Yes, I remember it in a way. I remember it went through my hands as far as specifications are concerned, but it is so long ago.

Q. Did you have anything to do with the original specification for the wooden dam? A. No, sir.

Q. Would you produce the forms to be used by tenderers in tendering for the work?

The witness produced three forms marked as Exhibits Nos. 1, 2 & 3. Exhibit 1, a printed form of a tender to be made by persons desiring to contract for a bulk tender. Exhibit 2, practically the same as far as the wording, except that at the bottom there is another clause to be used if there is a schedule to be attached. Exhibit 3, a form of tender where the prices are to be known as unit prices.

Q. In your position in the Department you have to deal with the forms of tenders? A. Forms of tenders,—I verify them to see that everything corresponds with the plans.

Q. That is generally your work there? A. I prepare the plans. Besides that I see about the preparing of plans and things like that. I have a certain number of men there.

Q. That is a general description of your duties? A. Yes, sir.

Q. By the word "plans" you refer to the drawings which are made? A. Yes, sir.

Q. By the word "specifications" you refer to the quantities and kind of work that is to be done? A. Yes, the kind of material used, the mode of construction, the length of the work, the breadth, and the way it should be done generally.

Q. When tenders are to be asked for, the plan or plans are made, specifications are drawn up, and the person desiring to tender can see those plans and specifications at the Department, and he can procure at the Department the printed form of tender which has been provided for? A. Yes, sir.

Q. Form 1 which you have put in is a form used for bulk tenders? A. Yes, sir.

Q. Form 2 which you have put in is another kind used for bulk tenders, but it has attached to it a schedule of prices? A. Yes, sir.

Q. In that Form the bulk sum is intended to cover all the work which is shown by the plan and by the specification? A. Yes, sir.

Q. And the schedule of prices is merely for extra work which is not shown either on the plans or specification? A. Exactly.

Q. And which may become necessary in the course of the work? A. Yes, sir.

Q. Exhibit No. 3 is a Form of Tender, where the prices are to be known as unit prices? A. Approximate quantities are given.

Q. As part of that Form of Tender a schedule of prices is given, in which there is a description of the work, and the approximate quantities, and blank spaces for the tenderer to fill in the rate per unit which he will ask for the different descriptions of work. In that latter case, Exhibit 3, what a man tenders for is the unit price? A. The unit prices. Yes, sir.

Q. The quantities are only approximate? A. Yes, sir.

Q. And of course will be varied in the actual work, but it is not the intention that the price per unit may be varied? There may be a variation in the quantity, but not in the price? A. Yes.

Q. And the total price that a man receives under that tender will later on depend on the unit prices paid for the quantities which the work has really amounted to? A. Yes, sir.

Q. In making up after tenders have been received, and are opened, and your memorandum is being made up in order that tenders may be awarded, what you do is to apply the unit prices quoted in the tender to the approximate quantities given in the tenders? A Exactly.

Q. And the result shows what the total charge will be? A. With that part of the work I have nothing to do whatever.

Q. I am asking as to the method; you know enough of the system to know that is the method? A. I know that is the way it is done.

Q. Have you any other forms of tender that you wish to show me? A. These are simply extra copies of the forms I have put in.

Q. You told us that in general practice the plans are provided by the resident engineer? A. Yes, sir.

Q. And of course are criticised in the Engineers Department here? A. Yes, sir,

Q. And changed or corrected as they like? And then the quantities, where are they worked out? By the resident engineer? A. The quantities are given by the resident engineer when there is a schedule attached to it in the form of tender.

Q. In the form of tender the quantities are those which the resident engineer has worked out, and which have been checked in the resident engineer's department? A. We do not generally check them, because we have no means of doing so.

Q. Who decides whether the tender shall be asked for in a bulk sum or a unit price? A. I do not know generally who does that, but the engineer sends in his specification, and the specification says it is to be a bulk sum, and if not it is to be on a unit rate.

Q. The engineer says that? A. The district or resident engineer who puts that in the specification, and I give it on the proper form of tender.

Q. When you say you give this it comes from the resident engineer to you? A. It comes from the resident engineer to the Chief Engineer, and the Chief Engineer sends them up to me.

Q. When you are told to provide for tenders you get your directions from the Chief Engineer? A. Yes, sir.

Q. Always? A. If he wants to change to a bulk sum or to a schedule or anything like that if he prefers it should be done by schedule rate the Chief Engineer would tell me otherwise I go generally by the specification made by the district engineer which is sent to the Chief Engineer in the first place, and sent me afterwards.

Q. But when it comes to you it always comes from the Chief Engineer's office? A. Yes, sir.

Q. Consequently if he forwards on the specification as the resident engineer has drawn it up you have got your order really from the Chief Engineer's office to make it in that form? A. Yes, sir. Although he does not tell me it is understood.

Q. Well that is the result, because by sending it on he has enclosed it? A. Yes, sir.

Q. Merely if he wants a change he orders you to do it? A. Yes, sir.

Q. Then, as far as you are concerned, you are merely carrying out the orders, implied or postive, of the Chief Engineer? A. Yes, sir.

Q. Had you anything whatever to do with asking tenders for the Timiskaming Dam matter? A. No, sir.

Q. Do you know who had? A. It is so long ago I cannot recollect exactly how the form was made. So many pass through my hands. I know it must have gone through my hands, because they generally do. It came to me, sent, I understood, by Mr. Perrault, but I cannot recollect.

Q. What was Mr. Perrault? A. He was sent out there I understood although I did not get anything official from anybody, I have been told that Mr. Perrault had been sent up there since—

Q. Mr. Perrault was working under Mr. Brophy, was he not, on the Ottawa River Works& A. He was working on the Georgian Bay canal, he was on the staff of the Georgian Bay canal.

Q. You say that it came to you from Mr. Perrault? A. No. it came to me from the Chief Engineer, but I understand Perrault must have sent it to the Chief Engineer, because they were his own plans.

Q. They were Mr. Perrault's plans? A. Yes, sir.

Q. I want you to speak to what you know? All you know is that in anything you had to do with tenders for the Lake Timiskaming Dam matter you acted on instructions received from the engineer's office. A. Yes, sir.

Q. You would have the original papers up there in the Department? A. No. sir.

Q. Where would they be? A. Well they are destroyed. These are old forms; the forms of all the original specifications pile up and fill a room in no time, coming from all over revise after revise, and I kept one year back generally.

Q. But you do not destroy plans of one year back for the work that is in progress? Do you? A. Oh no.

Q. This Timiskaming Dam is not finished yet? A. I know, but it has taken so long. I do not know how it was the printed forms are there.

Q. This work was only commenced in the latter part of 1908. We are now entering on 1912. It is only a little over three years since the work commenced. Surely you do not destroy the original specifications of work in progress? A. These happen to be destroyed. I have hunted for them.

Q. You say they must have been destroyed since you cannot find them? A. No, they must be destroyed, because I have a desk in my office for these specifications alone. The original specifications and the revises pile up so that when the drawer is filled up I destroy one year back. I did not understand that this work had not been done. I did not know anything about the dam not being completed. I do not know any more after the specification is given out, the contract has been made, and to whom it has been given, and when it has been completed we never get any news of that any more. I expected it was completed.

Q. In the original specification which has been supplied by the resident engineer, upon which tenders are asked for, surely they should be preserved until the completion of the work and the payment has taken place. Important questions of fact might arise? A. I thought it was sufficient that I signed in the Department for the specification. That gives a copy of the original with 'correct' and then they have printed forms. Thus I did not think the old original would be of any use.

Q. For the wooden dam in that matter there was used in fact a form in the shape of Exhibit No. 2 supplied by you here to-day, that is to say for a bulk sum, with a schedule of unit prices.

The witness is shown tender by Kirby & Stewart, dated the 19th of November, 1908, for $76,000.

Q. That tenderby Messrs. Kirby & Stewart is what you call a tender for a bulk sum, with a schedule of prices attached? Yes, sir.

Q. That is the prices to be applied to extra work? A. Yes, sir.

Q. And is exactly the form of Exhibit No. 2 which you have put in here to-day? A. Yes, sir.

Q. Well now in placing a form of tender before contractors you would be acting in the manner you have described as the result of directions received by you through the Chief Engineer's office? A. Of course I do not exhibit these afterwards. I have only the preparation of them, and then they go to the printer, and once they are printed they come to another office, which takes charge of these and distributes the specifications.

Q. Which office is that? A. Mr. Mackay now. It was then Mr. Coleman.

Q. Where is Mr. Coleman now? A. Assistant Secretary of the Department.

Q. And would Mr. Coleman have the placing of these forms before tenderers who came in? A. Some of them, and I go sometimes and get them from the room for a contractor, and take his name and address.

Q. When you say you prepare these forms, as a matter of fact your Department keeps printed forms of this kind on hand usually, does it not? A. Yes, sir.

Q. When you receive specifications from the Chief Engineer's office for a particular work, and a particular kind of tender form is to be used, how is it indicated by him as to what form of tender is to be used? A. It is indicated in the specification. It mentions for a bulk sum generally sent in by any district engineer. Then I prepare a form according to Exhibit 1 for a bulk sum.

Q. The specification would exhibit it? A. The specification mentions that.

The witness is shown the specification to the contract made by Kirby & Stewart, 27th July, 1909, and the Chairman states to him (relying on the evidence of Mr. Coutlee) that the first part of the specification attached to the contract was taken bodily from the specification which was used when the original tenders were asked for the original dam.

The witness says paragraph 6 as to price contains the words 'the price stated by the contractor in his tender" &c., &c., is the form always used with a bulk contract.

Q. And these words in the specification would indicate to you in your office that you were to prepare papers for a bulk tender? A. For a bulk tender, otherwise it would mention for a schedule.

Q. Then you say, looking at this specification which the engineer provided that that was the specification intended to be applied to a bulk tender? A. Yes, sir.

Q. According to the forms in use in the Department? A. Yes. Of course this special one which was sent me had a schedule list attached to it, because I would not have had it printed myself.

Q. And you say that when the original specification for the wooden dam was sent to you it had a schedule of prices attached? A. Yes, sir, asking for prices on it.

Q. Asking for prices? A. For prices, yes, on different kinds of materials, on different items.

Q. In the form which is used in Exhibit No. 2 for extra work? A. Yes.

Q. Such a schedule for a bulk sum when it was furnished to you would not contain the approximate quantities worked out? A. No.

Q. That is only used in Exhibit No. 3 where you are asking for unit prices? A. For unit prices.

Q. Approximate quantities would not be furnished to the Department where a bulk sum was desired? A. Well, sometimes they do.

Q. Merely by way of information I suppose? A. Well, it is left in the form of tender in case some extra work, some change of some kind, might come along, or more quantities be necessitated by the change.

Q. I here show you the file containing the tender for dam, &c., put in by Kirby & Stewart, dated 19th November, 1908, and already shown to you. That form of tender is the same as Exhibit No. 2 which you have put in? A. Yes, sir.

Q. And you will notice that in due course it has a schedule of prices to it? A. Yes, sir.

Q. In that schedule of prices there are no approximate quantities, no quantities are given, and there is no provision even by a blank form, no schedule for approximate quantities? A. Well this one here (indicating).

Q. There is a form, the word 'quantity' is placed on one line, but the approximate quantities are not provided? A. They are not provided, no.

Q. While in Exhibit 3, where unit prices are to be asked for, the approximate quantities are printed in the form of tender? A. They are modified for different works.

Q. I am speaking now of your usual practice? This tender form actually signed by Kirby & Stewart is a tender form for a bulk price, is it not? A. Yes, sir.

Q. And the prices quoted under the head of 'schedule' are intended merely for extra work as set out in the form itself? A. Yes, sir.

Q. You notice that in the tender signed by Messrs. Kirby & Stewart there is an insertion in the description of work in the schedule of two items of white pine? A. Yes, sir.

Q. And the same things appear in the tender by Mr. Rainboth, and also in the tender by Mr. Lumsden, but it does not appear in the tender by Mr. Conroy? Where would that change be made do you presume? A. I could not tell you.

Q. Do you recognize the writing in the figures in Lumsden's tender? A. No, sir, I do not know that writing.

Q. In Kirby & Stewart's tender the words 'white pine' are printed in ink, and it is impossible to say whether it was written by the person who wrote the words in the other two tenders? A. Yes, sir.

Q. And you cannot explain why it happened to be omitted in the Conroy tender? A. I cannot.

Q. And you do not recognize the writing in the other case? A. No, sir.

Q. In Lumsden's tender the amount given for 3 x 12 white pine is $6,048. In Rainboth's tender for the same thing, $13,500, and in Kirby & Stewart's the amount is not carried out? A. Not carried out. No.

Q. Then you say from this specification and from the practice of the Department and usual method in such circumstances that asking for tenders for that wooden dam according to Exhibit No. 2 and in the form in which the tenders were actually asked for was the correct thing to do? A. I suppose so.

Q. I mean to say correct as a matter of procedure through your Department? A. I could not answer that.

Q. The specifications for the wooden dam which you have been shown call for a bulk tender? A. Yes, sir.

Q. The form of tender which was actually placed before the contractors was bulk tender? A. Yes, sir.

Q. The form of tender which was actually used was the right form of tender for the specification which was provided? A. Yes, sir.

Q. And you do not know personally of any mistake having been made in that matter? A. Not that I recollect of.

Q. Mr. St. Laurent has said that through a clerical error a bulk tender was asked for when unit prices should have been asked for? Now you are not guilty of any clerical error in that matter, as far as you know? A. I do not recollect it. I had not been told to make it in any other way.

Q. You have never heard of any clerical error in connection with it? A. No, sir.

Q. You were never reprimanded for having made an error in that matter? A. No, sir.

By Mr. Ducharme:

Q. Mr. Perrault is not with you? A. Oh, no.

Q. Those forms you have just produced have been in use in the Department for how many years? A. Ever since I have been there. I have been in the draughting room now for about 12 to 14 years.

Q. Are they stiil in use? A. There was some change. This new form of schedule rate has been introduced by Mr. St. Laurent in the Department.

Q. When? A. I cannot say exactly.

By the Chairman:

Q. Which do you mean? Exhibit No. 2 or No. 3? A. We used formerly to do most of the works in bulk. This schedule of unit prices was introduced a few years ago.

Q. The schedule giving unit prices attached to a bulk tender? A. No, I mean the unit prices with bulk, Exhibit 3.

By Mr. Ducharme:

Q. Those No. 3 forms have been in use about how many years? A. I could not recollect exactly. Just about four or five, perhaps six years. I cannot tell exactly.

Q. Did you say that those specifications prepared by you were then printed? A. They were not prepared by me.

Q. You receive them? A. I receive them from the engineer, and I vertify them if they agree with the plan. I make all corrections in them, orthography, &c., and I send them over to the Chief Engineer's office, and they are transmitted from there to the stationery office in our Department, and from there to the Printing Bureau.

Q. What was it you burned every year? A. Old forms like this. The originals along with the revises. I have carloads of them. I have no room, I have to burn them sometimes.

By Mr. Lake:

Q. It is not the original specifications which are burned. A. About this, I never get any more news about dams. I expected that work had been done long ago.

By the Chairman:

Q. What you burned up was the actual copy for the specifications sent in by the engineer? A. Yes, with the revises besides that, and all other proofs.

Q. The corrected copy, as we call it in printer's terms? A. Oh, yes, the corrected copy.

Q. The copy supplied by the resident engineer, with your corrections marked on it? After that has been printed, and the printed form is ready then you destroy these other corrected specifications? A. Not then sir, about a year or so after.

Q. When you say the original specifications were burned up you mean those which the resident engineer had supplied, do you mean? A. Yes, sir, and the others also.

Q. What others? A. The revises of all these.

Q. You keep in your Department, and subsequently burn, what has been received from the resident engineer? A. Yes, sir, that is all.

Q. And what you send up to the printer is a copy made in your office? A. It is a copy from this original.

Q. The copy is made in your office? A. The copy.

Q. What you send to the printer is made somewhere? A. It is made at the printer's office.

Q. Then how do you get the specifications back again? A. I get a revise as shown as soon as they are printed.

Q. You get the revise back? What is it you burn? A. I burn these revises, all revises, with the original specifications received from the district engineer.

Q. You told us you send that original specification out? How do you get it back? A. I do not send the original out.

Q. I asked you, and you said you did? A. Perhaps I did not explain properly in the first place. There are two, they are made in duplicate. I keep one, and one is sent out.

Q. And the one that is sent out, what becomes of it? A. It goes to the printer, but I do not know what becomes of it afterwards.

Q. What you keep is the duplicate that has been supplied? A. A duplicate.

Q. And you destroy that later on? A. Later on.

By Mr. Ducharme:

Q. Are you in a position to say that this was a bulk contract? A. According to what I see in the form here it was bulk.

Q. And from the fact that in the printed form attached to this tender that white pine was not mentioned? A. No, I did not see that at all. Only the printed matter that was in them.

Q. As a matter of fact it was not put there in print? A. I do not know who put it there.

Q. As a matter of fact it was not printed in the form. It does not show that it was a part of the type. If it has been a unit price it would be mentioned? A. It was a bulk contract according to the specification.

By the Chairman:

Q. In connection with the tender for the wooden dam at Lake Timiskaming did you personally supply any information to any of the tenderers? A. No, sir.

Q. You are sure about that?. A. Yes, sir.

Q. To what official in that case would they apply for copies of the tender forms, and for the specifications? A. For tender forms some of them come in my office, and some go direct to the stationery office of our department.

Q. What is the regular place to supply it? A. There are only those two places. They are supposed to apply to the Secretary, but this is not done most of the time.

Q. They go for the tender forms either to your office or to the stationery office? A. Plans are exhibited in my office. I do not get the specification.

Q. The plans are exhibited in your office? A. Yes, sir.

Q. And the specifications are exhibited in your office? A. Yes, sir.

Q. If they wanted to know anything about quantities or materials to be used they would have to ask in your office for that information? A. They have to take that themselves. Take it all for themselves. We do not give any quantities.

By Mr. Lake.

Q. If the specification apparently is not quite clear in its nature? A. They might ask me any questions to make it clear, the way it is understood, but as far as supplying quantities or anything to the contractor that is not done.

By the Chairman:

Q. In the price list attached to the tenders for the wooden dam, there is item 22 'concrete 1, 3, 5 in foundation.' If a tenderer wished to know what quantity of concrete there would be in the work where would he find that indicated, or the materials upon which he could make up the quantity? A. He would have to measure that off the plans to scale it.

Q. To scale it off the plan, so that if there was to be any concrete in the work it would be shown on the plan. A. Yes.

Q. And would there be a reference in the specification to concrete? A. There would be generally, but I think there was no concrete shown on the plan for the wooden dam.

Q. Look through the old part of the specification which was used in the contract actually signed and see if you can find any reference to concrete? A. No, sir.

Q. I show you the plan for the wooden dam. Is there any concrete shown in that plan? A. Not that I see.

Q. And can you from your experience suggest where concrete would appear to be necessary to a contractor? A. I cannot see either by the plan or the specification where concrete would appear.

Q. Consequently he would either have to ask for information, or he would have to do without information. A. There is nothing in the specification or plan to indicate that.

Witness retired.

EDWARD PERRAULT sworn.

By the Chairman:

Q. You reside in Ottawa? A. Yes, sir.

Q. You are employed in the Public Works Department? A. I am.

Q. In what capacity? A. As engineer.

Q. In the Chief Engineer's office? A. On the Chief Engineer's staff.

Q. What are you named in the Civil Service list as? A. As Assistant Engineer.

Q. How long have you been in the public service? A. Since 1904.

Q. To what position were you appointed then? A. In charge of a section of the Georgian Bay Canal Survey.

Q. Prior to that where had you been employed? A. I was employed by the Ontario Government as Assistant Chief Engineer in the construction of the Timiskaming railway.

Q. Then in 1904 did you have an intimate connection with the Georgian Bay project? A. I had until the completion of the surveys.

Q. When? A. In 1904 I went right on with the work in charge of section No. 7.

Q. When were the surveys completed?. A. In 1907 practically.

Q. Amongst other things did you have anything to do with the inquiries and plans for the Lake Timiskaming dams? A. I had, I was instructed to report to Mr. George P. Brophy, Superintendent of the Ottawa River Improvements, in August, 1908. Mr. Brophy instructed me to prepare plans for a wooden dam on Lake Timiskaming which I did.

Q. And for the purpose of preparing these plans did you make surveys of the country? A. No, surveys had been made under Mr. Brophy previous to that, extensive surveys and the plans that Mr. Brophy furnished me showing soundings, showing the location of the dam were practically complete so practically what I had to do was to draw the dam.

Q. Then your work was office work? A. Practically.

Q. And it was done here in Ottawa? A. Yes, sir.

Q. From the data supplied by Mr. Brophy? A. From Mr. Brophy's data.

Q. Then is the plan which I now show you, your work? A. Yes, sir.

Q. That is a plan signed by Mr. Lafleur, the Chief Engineer but actually prepared under your supervision? A. Yes, sir.

Q. And with regard to the small drawing at the top showing the location of the proposed dam to the island, was that from data supplied to you? A. Yes, from data supplied to me.

Q. And the drawings of the islands and all that kind of thing were all taken from Mr. Brophy's plans? A. It was taken from the plan prepared under Mr. Brophy. It is on a smaller scale.

Q. Had Mr. Brophy prepared a plan of the dam showing the construction of the dam or simply a plan showing the location he proposed? A. There was a plan of Mr. Brophy's prepared under Mr. Brophy previous to that showing the location of the dam where this plan shows it and also I had made a report.

Q. And did that plan which we are now talking about also show as this does, the construction of the dam? A. Oh, no.

Q. It was only a plan of the location? A. Yes.

Q. There was also a report? A. Yes, to the Minister of Public Works by Mr. Brophy upon this survey for the proposed dam at Timiskaming.

Q. You were not responsible for the decision to locate the dam in that particular place? A. Well, in a certain sense, I was. I was instructed by Mr. Brophy to go and see the location and find out for myself if it was a suitable one. I did so, and reported to Mr. Brophy that I thought it was the best one there.

Q. Does the plan of that dam show any provision for concrete? A. No, sir.

Q. Have you anything to do with the specifications which were drawn up and accompanied the forms of tenders? A. I had.

Q. What had you to do with it? A. I made the various items included in the specification.

Q. You made up the specification, did you? A. Yes, I made up the specifications.

Q. I show you the first specification to the contract of July 22, 1909. Is that the specification to which you refer? A. I could not tell you unless by the date.

Q. This was the specification for the wooden dam? A. Well, that is the one I drew up, the specification for the wooden dam which was used at the time the tenders were given for the wooden dam was shown to the various tenderers.

Q. And did that specification call for any concrete? A. I think there was an item for——

Q. Is there anything in the specification about concrete? A. No, not that I remember.

Q. But in the form which tenderers were invited to sign, and which forms were for bulk sums, there was a schedule of prices for extra work? A. Yes, sir.

Q. And in that schedule item 22, is " Concrete, 1, 3, 5, in foundation." Would there be anything laid before these contractors to show them what quantity of concrete would be required? A. No, there was not.

Q. Can you tell me why Item 22 was put there? A. It was in case that in the foundation, though the figures given me on the plan showed the foundation is rock, when they came to build the foundation there might have been some fissures in the rock wherein the concrete would have to be used to fill these interstices and that is why that item was put in.

Q That formula, 1, 3, 5 is for a pure concrete? A. Yes.

Q. And such a concrete as you would be using just in foundation work in the way you described for filling up places? A. Yes, it is a very good concrete.

Q. But there are other mixtures of concrete? A. Yes.

Q. And in large works for piers, or possibly for a platform upon which piers were to be put, the mixture might be different? A. Yes.

Q. And might there be a more expensive mixture than 1, 3, 5? A. Not in large quantities. In large works such as you mention the proportions of rock would be larger there would be perhaps some large stones used as matrix.

Q. What they call commonly plums? A. Yes, but that 1, 3, 5 is considered very good.

Q. In the mixture of more rock of the kind you describe the price would be cheaper? A. The prices would be cheaper.

Q. In the form of tender used in connection with the wooden dam for a bulk sum, if any concrete were found to be necessary, as it did not appear either in the plan or specification, it would be an extra would it not? A. It would be.

Q. And presumably from the plans you have before you and from the data, it could only be necessary in small quantities? A. Yes, it would be in small quantities.

Q. No large amount of concrete work was comtemplated? A. No it was not.

Q. You remember the occasion when tenders were asked for the wooden dam at Timiskaming? A. I do.

Q. Was the plan kept in your office? A. No, it was sent to the Chief Engineer's office.

Q. Where was your office at the time? A. On Sparks St. here.

Q. Did the plan go back to your office from the Chief Engineer's office? A. It did not.

Q. Mr Rainboth states here today that he thinks he saw the plan and specifications in your office on Sparks St.? A. That is previous to the tenders, before the tenders were awarded.

Q. That is what I was talking about. I mean to say that when persons were contemplating making tenders and were looking for information, was the plan in your office? A. It was.

Q. And the specification also was in your office? A. No the original plan was in my office.

Q. What do you mean by the original plan? A. You have it, the plan made on paper. The plans were supposed to be seen at the Chief Engineer's office in the West Block. These plans were all sent to the Chief Engineer's office but notwithstanding that I had a copy in my office from which many tenderers could get information.

Q. The tenderers could get information either at your office or at the Department? A. Or in Toronto at the office of Mr. Sing, the District Engineer.

Q. If it were in the mind of any person at the West Block to change from wood to concrete, at that time, did you know anything about it? A. I did not.

Q. And therefore if tenderers could hear about such a possibility at all, it would be at the West Block they would get their information? A. I do not know where it would be, I know that as far as I was concerned, I did not know there was any such intention.

Q. And would you describe yourself as the Engineer in charge? A. Engineer in charge of those plans at that time.

Q. A person desiring to tender, and looking at item 22 of the schedule of prices, "Concrete 1, 3, 5 in foundation," how would he ascertain what was meant by that term? A. Oh, well, I think any tenderer on that class of work would know that concrete to a certain amount would have to be used, because in order to have a dry foundation.

Q. It would have to be used in the manner you have described? A. Yes.

Q. What you mean is that persons acquainted with the character of the work would understand from the words "in foundation" what was meant was the kind of work you have just spoken of in filling up interstices of one kind or another in the rock? A. Yes.

Q. And those words "in foundation" then would not mean that concrete was to be used in any large quantity in the building of the work? A. No.

Q. They would not understand that the foundation itself was to be a concrete foundation? A. No.

Those words "concrete 1, 3, 5 in foundation", would not cover for instance the platform upon which a dam is sometimes put? A. No, the plans do not show so.

Q. And certainly would not cover concrete piers? A. No.

Q. Would a quotation for concrete to be used in that way and in that limited quantity be ordinarily any fair measure or index of what a contractor would desire for a large concrete structure? A. No. That is, if it was intended to be a very large

quantity, a tenderer I should think would make his price a little lower. In this case I think that the tenderer might claim also that owing to the very limited quantity it would perhaps cost him much more to bring that small quantity of cement or having to excavate stone and getting sand, might also consider it entitled him to a higher price.

Q. A higher price for the smaller quantity? A. Yes.

Q. You may lay it down as a general rule that the smaller the quantity the higher the price? A. Yes.

Q. Taking unit prices, there cannot be any question that the unit price for a concrete dam would be smaller than the unit price for concrete in foundation? A. To my mind it would be lower.

Q. Because, in the first place, a large quantity of cement means generally a lower price per barrel? A. Yes, and of transportation, &c.

Q. Then again, a large quantity of cement means mechanical means in mixing, and all that sort of work. Later on you were asked by the Department to provide calculations of quantities for a concrete dam? A. I was.

Q. That was at the outset a concrete dam, concrete replacing wood in the same dam in the old location? A. Yes, sir.

Q. And how did you arrive at the quantities in such a case as that? A. You take that old plan of a dam of wood and you start to calculate quantities of concr te in that structure. How would you do that? A. Well, I calculated, if my memory serves me right, the replacing of the various piers, wooden piers, by concrete piers, and calculated to change in sizes, &c., owing to the fact of concrete being the material to be used, the quantity that would be required and also replacing this wooden part in the foundation by concrete.

Q. That means that you had to lay down for yourself the number of piers which would be necessary in case a concrete dam was designed? A. It was.

Q. Would that number of piers be the same as the wooden piers? A. If I remember right, no, sir.

Q. Then again, the size of the concrete piers would be very different from wooden, would it not? A. Very much different.

Q. And you had to lay that down for yourself? A. Yes, sir.

Q. What you had practically to do was this: You said, if I were putting a concrete dam there, in place of wood, what height and width and breadth of concrete would I require, and how much concrete would I put into the foundation—and so you arrived at the quantity? A. Yes, sir.

Q. And all that, therefore, would be just a matter of calculation by yourself? A. Yes, sir.

Q. There was no plan to show it at that time or anything of that sort? A. No, sir.

Q. Having arrived at the quantities in that way you proceeded to calculate what the cost of a concrete dam would be at the prices per yard of concrete, which had been given in the original tenders for a wooden dam, and this document dated January 14, 1909, showing that the dam, if constructed of concrete, would cost $108,582, was your calculation, arrived at in the manner described, applying to the quantities the prices given by Messrs. Kirby & Stewart? A. Yes.

By Mr. Ducharme.

Q. Did you know of the change of location of the dam? A. I understand there has been a change, I have not seen it.

Q. You are not sufficiently familiar with the surroundings of the place there, to give from memory an opinion on the propriety of the change? A. I could not tell you because I do not know where the change has been.

Q. Only when you went there yourself you thought the best place would be— A. As shown on the plans submitted by me.

Q. On account of being above the rapids, I suppose? A. Yes.

Q. And in still water? You made a calculation of the cost of this dam and reported it on January 14, 1909 at $108,550? A. Yes, sir.

Q. At whose request did you make that? A. The Chief Engineer's.

Q. The Chief Engineer asked you to make this calculation? A. Yes.

Q. You made this calculation another time? Do you remember when? A. I do not remember that. The previous calculations were for a wooden dam, those are the calculations for $78,000 and some odd.

Q. You never had anything to do with the $176,000 valuation? A. No, not from the time I think it was in March of 1909 I was relieved of anything connected with the dam at Timiskaming.

Q. Is this your valuation of the cost of the dam made on November 20, 1908? A. Yes, that is for the wooden dam.

Q. You made this on November 20? A. Yes.

Q. The tenders were called for on October 20? How did they ask for tenders and asked for a deposit of $8,000 which is supposed to represent 10 per cent on the contract, how could they fix that amount when you had not yet made the valuation? A. I had made that valuation.

Q. When?. A. Previously. This is the date I furnished the Chief Engineer with details.

Q. There had been another valuation? A. This is the valuation which had been made and which I had in my office.

Q. You only forwarded it on October 20? A. Yes.

Q. In your estimate what did you include for concrete? A. I forget now, unless I look it up. I do not see any item about it there. As I said here, it was only calculated as an extra. If any concrete was used it would be an extra.

Q. On account of the formation? A. Yes.

Q. Outside of that, you had no connection whatever with the giving out of this contract? A. No, sir.

Q. Or with the construction of the dam? A. No, sir.

Witness retired.

The Commission took recess.

EDWARD RAINBOTH, sworn.

Examined by the Chairman:

Q. You are a Civil Engineer A. Yes, sir.

Q. Residing in Ottawa? A. Yes, sir.

Q. In November, 1908, you were a tenderer for the wooden dam at Lake Timiskaming? A. Yes, sir.

Q. I show you the official file. Is that your tender? A. Yes, that is it.

Q. Dated 19th November, 1908? A. Yes, sir.

Q. For a total sum of $115,609? A. Yes.

Q. Where did you get that form of tender? A. In the Department.

Q. Did you apply for it yourself? A. Yes, in person.

Q. Do you remember at what office you got the form? A. I am not very sure. I remember calling at Mr. Perrault's office on Sparks St. I think the plans were there to be examined and it seems to me I got the forms up at the Department in the West Block.

Q. Would you know Mr. Robillard who went out just now? A. Yes, I just met him.

Q. Does that remind you whether you got it from him in his office? A. No, it does not.

Q. Then the stationery office, I am told, is the only other place? A. Is there not a man named Mr. Coleman, in charge of these things there?

Q. Yes. A. Whether on that occasion or on some other occasions I have got some forms from him. They have sent me over from the draughting room with a message to his office.

Q. Then you saw the plan at Mr. Perrault's office, you got the form from Mr. Coleman and where would you see the specifications? A. I would say with the plan.

By Mr. Lake:

Q. This is all to the best of your recollection? A. Yes, because I do not remember ever seeing plans without specifications.

By the Chairman:

Q. Would you look at the tender please. That was for a bulk sum, was it not? A. Bulk sum, yes, with unit prices.

Q. What are those unit prices applicable to? A. To all material in place.

Q. You would not be paid on the unit prices, would you, you would be paid a bulk sum? A. I understand from this tender it was a bulk sum. You were to take out your own quantities and make out your prices on these quantities so that if you were out on your quantities you would be out on your bulk sum.

Q. Quantities would be merely a guide for you to know how to make up your bulk sum? A. Yes, but still the bulk sum was the important thing.

Q. But the quantities would be supplied to you? A. No sir, the quantities were not supplied. I had to take out my own quantities from the plans. I rather baulked at that because I thought they ought to furnish up the quantities because it means an awful lot of work to take out the quantities in that way.

Q. But in that form of tender it would not make any difference in the final result whether you had worked out the right quantities or the wrong quantities? A. Yes, sir, I think it would.

Q. How is it? A. Because it was up to me to take out those quantities properly and accurately.

Q. But the final result would be that you would get the total amount you applied for? A. Yes, but supposing that those quantities were too small I would be out the difference.

Q. The final result would be different to you but not to the Government would it? A. Well no, not different from the bulk sum.

Q. The Government would still pay the same amount? A. Yes.

Q. And if a mistake had been made, you would be the loser? A. Yes, unless there was some change in the work, some extras put in.

By Mr. Lake:

Q. If extras were put in you would be paid on unit prices? A. Yes.

Q. Was that the only reason to put in unit prices? A. Oh no, I was obliged to put in unit prices, the specifications called for unit prices and there is a column for them. That tender had to be properly filled in or it would likely be rejected.

By the Chairman:

Q. The schedule called for them but if you look at the tender itself it says: "I also offer to execute any extra work and to furnish all labour, &c., at the prices given in the schedule." A. Yes.

Q. So the purpose of putting that schedule in this tender besides putting a bulk sum in would be so that the Department would have a unit price upon which they would pay you if there was any extra? A. Just so.

Q. I notice this item 22, "Concrete 1, 3, 5 in foundation." We have been told by the last witness and others, that the plan shows no concrete? A. No concrete.

Q. And the specification makes no mention of concrete? A. I think so. No, it may be all done in that, but I remember it called for concrete and as I understood it might be required in foundation, and therefore it was an unknown quantity and I estimated that there might be probably that quantity required in that part of the work, 200 yards.

Q. And youput down $10 for that 200 yards? A. A yard, yes, and of course I understood that if there would be say a thousand yards required, I would be paid for the full amount put in. It was different from some of the other items. I considered, because there was your plan to take out the quantities, timber and rock, but this would be an unknown quantity which the Department would pay for according to the amount that would be put in the work.

Q. Here, in the first place you undertake to build a wooden dam on the plan and specification provided which show no concrete. You do that for a bulk sum? You have attached to it a schedule of prices to be used for extra work and in it you have this item 22 "Concrete 1, 3, 5 in foundation." You contend that under these circumstances, if there were any concrete whatever, from one yard up, you would receive $10 a yard for it if the contract was awarded to you? A. Yes.

Q. So that in that respect your contract would be double-barrelled, first for a lump sum for the things shown and second for unit prices for the things not shown, which were extras. Is that your idea of it? A. Well, the only thing not shown that there was a possibility of being used in connection with the work was a small quantity of concrete as I considered it in the foundation.

Q. And you say there was positively no information whatever supplied you from which you could form any judgment as to the quantity of concrete that might be used? A. Positively none.

By Mr. Lake:

Q. Neither in the printed specifications nor verbally? A. No. In fact there was no concrete shown on the plan, and the plan was the only basis for any of the quantities.

By the Chairman:

Q. Did that item not naturally suggest to you, being an Engineer as you were, the question: What do they mean by putting concrete here? A. I understood that there might be some concrete. If you will notice on the plan they show rock, on that island at the centre portion of the dam and then they come to boulders and gravel. I considered they might strike a split in this foundation that they would require to put in concrete, perhaps do some piling and then put in concrete on top of that.

Q. Was anything said to you about building a concrete dam? A. No, not a thing, never any hinting at it at all.

Q. And if you had been told that you were being asked for a price for concrete as an alternative to the building of a concrete dam altogether, instead of a wooden dam would that have affected your price? A. For the concrete?

Q. Yes? A. Certainly.

Q. If you had information that they were going to build, as they really did later on, two large concrete dams, one across each stream, very heavy works, would it have affected the amount of your tender per cubic yard for concrete? A. Yes, certainly because I looked on that item of concrete in the tender as of very little importance, there was such a small quantity that would be required and I did not enter into the actual cost very accurately because I considered it such a small item.

Q. You did not consider what it would cost you to put cement up there or to obtain mixing machines? A. No, for instance, I did not get prices on cement in quantities.

Q. Nor of machinery? A. Nor of machinery.

Q. And a thousand and one considerations that will enter into the building of a concrete dam? A. Yes.

Q. Then I take it, that if you had been asked to build a concrete dam as far as the rate per yard was concerned, it would have been much less than $10? A. Much less.

Q. I want to call attention to another item. Take item 23, unwatering, $15,000. That of course would be a part of your bulk sum? A. Yes.

Q. And that could not vary no matter how much the unwatering cost it would not affect the total amount to be paid to you in any way? A. No.

Q. Did you make a calculation about the unwatering that would be required in order to arrive at that sum? A. Certainly.

Q. What was your thought of what would be needed for unwatering for that wooden dam? A. Situated the way it was at the head of the rapid there, with islands dividing it in two, I considered it would be more advantageous to work each channel separately to dam off one channel while you were working in that channel and let the river flow run through the other channel, and of course it would be only a temporary dam you would put in there to close off the flow into each channel while you were working in it. I considered it was the only item in the list of prices there that was an unknown quantity. I did not consider the concrete question important at all, but I did the unwatering and I thought it was the only factor in the whole scheme that was really an unknown thing to deal with. One might make an estimate for ten times that amount and still not be wrong, because it depended so much on the stage of the river. It varies from year to year. I understood they did do the work they were favoured the first season with very low water and, of course that means everything in the unwatering.

Q. Before putting in the tender, you, of course, visited the scene of the proposed dam? A. Oh yes, I know the locality very well. I pass there frequently. In fact I made surveys up to that country years ago.

Q. It has been suggested here that a wooden dam could have been built at the original without any coffer damming whatever, by floating out the piers for the foundations and sinking them on the site? A. Yes, that might have been possible.

Q. Did that strike you as possible? A. Yes, it did.

Q. In that case the unwatering would have amounted to nothing, would it? A. Not very much, in fact almost nothing. If you did not have to put in a coffer dam there was no unwatering.

Q. Apparently you, in putting in your figurers, rejected that idea? A. Yes, I did, because they called for unwatering, do you see, and I did not think they would be satisfied to allow the contractor to put in his piers unless he did unwater, because I thought they meant by that that they would require to see it unwatered and examine it themselves before allowing a pier to go in.

Q. Would it have been good engineering from a departmental standpoint to have allowed a wooden dam to be built by floating out and sinking the piers without unwatering and examining the bottom of that place? A. No, I do not think it would have been.

Q. It would not have been safe to do that? A. I do not think so.

Q. It was a great big lake with a tremendous head of water held back. As it turns out it has been almost unmanageable. You have heard since they had great difficulty on the Quebec channel with the coffer dam? A. I heard that they changed the site of the dam and instead of putting it at the head of the rapids located it part way down.

Q. On the Ontario side at one point, it is a good deal further down than on the Quebec side, but on the Quebec side the site of the present dam is not much farther down the stream than the site intended for the wooden dam. You have heard that

the coffer dam on the Quebec side went out with the flood? A. Yes, with the spring flood.

Q. Bearing that in mind and all the surrounding circumstances as known to you, you say it would not have been good engineering from the departmental standpoint, to have allowed a wooden dam to be sunk without a previous examination of the bottom and unwatering? A. Just so.

Q. And with that impression do you consider that that provision in the specification for unwatering meant that they would require unwatering? A. Yes.

Q. One of the tenderers put in the sum of $4,000 in the tender for the unwatering. If unwatering were required by the Department as you understood, could $4,000 under any circumstances be sufficient? A. Oh yes, it is possible it might be.

Q. In what way? A. Well it depends altogether on the stage of the water. In a very favourable season, that is with extreme low water, it might have been possible to do it for $4,000.

Q. Do you think that stream from side to side on both sides could have been unwatered in any season so as to have allowed a proper examination of the bottom by the Department for the sum of $4,000? A. I would not undertake it. I would not undertake it for less than the price I put in.

Q. That was your sane judgment of what it would require then? A. Yes.

Q. And from what has occurred since, you probably were fortunate in escaping at that price? A. Of course I do not know how they handled it.

Q. Assuming that they handled it right, the amount even on your offer was very small? A. I considered it was a fair price at the time for the material and labour and locality.

Q. You say that everything in a coffer dam would depend upon the handling of it? A. I mean the whole work. I was not speaking of the coffer dam, because I understood from what I saw—

Q. After putting in that tender you received your security cheque back? A. Yes.

Q. Were you ever after asked to tender in connection with the work? A. No, I thought it was a very unfair thing to do with the bona fide tenderers to change the whole plan of the work after calling for tenders, and having the deposit put up with the tenders and then changing it to a different class of work entirely. I consider that they should have called for new tenders at the time.

Q. If they had called for new tenders on the concrete work would you have tendered? A. Yes.

Q. Then you never got any intimation from the Department here from that time forth that they were going to change the work? A. No.

Q. Either change the location or change from wood to concrete or anything else? A. No, I got no information whatever.

Q. Did you ever get any intimation from anybody in any way that the tenders would be decided on ultimately and given out on the basis of the unit prices you were quoting? A. No, I never got any intimation whatever?

Q. As a matter of fact we have it in evidence before us that after accepting the lowest tender for the wooden dam and the Department deciding to change to a concrete dam, a calculation was made as to what the concrete dam would cost at the location originally decided for the wooden dam and upon quantities worked out in this way, changing from wood to concrete and calculating at the price named in the tenders for extra work, and upon the result of that calculation of concrete quantities and extra prices, it was decided to award a contract to Kirby & Stewart. Having stated those facts I want to ask you this question. Having regard to the reasons you have given for naming concrete and to all the surrounding circumstances under which you put in that tender, was that a fair measure of calculation to arrive at the cost of this concrete dam? A. Do I understand that the Department adopted the Stewart & Kirby prices given in their tender?

Q. Yes? A. And adopted their own quantities?

Q. And their own quantities, and thus they compared the Kirby & Stewart prices for concrete with the prices given by the other tenderers for concrete? A. No, I do not think it was a fair way at all of dealing with the price.

Q. Will you explain why? A. For instance, I have no idea what Kirby & Stewart's price for concrete was but they might be the lowest tenderer on that particular item of concrete and still have a price that was much too large for such a large quantity of concrete required.

Q. And would you say generally it is unfair for this reason that if you or any other contractor had known that a very large quantity of concrete was going to be used the prices quoted by each tenderer would be very much lower than they actually were for the small quantity? A. Certainly. There is another item I might mention in connection with concrete. It depends on the size and the bulk that you are putting in. Say the size of one pier for instance? You are allowed, where it is of any size at all, to float in stones in that work. They are called plums in the pudding, that is placing them properly so that they are a certain distance away from the outer edge of the wall and from each other. That is much cheaper than putting in cement, the amount of stone you are allowed to fill in in that way reduces the price, and in calling for prices there for concrete in foundation, they simply mean concrete, not any of this stone filling I spoke of.

Q. What you mean is that a price for concrete in foundation is a very different thing from a price for concrete work in piers? A. Certainly.

Q. Which may be changed very much in material and manner of building? A. Yes.

Q. Because there your entire construction is concrete and in the other case it is just a small quantity required to make foundation.

Q. There is another element that entered into it later on. The next change the Department made after deciding to build all of concrete, and making the calculation I have just mentioned, was this, that their engineers after examining the site changed the location entirely, especially on the Ontario side and that change of location involved amongst other things, a very large amount of excavation, so that in the ulimate cost of the contract the question of the price given for excavation was a very material factor? A. Yes.

Q. In the provision for the wooden dam, would excavation have been a serious matter? I mean as to quantity and having regard to its location? A. No, it was a small consideration, excavation, in that tender.

Q. As the location of the Ontario side of the dam was moved down the stream, the water shoaled very much so that in an ordinary season the Ontario side was dry at the place where the concrete dam was put. That involved a very large amount of excavation not originally thought of. Now in the building of a concrete dam in the new location, the prices quoted for excavation in the original tenders for a wooden dam, might be very materially affected, might they not? A. There were three excavations in the tenders here mentioned, common, rock and boulder.

Q. What have you given for the common, say? A. A unit price $1.50 per yard.

Q. And the next? A. $3.50 per yard.

Q. And the next? A. Boulder, $2.50 per yard.

Q. How would those prices have been affected in your mind in view of the change of location I have mentioned and especially of the fact that at low water a large portion of the work would be dry? A. It would certainly make a great difference.

Q. In what way? A. It would be more cheaply done.

Q. It would be more cheaply done? A. Yes, that is where it is dry.

Q. And the question of price would depend entirely upon how much of it was probably going to be dry, and how much would be under water and how deep the water would be, would it not? A. Well I did not consider that any of that excavation

would have been under water at those prices, but still it might be wet without being under water. That is you would be bothered with water flowing in that you would have to take care of or your men would have to work in the wet, which many of them object to.

Q. You do not consider that the excavation really done on the Ontario side at the new site would be under water? A. No.

Q. The excavation that you provided for in your tender on the wooden dam, where would that have been? A. That would be anywhere where the site of the dam was fixed.

Q. Some of it would be wet? A. Well wet, but not under water. I consider that it would all have been more or less wet but still not under water because you are supposed to unwater.

Q. Your coffer dam would be under water? A. If it was not absolutely tight, which in this case was not necessary, unless we put in concrete, for instance you would be bothered with some leakage and your work would be actually done in the wet although not under water.

Q. In regard to the change of site, and the greatly increased quantity of excavation, if you had been called upon to tender for that in the site ultimately chosen would your prices have been more? A. Yes.

By Mr. Ducharme:

Q. If in the result your calculations regarding the wooden dam had turned out to be mistaken would it have affected the total amount which the Government would be bound to pay you? A. No.

Q. Do you know the locality enough to speak of the location of the dam? A. In what way?

Q. Whether the second location would be less costly than the first location? A. Well, I would not like to give any opinion about that unless I made a special examination. I consider myself that the first location of that dam was preferable to the second.

Q. Can you say why? A. Well, in my experience I have never before seen a dam built below the head of a rapid, and I would have to know some very special reasons for putting it below the head of a rapid before I should advocate that idea.

Q. The first dam would have been built in still water? A. Comparatively, yes.

Q. I see on your tender there, the words, "White Pine," in writing. Was that put there by you? A. Oh, no, that was in already.

Q. When you received the form, the words in writing on the schedules of prices, attached to the tender, for the wooden dam, were already on the form? A. That in the first three columns.

Q. Were they written by you? A. They were not written by me, but were in when the form was supplied to me. There are two items there of white pine.

Q. The quantities of those would be shown in the plans and specifications, would they? A. Yes, that is we had to take out our own quantities.

Q. But the basis for the quantities——? A. Yes, the basis.

Witness retired.

AFTERNOON SITTING.

E. E. PERRAULT, recalled, and examination continued.

By the Chairman:

Q. You have been speaking about that estimate that you made early in 1909 for the cost of a concrete dam to be placed where the wooden dam was projected. Later on you know that the location of the dam was considerably changed, and when they

came to building the dam they put the Ontario end of it much further down the stream. You know that? A. Officially, I do not.

Q. Officially not? A. No.

Q. What do you mean by that? A. All I know is that I have been told there was such a change.

Q. You had nothing to do with making the change? A. No.

Q. Did you ever afterwards make up an estimate of the cost of that changed dam? A. I have not.

Q. Did you ever have anything whatever to do with the matter after the time when you made up the estimate of which we were talking a moment or two ago? A. No, sir.

Q. That was your last official act in connection with it? A. Yes.

Q. There had been a Mr. Matheson employed in or about the Public Works who afterwards went away to British Columbia? A. There was.

Q. Did he collaborate with you in any parts of your work of preparing those plans? A. He did not.

Q. And you never had anything to do with him in that connection? A. No, sir.

Q. You never did have anything to do with the actual working of the dam? A.I had not.

Q. And what you have said here to-day, does not describe your official connection with the matter? A. A. It does, with the exception that previous to calling for tenders, the Assistant Deputy Minister suggested that instead of a bulk sum being asked, that unit prices should be asked, and it was with that view that I sent the list of items at the same time as the plans and specifications to the Chief Engineer's Department, and I was under the impression that tenders were going to be called for on unit prices. When that was not done, the calling of tenders, I went to Mr. Robillard, the gentleman in charge of the drafting department and who had charge, I understand of the printing of the specifications and so on, and I at once drew his attention to it, and he told me it had been done as all other contracts were done. I at once reported to the Assistant Deputy Minister, Mr. St. Laurent who told me then it was too far gone, and to let it go at that.

Q. Well now you had had three or four years experience of the Public Works Department at that time? A. I had.

Q. And I suppose you had sent in plans and specifications which had been subject to tender before that? A. No.

Q. You had not? A. I had not.

Q. You were not familiar with the method? A. Well, I cannot say I was not familiar with it.

Q. Mr. Robillard has said to-day that there are three kinds of tenders which are issued in the Department. One is for a bulk sum pure and simple, the second is for a bulk sum but has attached to it a schedule of prices, which by the very words of the tender are made applicable for extra work, and the third is a unit price pure and simple, and in that third it is necessary to supply the quantities, put them in the printed form of tenders, so that the tenderers may know the quantities to which they are attaching those prices. Now were you aware that there were three forms of tender issued? A. I was not.

Q. Did you say anything in writing or verbally to indicate which form of tender was to be used? A. It was just verbally.

Q. Did you say to anybody—? A. I said to Mr. Robillard.

Q. And you sent these specifications? A. And plans, and told him what the Assistant Deputy Minister had suggested, that unit prices should be called for.

Q. Did you make him understand that a bulk sum was to be called for? A. I did not.

Q. Because you see he could get unit prices on the second form of tender, that is, unit prices with the bulk sum? A. I did not.

Q. Now in your specification, and in your plan nothing was said about concrete? A. It did not.

Q. Did you suggest yourself that anything should be put in the tender with reference to concrete? A. I did not expect putting that item of concrete in the schedule asking for a price for concrete.

Q. Did you prepare a schedule? A. I did.

Q. You prepared a schedule? A. Yes, I did.

Q. Calling for prices? A. For prices.

Q. Was the schedule that you provided the model upon which that part of the tender is signed 1908, did you provide a copy on which that schedule of prices was framed? A. Yes, sir.

Q. On which that schedule calling for prices was framed? A. Yes.

Q. There were 23 items in it? A. Yes.

Q. Two items of white pine appear to have been omitted and subsequently provided in ink? A. That is not my writing.

Q. The writing is not yours, but you think you gave a copy for the 23 items? A. Yes.

Q. If you were going to ask unit prices for a work such as this, would it not be according to practice to provide a statement of the quantities to which those unit prices were attached? A. Yes, I suppose it would be the practice to do so.

Q. Did you supply a statement of the quantities? A. I did not.

Q. You did not at that time, consequently if Mr. Robillard had desired to ask for the unit price tender he would not have it before him to show the tenderers what quantities there were? A. Until he could work out the quantities from the details which I had supplied to the Chief Engineer.

Q. In any case you had not worked out the quantities? A. I had not.

Q. If Mr. Robillard were to swear that you had not given him any instructions to get unit prices, is your recollection of the matter clear enough to contradict it? A. Oh yes, my recollection is distinct as to having told him what the Assistant Deputy Minister had also said to me.

Q. Now, can you tell me whether it is a customary thing on work such as the wooden dam as then contemplated, whether it is customary to get such a work as that by unit prices or by bulk sum? A. To my knowledge it is a bulk sum, the usual way.

Q. Had you prepared your material for a bulk sum before St. Laurent spoke to you about it? A. I had.

Q. Then his mention of unit prices was a subsequent thing? A. It was just previous to the calling of tenders by the Department.

Q. Now, can you say that he wanted to get unit prices? A. My recollection of my conversation with the Assistant Deputy Minister is that he would like unit prices on that work owing to the uncertainty of our knowledge of the foundation.

Q. Did he make any mention of his thought which he tells us he had for a long time in his mind that such a structure ought to be made of concrete and not of wood? A. No, he did not at that time.

Q. Did he ever discuss the advisability of making it of concrete? A. Afterwards.

Q. But not at that time? A. Not at that time.

Q. He did not tell you he had had in his mind to change to concrete and that it would be desirable to have the prices? A. Not at that time, not previous to our calling for tenders for the wooden dam.

Q. Well, as far as you were concerned then in putting that item of concrete, you had in mind only the very restricted use which you have described here to-day? A. Yes.

Q. And so far as Mr. St. Laurent's conversation with you is concerned, did you gather that he had only that same restricted use in his mind? A. My idea was that he wanted unit prices upon every item for the construction of the dam.

Q. Yes, but I am asking for the cause. You say it was because he thought that in view of the uncertain bottom and so forth some concrete might be needed? A. Yes.

Q. And I am asking you whether, judging by his conversation and his instructions to you at that time, you think he had a restricted and narrow use for concrete in his mind? A. Well, I cannot say that it was the conclusion I drew from his conversation. It was more that the cost might be more or less than what I had estimated it.

Q. It might be uncertain? A. Yes, uncertain.

Q. That is to say, not that the cost might be more or less, but that the quantities— A. If the foundations were to be more than what we thought they were going to be then there would be unit prices—it could be covered up by calling it an extra. If they were paid according to unit prices then the whole would appear as part of the actual tender and not be called an extra.

Q. Well, that possibility of variation arose from what cause? A. From the foundation.

Q. From the foundation being uncertain? A. Yes.

Q. In other words, you did not have before you at that time sufficient data to make you quite sure what kind of foundation you were going to get? A. Well, all I had before me was the result of the survey made under Mr. Brophy. As I told you this morning I had plans showing the soundings and the proposed formation of the bottom of the river, and upon that I made the plans for the wooden dam.

Q. But what I want to get at is not so much what you had, but what you ought to have had? A. It appears as if I had everything.

Q. Yes, then what was in the mind of St. Laurent that made him feel there was an uncertainty about the bulk tender? A. Well, it is always a work under water, something you did not see. You can never be really certain.

Q. No, but you can reduce it by careful investigation to something like certainty? A. Which is what we did, that is as far as they knew. Careful investigation had been made of the bottom.

Q. Had you made any borings? A. There had been soundings.

Q. But no borings? A. No.

Q. Are borings generally resorted to for important work? A. For a concrete dam it would be absolutely necessary.

Q. Take the case of a wooden dam across the Quebec channel especially, has not the result shown that borings ought to have been taken? A. The result shows that, as far as I am told.

Q. It has been swept away as a matter of fact by the sweeping out of the sand beneath the coffer dam? A. I understand another location from this one was proposed.

Q. A little further down. Might that change of location make a difference? A. It might.

Q. In what way? A. The wooden dam on the Quebec side was in clearer water than the concrete dam now is because the concrete dam would be in the rapids.

Q. And that might make the bottom a very different thing? A. I do not know.

Q. You are just making a suggestion? A. It might be.

Q. In any case, in undertaking a structure across a big lake like Timiskaming, should not the bottom be very carefully studied? A. It should be.

Q. I drew your attention to the plan of the wooden approach prepared by you and especially to a dotted line at the island end on the Ontario side, what does that dotted line mean? A. That the foundation, that is the excavation is likely to come

to that line. These are where the soundings, or you may call them borings, are because it was to the depth of this dotted line that I had instructions and data.

Q. Well, on the Ontario end of the Ontario side, I mean to say the island end, there is a similar dotted line? A. Yes.

Q. That indicates that the bottom there was uncertain? A. Uncertain.

Q. Now, Mr. St. Laurent has told us I think that one reason which later led him to change his mind in favour of concrete was that he noticed for the first time this dotted line on the plan as indicating that the bottom was uncertain, and he concluded from that that further examination would have to be made, and that possibly concrete should be used. In view of that evidence given by him do you still feel that at the time of the preparation of that plan there was sufficient data to warrant the plan of the dam being made and the contract being given? A. For a wooden dam?

Q. Yes, for a wooden dam. Now, will you tell me what difference there would be in the nature of data for a concrete dam as against a wooden dam if both were to in the same location? A. Well, in concrete construction you have to be far more careful as to the foundation to prevent any leakage of water. Practically you have to do the work in a dry place.

Q. Is that because it affects the concrete or what? A. Well, no, as soon as it does that it washes the concrete away.

Q. Before it hardens underneath? A. Yes.

Q. Would not there be the same danger of scouring under a wooden dam as under a concrete dam both in the same place? A. I should think there would be.

Q. Wasn't there a danger of scouring under the wooden dam as you planned it? A. I do not think so.

Q. But looking at it now, and particularly looking at the fact that you have at both ends of the Ontario side marked the bottom as uncertain, wasn't there a danger of scouring there? A. I didn't think so at the time.

Q. But suppose you had intended to put a concrete dam in that same place, it would then become necessary? A. For my personal satisfaction I would have had borings done.

Q. As an engineer, if you were going to put that concrete in that dam, in that circumstance you would have put borings there? A. Yes.

Q. And in any case, from what you have marked in this plan about the bottom there, if you were putting a concrete structure, it would be necessary to go considerably deeper than for a wooden structure? A. Yes.

Q. That would increase the concrete? A. Yes.

Q. Did you take that into consideration in making out your calculations? A. I think I did.

Q. I would like you to charge your memory? A. I have not gone over these figures, but my recollection of it is that I did.

Q. Your recollection is that in your calculation you considered you would have to go deeper down. Now, with regard to location you went you told us, too late to Timiskaming, and you saw the location that had been planned there? A. Yes.

Q. Did you approve of the location in which the old wooden dam was to be placed? A. Yes.

Q. It struck you as the right place to put it? A. In my opinion.

Q. It was practically at the head of the island, and above the rapids? A. Above the rapids.

Q. In still water, as still as a lake could be—the currents do not commence to get rapid? A. It just begins immediately below.

Q. Therefore it was in what you would call still water, as still as a lake is anywhere? A. Yes.

Q. On the Quebec side where the dam now is you say the rapids had already commenced? A. Yes.

Q. And on the Ontario side where the dam now is, in high water there would be a great rush of water? A. In high water there might be.

Q. But the Ontario side is dry in low water? A. The Ontario side is dry at low water.

Q. The Ontario side, as it was dry at low water, it has been excavated. Now where and what was the coffer damming which you intended to provide for under the word "unwatering," page 25, in the specification prepared by you? A. At the Ontario side at low water at the time, there was a very simple thing, there was practically no water, and the coffer damming would have been almost a minimum, that is in cost.

Q. That would be at dead low water? A. At dead low water. On the Quebec side, which is the deeper side, I intended to put a coffer dam from the island straight across.

Q. Straight across? A. Yes.

Q. That would be in about what depth of water? A. About six feet of water.

Q. At that spot? A. Yes.

Q. That is at low water? A. Yes.

Q. But the years when you have low water, and the length of time in each year when you have low water are uncertain things, aren't they? A. Very uncertain.

Q. And in order to have the minimum of coffer damming you would have to watch for a very favourable year and a very favourable season in the year? A. Yes, sir.

Q. That would come about what time of the year? A. In August.

Q. And September? A. Yes.

Q. Until the rains begin? A. Yes.

Q. Low water would not last, I suppose more than a few weeks at any season? A. Not much more.

Q. And there might be some seasons when you would not have it low enough for those periods? A. Yes.

Q. Certainly when the water rises, for that kind of coffer damming you speak of, even on the Ontario side, it would not be sufficient, would it? A. The Ontario side?

Q. Yes, high water? A. I think it could have been built with a little water to go over.

Q. You think the coffer dam might have been made, in other words work would be suspended? A. But the coffer dam would still remain there for the propitious time that the water would allow.

Q. If you had had a wooden dam built, and it was not quite finished, and the water ran over your coffer dam, it would not hurt it, would it? A. No.

Q. That would not apply if you were doing concrete work there, would it? A. No, because the coffer dam would do a great deal of damage to the concrete.

Q. So that coffer damming, or unwatering—the two mean the same thing, don't they—? A. Yes.

Q. For a concrete structure might be a different thing than coffer damming for the wooden dam that you contemplated? A. I think so.

Q. Now it has been suggested here by some persons that coffer damming, certainly on the Ontario side, might not have been necessary at all but that they might have flooded out the foundations, the cribs of wood, and sunk them and then built on the top of them. Did you contemplate allowing that at the time? A. I knew of it but I did not——

Q. You did not contemplate it? A. No.

Q. If you were an engineer in charge of work of that kind would you permit it? A. I would, certainly, if the occasion, that is if it could be done properly.

Q. Now, Mr. Rainboth, civil engineer and contractor, stated here this morning that such a method of building would in his opinion be highly improper, and he does not see why the Department should permit it, for this reason, that it would be impos-

sible at the place where the wooden dam was to go, with a certain amount of water there, to discover the nature of the bottom sufficiently well to justify putting cribs on it in that way. He says it ought to have been unwatered and examined and excavated enough to allow the cribs to go there? A. Well, I differ in this way, that the cribs might have been sunk in their proper place, then after they had been placed in their location, if any leakage occurred there it would be up to the contractor to make it good.

Q. You think then you would venture to allow a contractor to sink his cribs and the Department will run the risk. Leakage would occur before the contractor could be paid and get away? A. No, I do not think so.

Q. Might not the dam seem to be all right after it was finished, and develop a leakage later on by scouring underneath? A. Yes, it might take six months or a year or two. It might do that even if you put in a coffer dam, as for the time being you think it is all right.

Q. It might in any case? A. Yes.

Q. And for that reason you want to reduce the risks of it to a minimum, don't you? A. The engineer always does that.

Q. You would not be reducing it to a minimum if you allowed a contractor to take out his cribs and sink them without coffer damming or unwatering? A. The engineer would not allow it if in his mind he thought there would be such a thing.

Q. Take it in ordinary circumstances, in ordinary circumstances such as existed at that time, do you think it would have been safe practice to have allowed them to sink the wooden piers without unwatering on that side? A. As I told you a few moments ago, I did not contemplate—

Q. Such a practice? A. Such a practice.

Q. You intended to have it coffer dammed? A. Yes.

Q. And on the Quebec side where the water was deeper, a coffer dam was essential, wasn't it? A. Yes.

Q. Nobody would think of taking up the piers and sinking them? A. No. At the Quebec side you did not see the bottom at all whilst on the Ontario side a part of the dam could be seen.

Q. Putting a concrete structure where the old dam was to be put, outside of the difference between concrete and wood was a very different proposition altogether, wasn't it? A. It was.

Q. Because with regard to concrete there were a great many considerations that you would have to think over that would not apply to wood at all? A. Yes sir.

Q. Particularly those important things about the foundation of the river? A. Yes.

Q. And the character of the bottom and all that, and unwatering and so on, all these are very serious and important considerations in regard to concrete over and above wood? A. Yes, sir.

Q. Of course when it was decided to change the whole location of the dam, and bring the Ontario side away down, and bring the Quebec side into the rapids, the magnitude of that was very much greater than the old wooden dam; it was altogether different work as an engineering work? A. It is a different work altogether from the work proposed.

Q. And from an engineer's standpoint, its magnitude and importance far transcended the old wooden dam idea? A. It did.

Q. Perhaps you know, as a matter of fact, that by excavation, and in other ways, they have engineered to get five feet more of water? A. On the Ontario side?

Q. On the Ontario side, five feet more than was contemplated in the wooden dam? A. Yes.

Q. That means, does it, five feet more of the lake which can be unwatered in the dry season? A. Yes sir.

Q. I understand that the level of the water at the dam at high tide is not changed by that scheme at all? A. No.

Q. The effect of the change is merely that you can let the lake lower itself five feet more, is that your understanding? A. From the Ontario channel you allow five feet more in depth, do you see.

Q. By excavating the Ontario channel and getting the base, the platform of your dam, five feet lower, you are able to unwater the lake in the dry season that much more? A. Yes.

Q. That of course meant then that the dam on the Ontario side from the bottom to the top would be five feet more, the distance from the bottom to the top of the concrete work? A. Five feet more than the wooden dam had been contemplated.

By Mr. Lake:

Q. Have you known of plans and specifications in cases where unit price tenders are called for? A. Not for dams.

Q. But in public works generally, one kind and another? A. Not in connection with the Government, not since my work connected with the Government. I have done so but—

Q. Not since you have been in the Public Works Department? A. Not since I have been in the Public Works Department.

Q. But you did it in the case of this particular dam we are referring to? A. Yes, sir, that is, it was suggested that we should.

Q. In reference to this undertaking, did you make an estimate of what the cost of the undertaking would amount to? A. Yes sir.

Q. And in doing so, I presume, you had an estimate of the quantities of material to be used? A. I had.

Q. Had you made the estimate of quantities of material to be used before the tenders were called? A. I had.

Q. You had? A. I had.

Q. Did you send that estimate of the quantities down to Mr. Robillard? A. To the Chief Engineer, sir, I sent a detailed estimate.

Q. Of the quantities? A. Of the quantities, as well as the plans and specifications to the Chief Engineer, who then had them sent—

By the Chairman:

Q. Wait a moment, don't speak beyond your own knowledge. You simply say you sent it to the Chief Engineer? A. Yes.

By Mr. Lake:

Q. In calling for bulk sum tenders, did you ever supply would be contractors with an estimate of the quantity of materials required? A. We did not, every tenderer calculated his own quantities.

By the Chairman:

Q. You say that every tenderer calculated; Mr. Lake asked you about the practice of the Department. When bulk tenders are being called for, is it the practice of the Department to supply tenderers with the quantities which will be in that work? A. Not to my knowledge.

Q. Is it the practice then for tenderers to work out their own quantities from the data? A. Yes.

Q. That is when bulk contracts are being dealt with? A. Yes.

Q. Then in this particular case, the tenderers were not supplied with the quantities? A. They were not.

Q. They had to work them out themselves? A. Yes.

Q. You had previously worked out quantities you say, and supplied them to the Chief Engineer? A. Yes.

Q. And Mr. St. Laurent would know that? A. He would, that is I presume he would.

Q. Cannot you go further and say he would, for later on you say that the tender had been printed so far that it could not be recalled, that St. Laurent said it had been the intention to have unit prices, and it was too late to go back on it. That is the case, is it not? A. This much I can say, that Mr. St. Laurent knew that I had made my estimate in detail as far as the quantities are concerned. They were in my possession.

Q. And in the Chief Engineer's possession? A. Yes.

Q. Here is the point, at that time, even after the form of tender that was to be forwarded, if St. Laurent wanted unit prices in reality, could he not have given the quantities from the memorandum you had supplied to the tenderers, and said to the tenderers, "Now in putting in your list of prices there, these are the quantities on which you have to give these prices"? A. He could have done that.

Q. Even after the form of tender was printed, there would have been no difficulty in saying to the tenderers, "These are the quantities to which these prices will attach"? A. That could have been done.

By Mr. Lake:

Q. Was that before tenders had actually been signed? A. Oh yes, the advertisement had been published.

Q. Calling for tenders? A. Calling for tenders, and the way it was found that unit prices were not being called for was by my asking to get a copy of the printed specifications and form of tender. It was then that I drew the attention of Mr. St. Laurent.

Q. That would be between the date of asking for tenders by advertisement, and the actual signing of the tenders? A. Yes.

Q. At that time the forms of tender had not been sent out? A. I believe they were distributed to the various places. They had been printed, and sent to the various offices where the contractors could see them.

Q. When the mistake was discovered, it would have been quite possible to have had them sent out? A. It could have been recalled altogether and a new form sent out.

Q. Showing the quantities to every man who had asked for the form of tender? A. Yes, it could have been done.

Q. (Shown the tender indicating the printed list of articles, the form of tender for the wooden dam and referred to item "white pine 3 x 12" in place written in)? A. That is certainly not my writing.

Q. What other office, besides your own, would be authorized to make an addition of that kind to the printed form? A. I do not know of any other office that at the time could have done that. It was not my change.

Q. Can you explain how forms of tender should be distributed to men who wished to tender for this work, and not be all exactly similar? A. I do not know, I had not the distribution of the forms of tender.

Q. Do you not think it is a serious matter that that should be the case? A. Yes, because all contractors are in the same position.

Q. In respect to one item especially in which one tenderer placed the figure at $19,500, it does seem a serious matter? A. Of course all forms of tender should be alike.

Witness retired.

MONDAY MORNING, February 5, 1912.

PRESENT:

Hon. A. B. MORINE, K.C., *Chairman.*
R. S. LAKE, *Commissioner.*

JOHN LUMSDEN, lumberman, sworn.

Examined by the Chairman:

Q. You reside at Lumsden's Mills? A. I reside here in Ottawa. My business is at Lumsden Mills.

Q. Did you reside there in November, 1908? A. I did not reside there, my home has always been in Ottawa.

Q. You were a tenderer on the 19th November, 1908, for the Lake Timiskaming dam? A. Yes, sir.

Q. This is your tender which I now produce? A. Yes, sir, that is my signature anyway.

Q. Was the site of the dam near your mill? A. Yes, sir.

Q. Which is situated on what stream? A. Gordon creek.

Q. Consequently, so far as the dam was concerned, you would be in an advantageous position in that you could cut your timber and, if necessary, saw it to size? A. Not necessarily for that job, I intended to buy it.

Q. You intended to buy all the timber that would be needed? A. Not all.

Q. But the major part of it? A. Well, a portion of it.

Q. Where did you get information upon which to make your tender? A. I got the specifications and went at it myself.

Q. At what office did you get it? A. I think I got it at the Department. I am not sure about that. I do not know whether I got the first one from a little office across the street where Mr. Perrault, engineer, was, or whether I got them up in the Department first and went to see Perrault after.

Q. I presume you saw the plan? A. Oh, yes, sir.

Q. At Perrault's office? A. No, sir, I saw that in the Department.

Q. Then with the plan and specification you worked out your own quantities? A. Yes, sir.

Q. Did they give you any information about it except in that way? A. No, sir, I did not get any information about it at all.

Q. We are told that the plans and the specifications make no reference whatever to concrete, but in the schedule of prices attached to the tender item 22 is 'concrete 1 x 3 x 5 in foundation,' and you filled out the quantity at one thousand yards at eight dollars per yard; now, can you remember where you got the idea that any concrete was needed? A. It said so on the specification and on the plan.

Q. No? A. Well, the plan that I saw had it, because I will tell you how I got it, on the plan it showed where there was a large two-inch or two and a half inch anchor bolt and this bolt was to go down a distance into the bed of concrete between the timber piers.

Q. I now show you the plan, will you point out where that is? A. It was for to anchor that bolt there (indicating).

Q. At the bottom of each pier there is shown on the detailed plan what is called a rock bolt? A. Yes, sir.

Q. To what extent did you suppose that concrete would be required there at that rock bolt? A. It was to put that bolt into in the event of our not being where there was rock.

Q. And in such a case as that, how much concrete would you have to put around each bolt? A. I think we figured on the basis of something like the width of the pier which I believe was 5 x 6 x 3 feet deep.

Q. And if there was no rock you would put down a 5 x 6 x 3 concrete block? A. Yes.

Q. Did anybody give you any information as to the number of places where that would be necessary, or did you simply have to guess that? A. I took it to be every pier, but nobody told me.

Q. That is every pier in the water, but of course there is a portion of it that gets up on the island? A. Well, it is more or less in the water, even at that.

Q. You mean to say in high water? A. Yes.

Q. You calculated you might have to put cement concrete in that way at the bottom of each pier? A. Yes.

Q. That would be just one place at one side of each pier? A. Well, yes.

Q. That bolt is at the upstream edge of each pier? A. Yes, sir.

Q. And it is just one bolt? A. Yes, sir.

Q. And in your calculations you calculated that you would require to put one of these at each one of the piers? A. Yes, sir.

Q. There was nothing in the shape of information furnished you from which you could come to such a conclusion, except your own knowledge of the locality and your belief? A. Well, I could not just recall that because I had several conversations with Mr. Perrault, the engineer, at the time.

Q. In which you would probably ask him on this point? A. Yes, because in making out the figures, in certain interviews I got stuck and I had to get information, but I do not suppose I interviewed him over four or five times.

Q. We have examined Mr. Perrault here and he says that neither the plans nor the specifications show any concrete, and that the only place where concrete would be needed was in any cracks or intestices that might be found in the rock formation? A. Well, he is the man I got any information that I got from, which was not there. I am not prepared to say now that he said there would be concrete at each place, but I took it upon myself to safeguard myself that there would be.

Q. In any case, so far as a written or printed statement of places where concrete would be needed goes, it was not furnished? A. No.

Q. It may be of some interest to you to know that Rainboth, who was a contractor, put only two hundred yards of concrete in for that work. The successful tenderers, Kirby & Stewart, gave no quantity nor did Conroy & Conroy, of Peterborough give any quantity. You and Rainboth are the only two that gave any and you put one thousand yards and he put two hundred yards, apparently, indicating lack of precise information upon which to make a tender. The next item I want to draw your attention to is Item 23 'unwatering.' A bulk sum of $54,394 was put in your tender. By way of comparison I may mention that Rainboth had $15,000, Kirby & Stewart had $4,000, Conroy had $20,000, so that the tenders for this range all the way from $4,000 up to nearly $55,000. Will you tell us how you made out the unwatering item? A. Well, without making a short answer, from practically living there for twenty-five years.

Q. How did you arrive at the peculiar sum of being just $6 short of $55,000? A. Oh, well, that came out in this way; I always maintain that $50,000 was my price for unwatering. The other came in in fixing up the figures to $265,000 which was my bulk sum.

Q. Your bulk sum is $265,953 and when you were going on with the schedule of prices you put in that large amount for the unwatering so as to make the schedule agree with the bulk sum? Is that the idea? A. It was something in that way, I have forgotten just exactly how it occurred, but $50,000 was what I intended for the unwatering.

Q. And the $4,994 represents the difference between the two calculations? A. Yes.

Q. What did you understand in your own mind was the method of unwatering that would be required? A. Oh, to dam the river off.

Q. Were you going to put a coffer dam right across the river? A. Yes.

Q. Part at one side and part at the other? A. Yes.

Q. I presume you intended to coffer dam the Ontario side first? A. Well, the Ontario side was really dry. Of course that all depended upon the location of the dam.

Q. But in the location that was intended at the time you drew the plan and which was shown on the plan there, it was not entirely dry on the Ontario side? A. No, sir.

Q. It was in the water all the way across except on the island at very low water? A. Yes, sir.

Q. In the Ontario side there where it was intended to put the dam at that time, did you contemplate putting a coffer dam over there? A. Yes, sir.

Q. Before you did the other stream? A. No, I was going to do the Quebec side first.

Q. Why was that? A. Well, I thought it could be handled to better advantage.

Q. Were there any special reasons for that? A. Well, partly as the water was very low that year.

Q. That was in the fall of 1908, when you were tendering, when would you have done that work? A. Right at once.

Q. That very autumn? A. Yes, sir.

Q. Then, in taking the Quebec side at that time and in that way was it merely because it happened to be very low water that year? A. Yes, sir.

Q. In putting your coffer dam across there, how would you have unwatered the lake while the work was going on? A. Through the Ontario side.

Q. Would it be necessary for you first to do any excavation on the Ontario side? A. Yes, sir.

Q. And to take away that part of a bar which existed there? A. Yes, sir.

Q. Would you have done that at the same time that you were unwatering? A. Yes, sir.

Q. Would you have done that by simply taking the narrow channel through the centre? A. My intention was to put a couple of steam derricks up there with a long boom and to take the boulders up and save them for filling and take them off and let the water do the excavating.

Q. What would happen then? A. When I dammed the Quebec side, that would raise the water and it would go through that side.

Q. As you kept on building your coffer dam across, the water would be rising on you all the time? A. Yes. It would have scoured it out.

Q. In your contemplation you would have that coffer dam across the Quebec side in a short time? A. Yes.

Q. What time would you allow ordinarily to have done that? A. I was going to allow three months to do that.

Q. The coffer damming? A. Yes.

Q. Would you have gone on to build the dam proper during the winter? A. Yes, sir.

Q. Would you have done the necessary excavation and put your dam over there? A. Yes, sir.

Q. Then, in the spring, where would the water go; would it go over the Ontario side, or would you be ready with your dam to let it go through on the Quebec side? A. I would have to be ready with the dam.

Q. When does high water come there? A. That is hard to say, sometimes I have seen it as early as the 15th of May, and in other years it has been the 15th or 20th of June.

Q. Even so, $50,000 for that coffer dam, unless you were providing for contingencies which you feared, would be a pretty large amount; did you have anything else in view? A. No, sir, that would not have been a pretty large sum.

Q. From the figures which have been given by various witnesses here, I should think it would be, unless you had some specially powerful dam in view? A. No, sir, it is a hard site to build a dam at.

Q. In what way? A. Well, it is a hard thing to control the water. It is a hard thing to get that coffer dam in. As a matter of fact, every time I see the proposition, I shake hands with myself and say: Well, you are one fortunate sucker, anyhow.

Q. As a matter of fact the result has shown that you were right in believing that it was a very hard proposition? A. Yes, sir.

Q. But many men are wise after the event, and to some extent you see you are wise after the event, still from your knowledge of the matter you had more wisdom than the others and you knew it was a difficult proposition? A. Two of the contractors never saw it. Well, I might say that Rainboth has seen the place in a casual way. As far as the other contractors were concerned, they depended upon the specifications and the plans, I think. They seen it, however, when their tender was in, because I took them up there personally myself and showed them all around.

Q. Do you mean Kirby & Stewart? A. Yes, I took them over the rapids in a boat with Mr. Perrault and Mr. Stewart, but, previous to that, they had never seen it and I think they felt pretty shaky when they had seen the place.

Q. Is it not an astonishing thing for people to contract for work of that kind without ever having seen the place? A. I think they depended altogether on the information.

Q. From the nature of your business, you are a dam builder to some extent? A. Yes, sir, I have had some experience of it.

Q. You have to build dams in the lumbering business and you know the difficulty of the work? A. Yes.

Q. And then you were very familiar with the Timiskaming? A. Yes, sir, particularly.

Q. Had you any general knowledge of the dam on the Quebec side? A. I went down there in a boat and we sounded and all that kind of thing. I knew it was a boulder bottom and we made some tests. We took and put an auger on the end of it and we put that down in between the boulders looking for rock to find out how far we would have to go before we struck rock foundation.

Q. Did you get the rock foundation? A. No, sir.

Q. The result has shown, not only that it is a boulder bottom but that the boulders were embedded in sand, and that along that slippery sandy bottom the scouring is continually taking place? A. There has been scouring in some places.

Q. You anticipated that to some extent? A. Yes, I was afraid something of that kind would take place.

Q. But, as a matter of fact, the work was not started until when? A. The following spring. Well, pardon me, you said "work," of course there is a difference between the work and the men getting on the site. The contractors were there anyway previous to the first of June, but work actually did not start until some time after that.

Q. The Ontario side was done first? A. Yes, sir.

Q. It was not until the fall of 1910, or two years afterwards, that they started to put the coffer dam across the Quebec side? A. Yes.

Q. In the spring of 1911 it went out? A. Yes.

Q. And in the spring of 1911, the water was more than usually high, was it not? A. No, sir, it was higher in Lake Timiskaming due to the dam being in, but if the dam had not been there it would only have been ordinary water.

Q. Was not the channel on the Ontario side by that time sufficient to carry off the usual extra water? A. No, sir.

Q. The water would still have to rise considerably in Lake Timiskaming to make it flow off very easily through the Ontario side? A. I do not think you could fix it any way so that it would flow off through there and be anything like normal.

Q. You think that the dam there now on the Ontario side, no matter how it is fixed, is not capacious enough to carry off the extra water? A. I do not think so, but I am not an engineer. These fellows that are engineers can calculate how much water will run in a minute and how much space it occupies and so on, but from my looking at it, it does not look as though it would do the work although it probably will.

Q. The original location of that dam was changed? A. Yes, sir.

Q. And on the Ontario side the dam was carried well down? A. Yes.

Q. And on the Quebec side it was carried down somewhat? A. Yes, sir.

Q. And on the new site on the Quebec side, is it at the beginning of the rapids? A. No, sir, it is down the rapids, a matter of perhaps a thousand yards.

Q. So that until the thing is coffer dammed across, the water would be very rapid there? A. Yes, sir.

Q. Would that affect the scouring action along the bottom very much? A. Well that all depends on how much boulders have been disturbed. If they have not been disturbed it should not affect it. It has been there for centuries.

Q. But I presume the building of the coffer dam itself would in some sense disturb the boulders? A. Why so?

Q. Have you not to keep driving into the bottom under the coffer dam? A. There are boulders there that are half the size of this room, and the setting down of the dam on that, I do not see how that would scour it.

Q. But between the boulders, would not the dam to some extent be disturbed? A. Oh, well, those boulders are pretty tight together.

Q. And the coffer dam is just being set on the boulders? A. Yes.

Q. Then, of course, the actual excavation from the main dam itself would be considerably down stream from the coffer dam? A. Yes, sir.

Q. And, disturbing the boulders there for that purpose? A. Oh, that would scour out.

Q. Would it scour out as far as the coffer dam behind? That is a very important question, is it not? A. Yes, but I do not know how you could get them started, and come back one at a time.

Q. I understand they are having great difficulty in getting the coffer dam built tight? A. Yes, sir, I was there on Saturday.

Q. Was the coffer dam tight on Saturday when you saw it? A. No, it is not absolutely tight.

Q. Are they going on with the excavation of the site for the main dam now? A. Well, they are trying to get it dry, they are excavating on the extreme north of the Quebec side.

By Mr. Lake:

Q. Are they likely to get it completed before the spring, if all goes well? A. Well, I cannot say.

By the Chairman:

Q. When the spring freshet comes, if the Ontario side is not sufficient to carry off the water it must come over the dam on the Quebec side? A. Yes, either that or blow it out.

Q. Before that time the foundation for the main dam and some of the piers ought to be in? A. I do not think it is possible, sir.

Q. Then, what would be the natural effect of the rush of the water through the Quebec side on the work that has been done on the main dam? A. Well, it is going to dig it up more or less; I guess they will find it full of sediment again.
